WHY IS C. E. JENNINGS' NEW AUGER BIT No. 1½

THE BEST BIT FOR WOOD BORING IN THE WORLD?

Because: There are good bits made for hard wood. The L'Hommedieu Ship Bit is an excellent tool for this purpose, but it is not designed for fine cabinet work or soft wood. There are good Bits for Soft Wood, but fail when used in hard wood We have combined two principles in one, and think we have solved the problem of putting a bit on the market that is suitable for all around use. Price-lists and samples furnished on application.

MORRILL'S

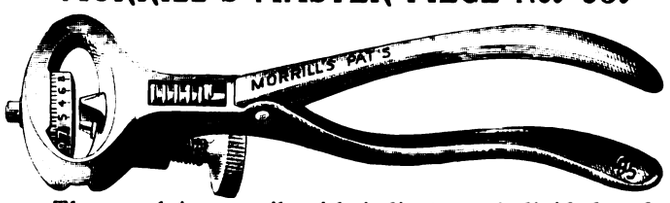
Saw Sets, Bench Stops, Punches, Cutting Pliers, and Seal Presses.

REGISTERED
U. S. PATENT
No. 30572.

TRADE
MARK

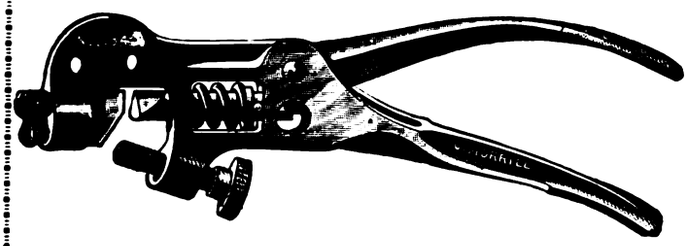
REGISTERED
U. S. PATENT
No. 30572.

This Trade Mark is stamped on all Saw Sets and other Hardware Specialties of my make.



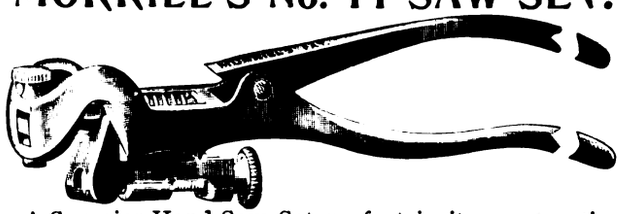
MORRILL'S No. 1 IMPROVED.

Known as the New No. 1 Saw Set.



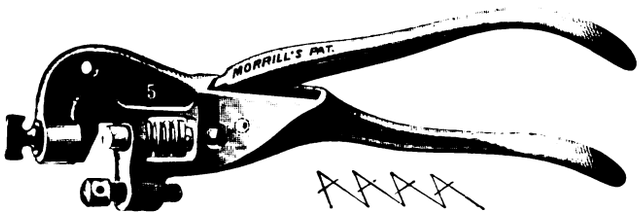
For Hand, Band and Jig Saws, from the widest made down to ½ inch. The Sets are too well known for me to enlarge on them.

MORRILL'S MASTER-PIECE No. 95.



The revolving anvil with indicator sub-divided and marked with figures, the figures showing the number of teeth to the inch in the saw to be set; for example, if the saw has four teeth to the inch, turn the anvil until the figure 4 comes up directly in front of the plunger, and so on.

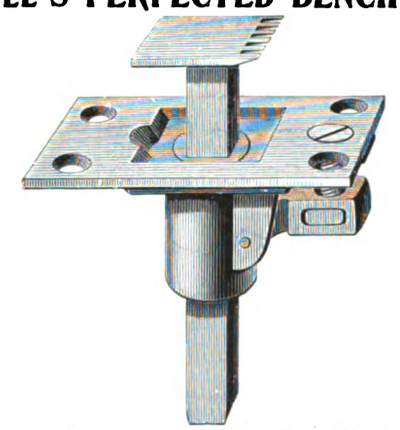
MORRILL'S 3 and 4 SAW SETS.



No. 3, Cross Cut and Circular, single tooth, from 14 to 20 gauge. No. 4, Cross Cut M and Champion Tooth, from 14 to 20 gauge.

MORRILL'S No. 11 SAW SET.

A Superior Hand Saw Set perfect in its construction and unerring in its operation; will set any hand-saw from 1-16 inch thick down to the thinnest made, and from the coarsest to the finest in general use.



MORRILL'S No. 5 SAW SET.

15 Inches in Length.

For Timber and Board Saws, from 6 to 14 gauge. The size of the saw in circumference makes no difference.
These sets are made strong, accurate and durable.
Saw teeth should never be twisted, but set at right angles to their points, as shown above.

MORRILL'S PERFECTED BENCH STOP.

No wood worker can afford to do without a reliable Bench Stop or hook, as it is sometimes called. The end that the screw is in should always be toward the operator. The spindle and working plate is of WROUGHT STEEL. The body is of malleable iron, rendering it the most durable and useful Bench Stop ever put on the market.

Write for Catalogue and obtain a complete list of specialties from which the few cuts above have been chosen.

Cowles' Hot Air Stove
—THE—
"NEW TROPIC."
Manufactured by
GEO. B. SCOVILL,
. . . WATERBURY, CONN.

Fig. No. 1.

Fig. 1 represents the Stove complete in which we employ a hot air chamber around a cast iron fire pot, as illustrated in Fig. 2, for the purpose of heating air in which cold air drawn from the floor of the room may circulate through the lower row of holes, into the heating chamber in contact with the hot walls of the fire pot and pass in a heated condition into the room through the upper row of holes, thereby giving an intense heat and at the same time effecting a great economy in the quantity of coal consumed. This circulation also keeps the air fresh and pure.

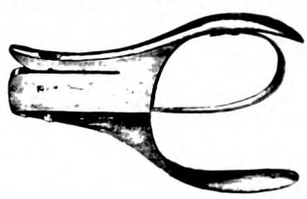

Fig. No. 2.

We claim for the "NEW TROPIC" that our patrons can get three times the amount of heat that can be obtained from the old-fashioned brick lined stoves, **as two-thirds of the coal is consumed in forcing the heat through the brick before any benefit** of heat is obtained in the room. Try one and be convinced that you will get the most wonderful heating stove of the age.

IMPORTANT IMPROVEMENTS ARE NOW IN PROGRESS FOR THE COMING SEASON.

"EVERYTHING IS COMING UP."

BUSINESS IS BETTER AND THERE WILL BE A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.

Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.

Pearce's Improved Cahoon Patent Broadcast SEED SOWER

Is as much superior to any other device for sowing grain as the modern electric light is better than a tallow candle. The **CAHOON** is not the lowest priced seed sower, but taking into consideration the durability of the machine, the ease with which it is operated, and the quality of its work, it is the cheapest. Pays for itself every day that it is used. Sows all kinds of grain and cleaned grass seed; does five times as much work as can be done by hand with two-thirds the amount of seed, and does it better than it can be done in any other way.

Dealers who handle the **CAHOON** make a profit and a satisfied customer at the same time. They stay sold. A prominent Hardware dealer in the South wrote us under date of February 13, '99: "We are not handling any other broadcast seeder similar to yours. Tried this some years ago and got enough of it."

Retail dealers supplied at factory prices promptly by our wholesale agents at all principal distributing points. . . . . .

THE TOLER

Liquid Door Check and Spring.

PERFECTION ATTAINED AT LAST.

Entirely new in style and mechanism, **strong, simple and effective,** giving in results all the best achievements of other checks, together with new and valuable features only to be found in this.

It has a vertical case, with openings only at the top.

It has no plugs or caps screwed to the cylinder ends It cannot leak. There is no way for the liquid to escape after the Check is applied.

The piston is idle during a greater part of the opening and closing of the door, thus saving the wear on all parts.

It is made of the very best of material throughout.

It works to perfection, closing the door quickly and gently.

It is easily taken apart by anyone; no returning to the factory for anything. This saves time and money. The working of the Check will speak for itself.

Regular finish, Gold Bronze. No extra price for Silver Bronze or Dead Black when so ordered. Furnished Plated in Brass, Nickel, Copper or Silver, Plain or Oxidized, at a reasonable extra charge. No extra charge for Brackets where needed.

Hopkins' "Handy Notes and Queries."

Digitized by Google

ANNOUNCEMENT

. . . . . Many Retail Hardware Dealers have informed us that when they order Star Hack Saw Blades from the jobbers their orders are filled with imitation goods, which will not do the work. By this means our saws get a bad name where they had a good name before. We do not object to our esteemed customers selling any saws they have a mind to, if they do not represent that they are filling orders with Star goods. If our Blades get fair treatment we will take the chance of their cutting their own way.

If Dealers, who cannot get what they want from their Jobbers, will notify us we will send them the address of some one near by who will furnish genuine goods, or failing in that, we will send the saws from New York at not above jobbing rates.

More than Jobbers or Retailers, in the last analysis, the men who use the saws will settle the question of what shall be sold.

198222

"Hardware Jobbers' Number."

The success attending our "Hardware Association Number," of April 10, 1898, was a guarantee to the trade that whatever *Hardware* promises to do, it does in good faith to the very spirit and the letter.

That number was the handsomest, most artistic, and most successful representation of first-class Hardware trade journalism, that was ever published, and praise and congratulations poured in from our friends, from all quarters of the globe.

It is certainly no stretch of the truth to state that the special "Hardware Jobbers' Number," which finds its way into the hands of the trade to-day, is in all respects equal to the publication of last year.

Hardware on this 10th of April, 1899 completes the ninth year of its existence. Its history is known to all. It came into life because there was an unoccupied field awaiting it. The success which attended it from the first, is a visible proof of the fact that the trade had practical use for a journal of this character. It has endeavored to be useful to its constituents; to be fearless in the expression of its opinions; to give the news of the trade, and all the news, without bias or concealment; to foster, so far as lies within its power, its best interests of the trade; to represent the markets as they are; to keep in touch with the live questions of the day, and to become, in a word, a live progressive, independent representative of the Hardware trade of America. The generous endorsement and support which it has received from all quarters, lead us to the belief that it has, in a large measure, been able to fulfill this ambition.

In choosing for the special anniversary number of this year the subject which has been selected—the Hardware Jobbers—we feel that we have provided, for the thoughtful consideration of the trade, a theme which is now presenting problems upon which many of the best minds in the trade of this country are and have been for some time, devoting themselves. The discussions which have occurred recently in the various annual meetings of the large and small jobbers' associations of this country, the questions which have been raised in the public press, and in the minds of many thoughtful men, as to the present status and future outlook of the jobber, whether in the Hardware or other trades, have led to the choice of this theme, as one full of vital moment to the trade, and to the country at large. The importance of this subject is evinced in no better way, than in the fact that a large number of the busiest Hardwaremen of the country have been willing to devote their time and labor, to the preparation of a number of very valuable and interesting special articles for this issue, bearing upon questions which affect the very life and existence of the Hardware Jobber. It is with no small degree of pride and pleasure, that we lay before our readers these many articles from the pens of such busy men, and we know that a perusal of the same, cannot fail to be of benefit to each and every member of the trade, whether his interests lie akin to those of the jobber, the manufacturer, the retailer, or the consumer.

No trade journal could present to its readers an array of articles like those above referred to, without a feeling of special pride and self-congratulation upon the number and character of its friends. When a man as busy as William W. Supplee, ex-president of the National Hardware Association, prepares for its columns an article as thoughtful, as earnest and as full of valuable information as is found in his communication elsewhere in this issue, it is a guarantee that he regards the occasion as one of special importance, and certainly has some measure of appreciation of the character of the channel through which he expects to reach the trade. Mr. Supplee is a thinker and close observer, as well as a man of shrewd business acumen, and speaking as he does from a life of active experience in the jobbing trade, his views must certainly command attention and respect.

Among the other articles to which attention can be called without an invidious distinction, are those from the pens of H. H. Bishop, president of the National Hardware Association, in reference to the present condition and future outlook of this great organization; the views of T. James Fernley upon various themes of importance to the National Association and the trade; the papers of Brace Hayden, H. C. Rushmore, George T. McIntosh, Charles H. Turner, Leon C. Carter and James D. Moore, upon the jobbers and the jobbing trade of their respective geographical sections of the country; the papers of James D. Foot, John Bindley, H. P. Davidson and J. H. Smith, upon the relations

Digitized by Google

which exist between the manufacturers and jobbers on the one hand, and the jobbers and the retailers on the other; the article of Charles W. Emery on net prices; that of C. B. Lockwood on the ethics of the Hardware business; that of James R. Nutting on the ever-present and practical question of packing and cartage; and very many others of like value and importance from the pens of J. B. Comstock, Alfred P. Shannon, C. S. Van Wagoner, Alfred D. Clinch, Thomas E. Oliver, etc. The mention of these special articles is simply for the purpose of illustrating the wide scope and value of the questions discussed in this issue, and are suggestive of others of equal value which we have not space to name. To each and every one of these gentlemen, *Hardware* extends, on behalf of itself and the trade, a formal vote of thanks, for the interest which they have shown in the preparation of this number, and the time which they have taken for the discussion of the various vital questions which affect the trade.

Another feature of special interest is the presentation, upon three pages of this issue, of the portraits of *Hardware's* staff of correspondents. These gentlemen are known to fame wherever *Hardware* reaches, and our appreciation of the services which they render in each successive issue, is more fully expressed on another page.

It would be an act of thoughtless ingratitude upon our part, to place upon record the above acknowledgments, without an expression of our appreciation, to the fullest extent, of the manufacturers, jobbers and others, who have aided us in making this present number so great a success, when viewed from a more material side of trade journalism. There never was a trade journal published in this country, or anywhere else, that presented a choicer and more attractive array of advertising pages than is shown in this number. The responses of the trade have been of the most generous character, and this number alone furnishes an eloquent object-lesson to the world at large as presenting a great variety of Hardware articles manufactured in America; and it would be difficult to designate which theme should be touched upon with the warmest eulogy—the enterprise of these advertisers or the artistic manner in which their cards have been prepared, and are here displayed.

As a fitting conclusion to the above, we may be permitted to say, that the management of *Hardware* appreciates in the highest degree the efforts of its friends, which have been so generously extended, not only in the preparation of this special number, but also in the support which has been given from the very beginning. The most fitting acknowledgment which can be made, lies in the promise that thus encouraged, *Hardware* will endeavor to be even more useful to the trade in the future, than it has been in the past.

Fraternity in the Jobbing Trade.

Editor Hardware: When in the year 3875 B. C., Tubal Cain opened his Hardware store, he enjoyed what every Hardwareman since has longed for—a monopoly in his line. He had no fierce competitors and every one was welcome to his hut or warehouse for he feared no danger of spies looking for brands, that Tubal, because being an authority, was a guarantee must be good if he carried them in stock. He fraternized with the entire Hardware community, which was himself, like Lord Dundreary's gallinaceous bird with one wing. He was the father of trade fraternity.

The relations between the jobbing trade of the various sections of our country have undergone a very decided change during the past forty years. Before the civil war the relation between the North and South was almost entirely of a commercial character, and the traveling salesmen to cover the Southern section were of Southern proclivities. Now this has been changed and the Yankee is a welcome visitor in the rice and cotton sections. No one factor has been so potent to bring a fraternal feeling between all sections as the Hardware Club of New York, the incorporators of which believe it to be the home from which have gone out the progenitors of all Hardware trade associations organized in the United States, and which has stimulated the organizations of similar character among our British cousins.

Feelings of fraternity led to the formation of the Hardware Club, and its phenomenal success brought about the National Hardware Association of the United States, which has auxiliary groups covering the various divisions of the trade. Not content with the parent organization each jobbing section of the country has been cemented in separate bands, and not content with this progress each large city now has its local society. These are all formed for one object: the alleviation of the sufferings of the average Hardware jobber. That the end sought has been achieved is proven by the reports all render to the parent at the annual convention. The mythical guerrilas of the past have all disappeared, and now the colonel of the South greets the private of the North on equal terms. Tangible proof of the new era of fraternity was lately exemplified in the presentation to Mr. William W Supplee, by the National Hardware Association, of a service of silver as a tribute to his fostering work in behalf of the good for the entire jobbing community of the country. More recently we saw it again expressed at the dinner tendered the beloved ex-President of the Hardware Club, Mr. Peter McCartee, by its Board of Governors at which time they took advantage of the opportunity to present him a token of love and esteem, in the form of a silver salad bowl and spoon.

The Hardware trade of to-day is not devoting its energies on post mortem honors, but is spreading its rewards in the offices at its command. The presidency of the National Association carries with it proof of confidence and esteem of its members, and the position is worthy the ambition of any member of the trade, and he who reaches the goal is honored. Likewise the presidency of the Hardware Club of New York is worthy the honorable seeking of any New York jobber, for the office has been exalted by the two former incumbents, Mr. William H. Williams and Mr. Peter McCartee, and by its present holder, Mr. George H. Sargent.

Who will say that Fraternity in the Jobbing Trade does not exist to-day? Let any one who is a sceptic visit the New York Mecca of Hardwaremen and have the delusion removed, for he will see gathered at its tables the greatest and fiercest competitors whose competition has been turned into more honorable channels, because they have learned to know each other better, and are approaching the commandment "If ye fulfil the royal law according to the Scripture, 'thou shalt love thy neighbor as thyself,' ye do well," and the carrying out of this creates Fraternity.

New York, April, 1899. ALFRED D. CLINCH.

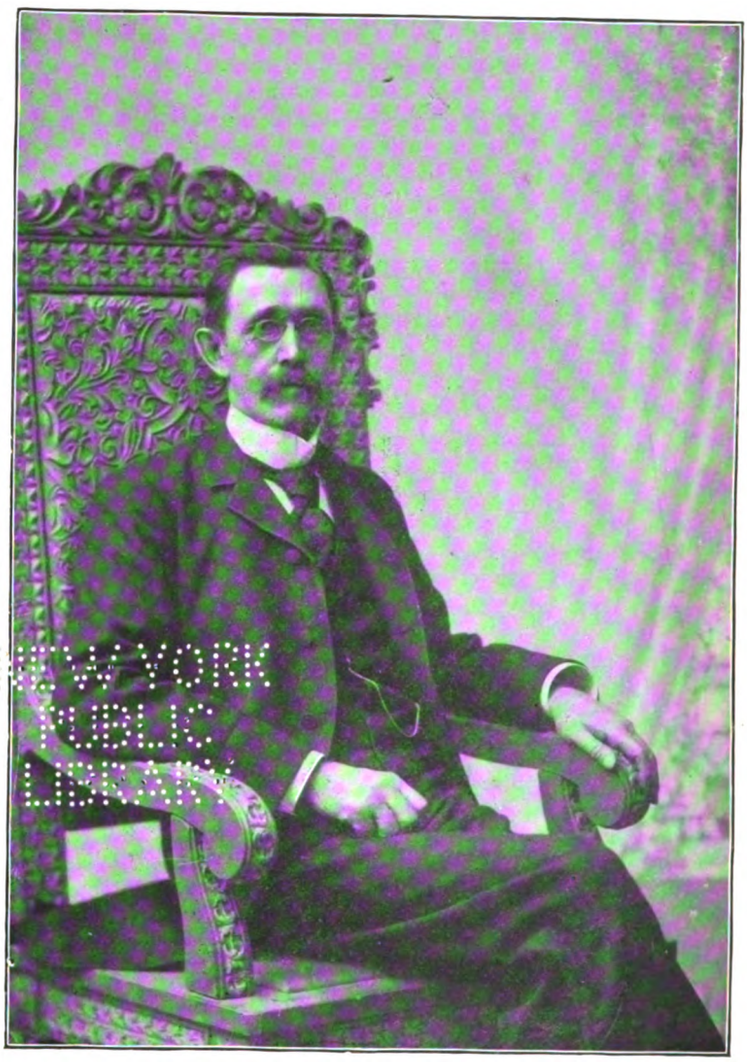
MR. SUPPLEE ON THE JOBBERS' FUTURE.

Editor Hardware: The subject upon which you have asked me to write is: "The future of the Hardware Jobbers, and of what advantage are they to the Retail Merchant?"

In treating upon this subject I will for convenience sake use the personal pronoun, and for the same reason ask permission to use my firm name (which I have always heretofore avoided) in making statements and illustrations, in order to show why I arrive at conclusions, and having had experience and supervision in both retail and wholesale business I propose to treat the subject so far as possible from an unbiased standpoint.



I could never persuade myself to indulge in either day or night dreams of speculative theory, or superficial conclusions, and while it is but natural that we should accept experience as a guide we should not permit ourselves to be chained to it and thus prevent schooling one's self to the ever changing conditions of mercantile progress. The subject is one naturally quite near to my heart, and I may accept the request made by you in two different letters that I should not be over-modest but use all the space that I desired.

My first experience of eight years in the retail Hardware business was in a location and at a time where the opportunities to mingle with the consumers of both farming and lumbering districts were of no small character, and I have been frequently asked the question if again in the same position would I desire to see all the jobbers retire from business and depend upon making my purchases from manufacturers? My answer, based upon experience would be that the question is entirely theoretical, and were it practicable it would not be desirable. Doubtless all jobbers have occasionally come in contact with an occasional dealer (as the writer has) who may have entertained the very comfortable feeling that he can purchase $50 to $100 worth of goods from a manufacturer as cheaply as the jobber can buy during the season variously from $1000 to $10,000, and in some instances (depending upon the kind of goods) as high as twice or four times $10 000. Taking, therefore, a practical view of the case, is it reasonable? If reasonable (which I do not admit) why stop there, why should not the average manufacturer reach the retailer's most desirable customers, the consumers of the country, upon the same basis?

But, says the retail merchant, some manufacturers state they will sell me as low as they will sell any one. Tacitly, yes, practically, no. If he be a conscientious manufacturer he will sell you as low as he will sell any one that given quantity of goods, but is it reasonable that he would sell you as low as he would to a distributor through your similar channel ten to fifty times that amount? Therefore, a mental reservation of the manufacturer is naturally to be expected.

There are distinctively four classes of trade engaged in the manufacture and distribution of Hardware and its corelatives, the manufacturer, the wholesale dealer (known as the jobber), the retail merchant, and the consumer or user. Each have their distinctive sphere and vocation, their interests are mutual, and any attempt to disarrange or disconnect them has always ended in demoralization and tangled them into an unmanageable mass.

We all know that reducing lost motion to a minimum is an art much to be desired, and any factor which will aid in this is a benefit to the real merchant, as the very nature of his business requires all the possible time he can give it, giving him the opportunity of coming in personal contact with his customers, the consumers. A certain amount of time must necessarily be devoted to buying his goods, familiarizing himself with the market and prices, which is reduced to a minimum in making his purchases from say three or four jobbers, or distributing houses, instead of giving a large portion of his time to representatives of say from 300 to 500 manufacturers, who may from time to time, from week to week, or day to day call upon him, all of whom should be courteously treated. That number

WILLIAM W. SUPPLEE

may appear large to the average merchant, but the writer's own ledger shows purchases from nearly 1,200 firms. Through this channel (the jobber) the retail merchant is able to receive condensed information of the styles, quality and prices of many hundred representative lines of goods in a very short space of time, resting safely in the belief that through this channel he can secure goods at no higher price than he would pay if he were to buy from manufacturers an equal quantity of goods. If for no other reason, the competition of the jobber prevents unreasonable or arbitrary prices.

The business of a large wholesale house demands different treatment, the buyer or buyers must come in touch with the entire market and the manufactured product of the country. Buyers are selected for the various departments who have a degree of experience and intelligence,

Digitized by Google

and who are able to carefully select goods suitable for the needs of the trade. The buyer in the department of pocket and table cutlery, like his other co-workers, has a difficult task to perform. He must compare the various samples with styles, quality and prices, making purchases and keeping his stock in condition for immediate as well as future sales. Upon examination I find upon the pocket cutlery record book of one year ago that over 1200 dozen American manufactured Barlow pocket knives were ordered with instructions to send them as soon as made. I find after that order had been in hands nearly three months not one-half of them had been received, and further find on the record for the same year 2000 dozen American manufactured pocket knives ordered as early as August for the next spring's trade, not all delivered in six months, and find 1000 gross of table knives and forks ordered in September of one year from the coming spring trade not all completed until the middle of December, and find over 2000 dozen Wostenholm & Son's imported pocket knives, averaging $7.00 per dozen (with duty added) ordered nearly six months in advance of the season in which they were needed. Other pocket knives, both English and German, are ordered correspondingly early.

Other departments act and suffer correspondingly. I am this moment reminded that about a year and a half ago an order was given out early in the Fall for one car load of hames. The season was unusually active, and the order was not sufficient to carry us through and additional orders were placed. In these there was a delay, the manufacturer in his letter stated that unless the jobber ordered these goods in advance of the season to be made up to order it would take shed room, which would cover the entire bottoms of his town in order to carry a sufficient stock to supply the demand for the current season, winding up by saying that the jobbers of the country should anticipate their full wants.

Orders for one million ordinary carriage bolts, one million Eagle carriage bolts, or one million tire bolts, must be given three to six months in advance of the season in order to insure prompt delivery. Nor is an order of from one to five hundred barrels of strap and T hinges an unusual specification, coupled with instructions that one to two car loads at a time be shipped during the season. Orders given for fifty thousand pounds of wire nails in packages are liable to remain in the manufacturers' hands for sixty or ninety days before full shipment is made, and although the combined manufacturers of the country have machinery enough for manufacturing more screws than can possibly be consumed in our country, orders for from 100,000 to 500,000 gross frequently remain in manufacturers' hands from sixty to ninety days before specifications are completed. Trace chains are contracted for as early as July to September, and in order to insure positive delivery are frequently bought from two or three manufacturers. Cross-cut saws are usually ordered six months in advance of the season to insure delivery. Orders for builders' Hardware and goods known as general shelf Hardware, covering volumes, are made out with care three to four months in advance of the season.

I will later on treat of the difficulties that a retailer would have encountered had he changed his source of supply during the depressed trade of the recent past, but for the present will treat on the immediate prosperous year, and the average retailer has no possible knowledge or conception of the difficulties that surround the jobber at the present time, further justifying the judgment of depending upon more than one manufacturer. We have reached a season when trace chains are needed by the consumer. Not nearly two-thirds of the orders given in July to September have been completed. Manufacturers cannot obtain wire, and had we depended upon one source of supply only, one can imagine the dissatisfaction of customers. The same may be said of poultry netting, where at this date twelve thousand rolls have been shipped, but we are now suffering and are likely to suffer from the delay of many more thousand rolls yet undelivered. The same may be said of green wire cloth, and the manufacturers of window screens must suffer from the sales beyond the production of green wire cloth, while several car loads have been received orders cannot be completed until additional car loads arrive. Rakes, forks, garden, cotton and planters' hoes specified for as early as October are not fully executed, and no orders can be placed at the present time with any positive assurance of delivery in time for trade. An order placed for 3500 dozen shovels long before the recent advance was anticipated was returned by the manufacturer, saying that it was simply impossible to supply the goods in time named for delivery. If the jobber sells two, three or four makes of files he must place specifications in hand with each for from 3000 to 5000 dozen or over (as the case may be) far in advance of his wants. I could extend these illustrations to an almost unlimited extent, but rest assured that the average manufacturer could not so conduct his business as to make it possible to supply the quick demands of say twenty thousand or upwards retail dealers scattered over this vast country, without constituting himself a jobber, and not then unless he arranged to carry a stock equal to the combined jobbers, and then only at an enlarged expense account providing he markets his own goods exclusively. The expense of conducting business in this manner would average variously (depending upon the lines) from 12 to 25 per cent. upon his output, which must necessarily be added to the cost of the goods. Therefore the consumer would naturally suffer to that extent, but no jobber could conduct his business and retain his trade at one half the minimum traveling expense above stated.

Many of my fellow jobbers will remember (and those who attended remember with pleasure) that on January 17th, 1875, Henry Disston gave an entertainment, extending his invitation to all the firms of jobbing houses in the country. During the evening I was seated with the head of the firm of a large western wholesale house, whose business at that time was about half a million dollars (another western house had also reached fully that amount). We discussed the future of the Hardware jobbing trade, and whether the maximum trade of the jobber had been reached, arriving at the conclusion that it had not been, but that it was in its infancy. Since that date the business of the house referred to has grown from half a million dollars to from six to eight million (the other house referred to to fully an equal amount) and the writer's business has far more than quadrupled. During the interim a large number of wholesale houses scattered over the North, South, East and West have come into existence, whose probable trade is some of them more than equal to, and some one-half the first named amount.

Many of these jobbers are not infrequently the financial backers of the manufacturers, making their purchases far in advance of their anticipated wants, paying for goods promptly, taking advantage of the cash discount, and the manufacturer is thus put in possession of funds with which to pursue further business. Therefore, if there have ever been any reasons why the jobbers of this country should exist, and why they are of advantage to the retail merchant, these reasons have increased four-fold.

Taking the risk of repetition I will repeat what I stated at the annual meeting of the National Hardware Association, (while president of that organization) that there came upon my desk a journal in which certain views concerning the future of the Hardware jobbing trade were presented. Simultaneously with the receipt of the journal the morning's mail came before me, curiosity prompted me to investigate in detail some of the orders. In one case there were twenty-three different items, and no two articles made by any one manufacturer. In one order of forty items no

Digitized by Google

three were made by the same manufacturer. Other orders were equally suggestive. Since the date of your letter many orders have been examined for the same reasons, and we have found that in many orders coming from salesmen of two or three pages no three articles could be had from the same manufacturer. These are not isolated cases, but of daily occurance.

Therefore, imagine, if you please, the retailer distributing his orders like the scattered fire of the blunderbuss, selecting his goods from the many illustrated catalogues issued by some of the jobbing houses of the country covering over 1000 pages, and in a catalogue of nearly 1500 pages issued by our firm a few years ago we could add 300 to 400 additional pages and then not fully illustrate and classify the stock which it is necessary to carry in order to supply the quick demands of trade, and through this channel (the jobber) the retail merchant is able to keep in touch with the market, add to his purchases each time some few new goods, and thus enlarge his scope and increase his trade. But unfortunately, and with all due respect to the intelligence of the average retail trader, I state without fear of contradiction that had the retail trader extended his scope and carried a more extended variety of goods to tempt the average consumer, there would have been no room for the many department stores which have started during the last few years, and which have diverted much trade from its proper channel.

I greatly deplore the spasmodic and experimental efforts, as well as I deplore the effects caused by either manufacturer or jobber who in order to effect quick and perhaps large sales, has formed connections with what are known as "Catalogue Houses," who send their catalogues to farmers, mechanics and others. Trade diverted through these channels does not produce greater distribution or use of goods, but merely diverts the trade from the sturdy efforts of the retail merchant, and the very nature in which they conduct their business is demoralizing to the prices of both the jobber and the retailer.

It has been my experience a number of times during the past few years, and doubtless has been that of many other jobbing houses, that many retailers have succumbed to failure resulting from their efforts to scatter their small purchases with various manufacturers who can have no possible sympathy in their welfare beyond selling their goods, and the stereotyped work of collecting their few bills. While any reasonable jobber, the conditions having been made known to him, would have cheerfully aided them in carrying their indebtedness until they could make collections and payment, while in the hands of a hundred persons or more they could not expect to receive the same consideration. I have further known very many, and the details of many have been shown to me, who were saved from bankruptcy by confining their purchases to a limited number of legitimate channels in trade.

We all recognize the fact that an occasional manufacturer will startle the trade by announcing his yet untried policy of going direct to the retail trade, but we have been surprised at the prominence given in trade journals to these spasmodic and untried efforts. If one would go further and look into the facts he would find that usually there are reasons for the departure, occasionally it may be traced to having but little jobbing trade. More frequently it will be found that this manufacturer has been especially catering to the department store or "Catalogue House" trade, who have so demoralized the selling prices that they have made the sale of the goods unprofitable to both the wholesale and retail merchant. The jobbers in cases of this kind have naturally abandoned the selling of this manufacturer's goods. Then, with a flaring of trumpets the new policy is announced.

We also recognize the fact that an occasional man, or a dozen men engaged in trade, may express in print their conclusions as to what would be to the advantage of some *twenty thousand* or more dealers. It will be found these views are usually expressed from knowledge obtained in the very narrow limits of their own business, either that or superficial theory, and they do not realize the positive requirements of the greater number of the 20,000 or over retail merchants in trade, or the advantage of at all times buying their goods at a stipulated price from the jobber, while a large number of manufacturers to-day are receiving orders only at prices ruling at date of shipment.

Imagine for a moment Henry Disston & Sons, Fayette R. Plumb, Barnett File Co., McCaffrey File Co., Nicholson File Co., and a hundred other firms we could name equally applicable, abandoning the policy of selling in the quantities referred to in this article, and traveling over the country placing their single line upon the market, asking for specifications for goods they could furnish within the next sixty or ninety days or four months. It would be far more easy for a jobber to step beyond his limited sphere and visit the large consuming trade of the country, for he is always provided with a suitable variety of stock, and could sell his line of shovels to the miners, files to the manufacturers or mill owners, lock furniture to the builders, bolts and screws to the manufacturers, and so on, and form connections with department stores in every town and hamlet of the country.

Referring to the names of those who are to contribute to the issue of April 10th, there may be those who entertain opposite opinions, which is but natural, for if all men were created to think alike there would be no room for two political parties in this country, nor the dissensions which exist upon the most vital questions in the same party, nor would General Washington have had heaped upon him the unjust viturperation during the hardships and sufferings of his six years' campaign for liberty, nor compelled to endure the tortures of the calumny heaped upon him during the term of his presidency. But I feel that there is no mercantile business in the United States conducted upon so small a margin of net profits as the Jobbing Hardware business, and that the jobbers fill a place needed for the requirements, and are of inestimable advantage to the retail trade, and have for years stood between the manufacturer and the retail dealer in suffering changes and declines in goods, and fully believe that the goods reach the consumer at a less cost than could possibly be accomplished through other channels, and the youngest retail merchant in trade will not live to see the day when the jobbers' usefulness can be dispensed with, that they are here to stay, and finally, on the average are an honest and good set of fellows.

Yours truly,

WILLIAM W. SUPPLEE.
President of Supplee Hardware Co.

Philadelphia, Pa., March 30, 1899.

Saw-edged scissors is one of the newest novelties. In general design they are identical with the scissors we know so well, but instead of a smooth cutting surface, each blade has an edge like the carpenter's saw. The sides of these teeth are shaped at an angle to the plane of movement of the blades, and also toward the end, the advantage being that the operation of cutting is made easier, an important item in handling heavy goods, and also that a clean, smooth cut is made at every operation. These blades are said to hold their edges much longer than the old straight edge style.—*Chattanooga Tradesman.*

The growing interest in the Warren Shelving, J. D. Warren & Co., Chicago, has been evidenced in the past ten days by the placing of numerous large orders from customers in the Northwest, others in the East, and a very choice outfit to be shipped to Belgium.

HARDWARE costs only One Dollar a year.

Mr. Fernley on the Jobber.

Editor Hardware: You have asked me to write a few words on the early and crucial days of the National Hardware Association. Since receiving your letter I have been giving the matter a good deal of thought. I have come to the conclusion that the National Hardware Association—while it may have had its early days (as most things do)—yet I cannot recall any days which might be considered as crucial.

I find that one of the dictionary definitions of the word "crucial" is "like a cross." The word "cross" in this connection doubtless meaning something heavy to bear.

I have never found in my duties with this Association that there was any particular "cross" to be borne, and indeed, the labors have been extremely pleasant.

It is quite true that at times we have been called upon to define the proper channels of trade, in order that those who desire to keep in the channel should not become shipwrecked.

Since our early days, as an organization, we have been endeavoring to induce the manufacturers to protect the retail trade against the piracy of the department store and catalogue house, and we have met with some degree of success in this.

Some manufacturers have endeavored to class the catalogue houses with jobbers, but to this we have always objected.

We believe that if the jobbers and retailers, individually and through their respective associations, will call the attention of the reputable manufacturers of the country to the demoralization caused by the sale of their goods in department stores and catalogue houses, that heed will be given to these respectful requests.

Very soon after assuming this office, the writer was called upon to give the definition of the term "jobber." He stated that a jobbing house was one located at a central distributing point—carrying an ample stock of goods to supply the wants of the trade solicited—and distributing these goods to the retail dealers, through the medium of a corps of traveling salesmen, steadily employed. This definition has been submitted to the best thinkers in the trade, and has been generally accepted.

Certainly, under this definition the "catalogue house" could not be classed as a jobber.

It is the earnest wish of the writer that the trade might continue to flow in its proper channels; that the tendency of the manufacturer to sell the large consuming trade might be curbed; that all goods shipped reach the consumer after having passed through the hands of the jobber and the retail dealer.

We find the most intelligent retail dealers much prefer to patronize the jobber.

1st. Because he obtains the benefit of the jobbers' judgment in assembling proper variety of goods.

2d. Large saving of freight by reason of ability to have small quantities of many goods packed and shipped in one lot.

3d. Larger use of capital, a much smaller amount being tied up in stock, than if purchases were made of sufficient size to justify the factory shipments in every case.

4th. Because he realizes that goods reach him at a less net price through the jobber than if the same were purchased from manufacturers. The cost of selling goods must in some way or other be added to the price. The retailer realizes that the manufacturers calling upon him with a single line of goods does so at a much greater expense than the jobber who is handling many hundreds of lines at the same time.

5th. The retailers realize that if they were forced to purchase from the manufacturers, they would not have the advantage of prices, which they receive by reason of competition.

Many lines of goods have an individuality of their own and if the manufacturer were distributing these goods himself he could ask his own price. When he puts them in the hands of a dozen or so jobbers in one section of the country the competition between these jobbers will eventuate in the goods being sold to the retail trade at a price which will always be satisfactory to the latter.

Many other reasons have been advanced, and these are simply some that have made an impression on the mind of the writer.

We congratulate you on your enterprise in issuing this special edition of your paper, and devoting it to the interests of the Jobbing Trade, and hope that you will receive your reward in an increased patronage.

T. James Fernley,
Sec.-Treas. National Hardware Association.

Philadelphia, April 3, 1899.

George Tritch's Golden Wedding.

An examination of the portraits of the correspondents of *Hardware*, found upon three continuous pages elsewhere in this issue, will show that of George Tritch, of the George Tritch Hardware Co., Denver, Colo., and it would be difficult for the reader to imagine that Mr. Tritch had been married a sufficient length of time to permit of his celebration of his Golden Wedding Anniversary.

On March 25, 1849, Mr. Tritch was married in Pittsburg to Miss Hammond, of that city, and the two have traveled side by side in love and companionship, for the fifty years that have been passed since that marriage day. The anniversary of that event was celebrated on March 25th at the home of Mr. and Mrs. Tritch, in Denver. The children and grandchildren gathered at the family home for fitting celebration of the day. Concerning this event the Denver *Republican* says: "To-night, covers will be laid for a family dinner, which will include all of the large number of 'kith and kin' who are now in the city. There will be present: Frank Tritch, Mrs. Elizabeth Good, Mrs. Emma Snyder, Mrs. Merritt Gano, George Tritch and Miss Jene, of the immediate family. Among the grandchildren will be the two little children of Mrs. Good, one of Mrs. Snyder, one of Mrs. Gano and three of Mrs. George Tritch, Jr. The daughter of Mrs. Mary Rogers, who was married a few years ago in Denver to Mr. Houston, of Boston, lives in that city. Several others of the large family are out of city at present, but there will be a long tableful of 'family' guests to drink a hearty and sincere toast to more 'happy days' for the couple who have spent together fifty years in 'love and sweet content.' It must have been an extremely youthful pair that stood before the minister on that March day fifty years ago, if one may judge of the appearance now, of the couple to whom congratulations have been extended again and again for the last few days."

In their card elsewhere in this issue, the Grand Rapids Refrigerator Co., Grand Rapids, Mich., who are always looking out for improvements, announce their Leonard Cleanable Refrigerators with the sub-title, "The Aluminum Lined." These refrigerators, a sample of which is shown in the advertisement referred to, are described as non-poisonous, the provision chambers being lined with aluminum. These goods are made of quarter-sawed oak, with a golden antique finish, with shelves which slide out, and are adjustable to any height. They are insulated with mineral wool, and contain all the other features whiuh have made the Leonard Cleanable Refrigerators so favorably known the world over.

Farmers object to paying from twelve to fifteen dollars for a set of wide tires, but they are satisfied to drive over the fields twice for each load of corn and keep on doing it.—*L. A. W. Bulletin.*

PRES'T BISHOP ON THE NATIONAL ASS'N.

"TIMES CHANGE AND MEN CHANGE WITH THEM."

Editor Hardware: This is essentially an age of development, of progress, which means change from conditions previously ruling, and the necessity for the adoption of new methods to meet those changed conditions. Progress is not confined alone to the arts and sciences, but to mercantile pursuits, and the merchant who would keep pace with the times must give to his business the same close attention, the same study that is given by the thorough lawyer, the eminent physician or the accomplished scientist. To be a thorough Hardwareman in these days implies much more than appears at first glance. The technical knowledge necessary increases with every year, and fortunate is he who can claim that he possesses complete knowledge of the multitude of articles which constitutes a stock to-day, and the use of each. But technical knowledge is not the only necessity. It must be accompanied by a general business training, a development of the principles of common sense, which are, after all, the foundation principles which must govern the successful business man. It is quite evident that the study of business principles and their application to practical every-day transactions cannot be facilitated in any better manner than by the constant interchange of ideas and plans on the part of individuals, and that knowledge is thus gained more rapidly than by the slow and laborious process of individual solution of each knotty problem without extraneous aid.

In recognition of this truism the National Hardware Association of the United States came into being in the year 1894, and stands to-day the peer of any organization in this country or the world. Its avowed object is the cultivation of more friendly relations between its members, who had, heretofore, been, if not actually unfriendly to, yet certainly unacquainted with each other. It has developed knowledge of the fact that no one man is the personification of all the virtues or of all the vices which we are wont to commend or condemn; that there was more than one man in the Hardware trade who had good ideas, and was willing to give to all the benefit of them. It has cultivated fraternal regard for those contending with the same difficulties, and the brotherly spirit which leads to extending the hand in sympathy and assistance rather than the selfish care for number one alone which had, heretofore, characterized the attitude of competitors.

This is but one step in the direction of its usefulness. With the fraternal spirit existent and cultivated, it has been possible to introduce and put into practice needed reforms in methods—to suggest and adopt new and improved methods for the care of daily routine—to centralize and distribute from that centre, hundreds of ideas for the advantage of its individual members, which no one of them could or would have thought out in the term of his natural life.

The National Hardware Association is composed exclusively of wholesale dealers in Hardware and metals, and comprises all houses in those trades with a few exceptions. It may safely be said that eighty-five per cent. will be found upon its lists. It conducts all of its affairs, so far as its relations to manufacturers on the one hand, and retail dealers on the other, upon the principle of the golden rule—"Do unto others as you would have them do unto you"—and to this claim many manufacturers, either singly or in associated bodies, can bear witness from actual knowledge. It has a mission to perform in both directions, and is ready and anxious to fulfill that mission.

It is the representative of the natural distributors of manufactured products, and it will endeavor to accomplish in the future a recognition of the rights and privileges of its members on the part of manufacturers with whom they deal, to define the province of each according to its ideals, and obtain the recognition of just and honorable principles for the government of all. It will endeavor to implant more firmly year by year in the minds of its members the good results to be obtained by consultation either by mail or in person; to add to the dignity of the Hardware trade as a profession, and to inculcate in the minds of those now growing up in the business, and who constitute its future

H. H BISHOP.

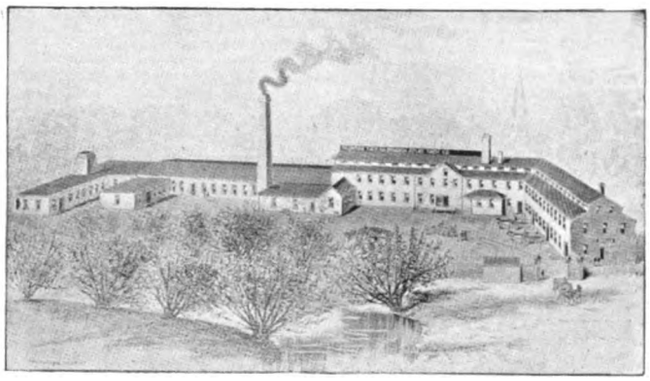
prominent and leading men, honorable and straightforward business practices and regard for their fellow men.

We are proud of our association, of its members, of its objects. It has friendship toward all, malice toward none. Its principles are sound. Its success assured.

Cleveland, Ohio. H. H. BISHOP.
President National Hardware Association.

The Troy Nickel Works, Albany, N. Y., have lived up to their reputation for artistic advertising material, in the publication of their recent catalogue entitled "Always Cold Alaska" This is their seventeenth annual catalogue and price list of Alaska stove trimmings and Hardware. It is unnecessary to enumerate these goods, which are known the world over, and all that need be added is the fact that any dealer in stove goods who attempts to load himself up for the coming campaign without knowing what is offered in Albany, will not live up to the full measure of his opportunities.

A. E. Hutchinson, No. 792 Broad Street, Newark, N. J., has recently published a small work entitled "How It Is Done," dovoted to the science of circular saw-filing. It furnishes illustrations of the W. & H. Circular Saw Filer, giving methods of use, etc. It also furnishes illustrations of his circular saw sets put up ready for use, and also the W. & H. Band Saw Vise. Mr. Hutchinson handles everything needed in the way of saws and mill supplies, and will be pleased to furnish informatiou to any who are interested.



A lawn mower is an appropriate wedding gift for a man who marries a grass widow.—*Exchange.*

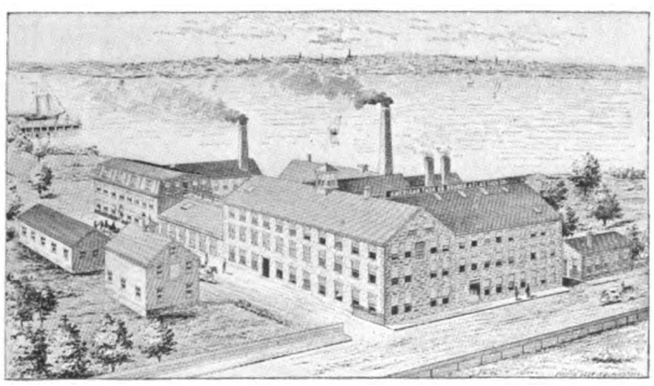
The Atlas Tack Co.

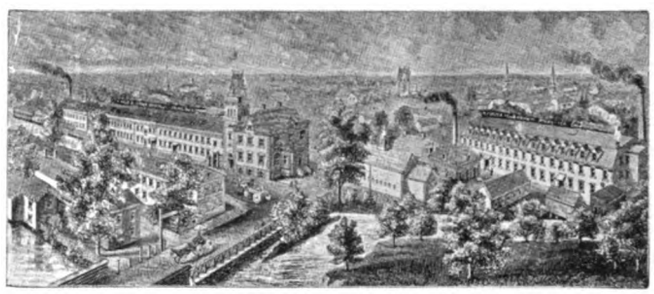


This company are operating three mills in Taunton, Mass. It would be impossible, outside of a special volume, to do anything like justice to this concern in an attempt at its descriptive history and position among the industries of the country.

It was incorporated in 1897, and was made up by a consolidation of the Albert Field Tack Co., Taunton Tack Co.,

ATLAS TACK COMPANY, TAUNTON, MILL NO 3.

Taunton; American Tack Co., Fair Haven; Dunbar, Hobart & Co ; Whitman, Loring & Parks, Plymouth, and the Old Colony Rivet Co,, Kingston. These institutions were successors to some of the oldest concerns in America. D. Hobart & Co. succeeded Dunbar, Hobart & Whidden in 1887. The latter succeeded B. Hobart & Son in 1855. The latter succeeded B. Hobart in 1848. B. Hobart was the pioneer in the tack business of America, having engaged in that business in 1810. The Albert Field Tack Co. succeeded A. Field & Sons in 1869. The latter succeeded A. Field & Co. in 1859. A. Field & Co. succeeded Albert Field & Co. in 1857. This branch of the business was begun by Albert Field in 1827. The business of the American Tack Co. was begun by Arby Field in New York City in 1830. He was succeeded in 1851 by Jude Field, who was succeeded by William S. Guerineau in 1855. The American Tack Co., of Fairhaven, succeeded to the business of William S. Guerineau in 1867. Loring & Parks began business in 1886, as successors to Samuel Loring, who founded that branch of the business in 1842. The Taunton Tack Co. was organized in 1854, and the Old Colony Rivet Co. in 1866. The above company is therefore the direct successor to the oldest and largest tack concerns in America, and is itself the



ATLAS TACK COMPANY, FAIRHAVEN, MILL NO 4.

largest tack manufacturing company in the world. It was reorganized in 1897 with a total capitalization of $1,800,000.

The word "tacks" almost invariably carries with it the impression of something small. With this impression in one's mind, it is not an easy matter to realize that the tack business is not, of necessity, a small business. The variety of tacks, nails and kindred articles manufactured by this concern is very great, and while the exact number is not known, it would probably be safe to estimate it at from 15,000 to 20,000. The list embraces every kind, style, size and descriptian of tacks. Iron, Swedes, steel, brass and zinc shoe nails in all sizes and shapes known to the trade. Steel shoe shanks, heel and toe plates, spring beds, cast head coffin tacks, lining and saddle nails, tufting buttons, glazier and veneer points, eyelets, wire nails and brads, rivets and burrs, copper belt rivets and burrs, double-pointed tacks and staples, leathered carpet tacks, etc.

In addition to the three factories in Taunton the company owns and operates a factory at Fairhaven, which originally belonged to the American Tack Co. It employs about five hundred hands, many of whom are skilled laborers. The average wages paid by the Atlas Tack Co. are considerably higher than the average wages paid in the cotton industry, and are as high—if not higher—than the wages which are paid in any other industry in New England.

L. O. Garrett, of Fairhaven, is the manager, and since he has been in charge of the business the factories have been completely overhauled. Antiquated old power plants have been taken out and a modern plant established at mill 1, from which mills 2 and 3 are electrically driven. This is the only manufacturing concern in Southeastern New England that has installed for general use an electric power plant. The mills are being lighted by electricity generated on the premises. A complete system of heating has been installed in mills 1 and 2, and will be carried to No. 3 before the cold weather sets in. The distance from the power plant where steam is generated, to the furthest point of consumption at mill 3, is 2100 feet. The work al-

ATLAS TACK COMPANY, TAUNTON, MILLS NOS, 1 & 2.

ready done in this line, has thoroughly demonstrated the feasibility of carrying steam great distances cheaply and successfully. A local telephone system has been put in, connecting the main office with the various departments in each of the several mills. Many efforts have been and are being made to modernize this property. It is now as up-to-date as an old property can well be. In fact, the management is thoroughly impressed with the idea that business can only succeed by keeping abreast with the times. It is unquestionably an advantage to inherit the good name and good will of well-known predecessors, but it is equally necessary to keep up with the times so far as machinery and methods are concerned.

We have received from the Stowell Mfg. & Foundry Co , South Milwaukee, Wis., their special catalogue of Door Hangers and Rail. These well-known articles are fully illustrated and described, and everything that is necessary for the dealer or the consumer to know regarding them is given in full. They have also issued a catalogue, showing their Door Hangers and Rail, Hot-Air Registers, Shoe Lasts and Stands, Tackle Blocks, Grey, Malleable Iron and Brass Castings, etc. These publications are both artistically finished, and the illustrations which are shown stand out clearly, so that the reader seems to see the very articles themselves before him. One page is devoted to a presentation of their great plant at South Milwaukee, and another to the portraits of their chief officers, Hon. John M. Stowell, president; George P. Jones, vice-president, and Charles E. Sammond, secretary and treasurer.

JOBBER---MANUFACTURER---RETAILER.

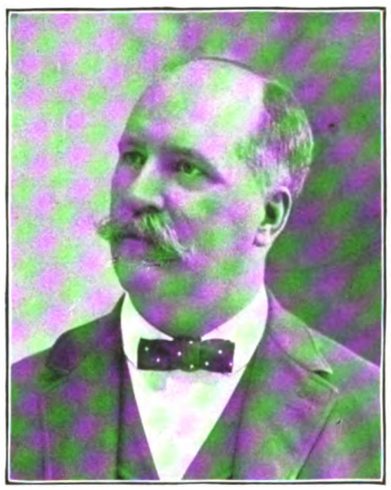
Shakespeare, in one of his ablest and most forceful passages, says something that indicates the necessity of a friend being acquainted with a friend's infirmities. Probably if the immortal William had extended this bit of philosophy, he would have added something in regard to a friend, and an enemy, both knowing something in regard to the infirmities, the good points, the shortcomings, and the necessities, of those with whom they were associated in any important degree—especially in connection with the transaction of the Hardware business.

It was not with the purpose of investigating either the frailties or virtues of those connected with the Hardware trade, that we arranged for the series of articles which immediately follow. It was rather for the purpose of discussing the exact relations which exist between the Manufacturer and the Jobber upon one hand, and between the Jobber and the Retailer upon the other, that we invited the gentlemen whose names are found below, to prepare the four articles which we here reproduce with great pleasure, as we are certain that they will be to the profit of the trade.

James D. Foot, of the Kearney & Foot Co., a manufacturer, has prepared one discussing the jobber from the manufacturer's standpoint; John Bindley, of the Bindley Hardware Co., Pittsburg, Pa., a jobber, has prepared one in reference to the manufacturer from the jobber's standpoint; H. P. Davidson, a retail dealer of Cleveland, Ohio, has furnished one in reference to the jobber from the retailer's standpoint; while J. H. Smith, of the Smith Bros. Hardware Co., Columbus, Ohio, a jobber, has written on the retailer from the jobber's standpoint.

Each of these gentlemen has a marked individuality, and the statements which they make, and the conclusions to which they have been led, have been evolved out of years of practical experience in the Hardware business, and we commend this symposium as one of the most interesting and valuable that has ever been prepared in connection with the Hardware trade.

JOBBER FROM MANUFACTURER'S STANDPOINT.



[To those who see fit to look at this article, in justice to the writer, he asks that they read it in its entirety and not in part. With this request I now proceed to lay the matter before the reader.]

Editor Hardware: In considering this subject, I wish to go back in the history of the business of this country when the jobber was the importer, existing principally in New York but a business factor of every seaboard city on the Atlantic coast. As a rule, he carried a large stock of Hardware—his customers came from three to four hundred miles inland, and with so much inconvenience to themselves that a trip to a seaboard commercial centre once or twice a year, filled all requirements. They bought largely and from few sources, and the labor of doing business made seller and buyer close friends in those days. The importer was of necessity the middle-man, and the dealer the distributor to the consumer, large and small.

As population increased and importers in proportion, competition forced the importer to see the dealer and the dealer, in turn, having more home competition, to hold his own with the importing jobber, for his larger requirements, becoming a direct importer or semi-jobber, for he took care of that trade too small to go to the large commercial ports and still continued his home business. With this general statement of the importing jobber and the inland buyer, I will now advance one step further on my argument.

With a fast developing country, towns became cities and inland commercial points were soon vying with commercial seaports for not only the business to be had around them, but these inland points began to reach towns for that business further inland until they in turn were, so to speak, inland importers and between the seaboard points and the extreme business points. Having enlarged this portion of my argument, to firmly fix it in the reader's mind, I now go on more specifically.

New York and Philadelphia in these early days were the large importing and jobber centres for Hardware—New York more especially. Follow my previous thought and where does New York stand in Hardware as a jobbing centre? As the State developed, Albany, Syracuse, Rochester, and Buffalo, with the help of river, canal and lake transportation had their own importing jobbers who, with

JAMES D. FOOT.

good credit, were soon making direct importation from the same source of supplies, (England and Germany) as did the New York merchant During this period a new element in business came in, to further complicate business methods and increase competition—it was the manufacturer, and to him a large order in the interior was just as good as one on the seaboard. By rapid strides this state of affairs progressed until in the inland cities Albany, Syracuse and Buffalo, jobbers in Hardware were on a parity with those of New York, until at the present day there is hardly a strict jobber left in New York, and a large importer of general Hardware is a rara avis. As our great West developed, Chicago and St. Louis were the outposts of business: they in turn must and have been giving way to still further western and northwestern points, such as Omaha, Kansas City, St. Paul, Duluth, etc. Chicago to-day has about one-third its former jobbers in Hardware, its trade dominated by one house unique in its way of doing business; conditions in St. Louis are the same, except that the house there in its business methods is more original and successful. In the South with Cincinnati, Louisville and New Orleans the centres for distribution, where do the two former stand to-day as centres of Hardware with their field disputed by several of the larger Southern cities?

The present manufacturer asks: Where shall I draw the line on the term "jobber," and how sharply can I define it?

Digitized by Google

The National Association of Jobbers has been of great help to the manufacturer in covering the definition of jobber. Every year sees new names added to the list, some of them buying in certain lines, more than a few of the members of long standing in the National Hardware Association.

As business centres increase in population lines are more closely drawn between the jobbers and competition increases. A retailing centre to-day may be a small jobbing centre five years from now. Say what we may, the growth and development of the country is bound to bring the retailer and average jobber nearer the same line. The jobber sees his business area curtailed from year to year; the retailer, if he has a natural growth, sees his increase to that point where he places a man or two on the road for a few months in each year.

I have now arrived at a point where it is possible to divide the jobber into two classes, giving their respective values to the manufacturer.

Those of the first class are to day on a line, one side of which is a large population, on the other a partially developed country. These the manufacturer most requires; for, while in the past they were the manufacturer's customers, they are still his customers to distribute for him his goods in every hamlet, town and small city of the partially developed country. Without him the manufacturer has no medium through which to introduce his wares without great cost to himself.

The second class is not so important as the first, but is still of help to the manufacturer. He can, in thickly populated districts, keep before the country store and the city retailer the manufacturers' goods, and every manufacturer, of course, will recognize the value of this; but he, unlike the jobber in class No. 1, has the large retailer, in a certain sense, a competitor, and the large consuming manufacturer who fails to see why his money for supplies should not go as far as another's. With class No. 2 is where the manufacturer has friction. The very competition he is meeting makes him sharp to seize every advantage, many times unfair to the manufacturer, but upon which his patronage of the manufacturer falls or stands.

I will enumerate some of the claims made by jobbers of this class which are hard to stand, and are against the interests of the manufacturer.

1st. Legitimate jobbers in the National Association will claim the right to use a syndicate buyer; by so doing he fosters and helps a small jobber to buy at his prices, and perhaps compete against himself, besides weakening the hands of the manufacturer.

2d. They will circumscribe the territory in which a manufacturer must not sell to another jobber on a promise to give the manufacturer's line special attention, and send their men out with general instructions to push A's line, but also to sell B, C and D's, if the customers prefer them, forgetting that special 5 per cent. they secured on a promise to especially push A's line.

I do not class all jobbers as such, but far too many of them. I do not blame the small jobber for using a syndicate buyer, but I do the average large jobber who throttles the manufacturer from selling the small jobber, and then in using the syndicate buyer himself makes possible the very competition he wishes to avoid by securing for the buyer of the syndicate large jobbers' prices, which, by the buyer, are shrewdly used for the benefit of the small jobber and large retailer on his list.

When prices are held back by the manufacturer from the buyer of the syndicate, even then do certain large jobbers post the buyer as to what discount certain lines should be bought at, even though they may have asked under secrecy to the manufacturer that they, as large factors entitled to special consideration, be given a little inside in view of the special push they will give this special line.

These jobbers are their own worst enemies, and those who prosper from the help of such jobbers show good judgment, inasmuch as the buyer secures a competency for his services, and the small jobber and retailer his goods at better figures than he usually obtains from the manufacturer.

I may be treating these points of vexation, to the buyer, retailer, small and large jobber, with too much frankness, but these are facts which have been in dispute for years, and properly come under my consideration in handling this subject.

Department Stores are receiving much attention from all grades of trade. The jobbers protest against the manufacturers selling them, as also do the retailers. The manufacturer dodges the issue when selling the trade, and the department stores secure any line of manufacturers' goods they desire to handle, and at jobbers' prices. How the subject is to be handled, and a solution arrived at satisfactory to all, I cannot theorize on in this article; suffice it to say, we are all in it up to our necks, and all very unhappy over it.

JOBBER AND RETAILER.

Some of the largest jobbers in the country to-day not only possess magnificent structures from which to wholesale their stock, but also a gem of a retail store in which they allure the consumer. They also put out expert salesmen on the road to visit the towns (where some other salesman from their house sells the retailer), and he visits the large consumers to not only sell him his large supplies in bulk or quantity, but, incidentally, to supply any employee with rule, jack-knife, razor, etc. This exasperates the retailer, for where is the market for his goods? What is the result? In our leading States we find the retailer combining to protect himself against such jobbers. Their first aim is to cross such jobbers off their lists; thus is the manufacturer, who supplies the jobber, robbed of his trade, and can he blame the retailer? I think not. Does the jobber pursuing this line of business realize the injustice he is doing the manufacturer, and the wrong he inflicts on his former loyal retailer, and the outcome of such methods? Unless drastic measures are taken to suppress them they will surely test the loyalty of the manufacturer, and bring the retailer and manufacturer of necessity together. I cannot believe so shrewd a body of men can follow or condone such suicidal ways of securing trade.

Let the jobbers keep to the strict line of a jobber's position; buy and handle the product of the manufacturer without the aid of any syndicate buyer; distribute his merchandise through intelligent salesmen to the retailer at a fair price, and leave the retailer an opportunity to handle and look after the wants of his consuming trade, and there will be little doubt as to the help a manufacturer can secure from such a jobber as a distributor of his wares.

I have been fair and frank in all my statements, feeling that the body of jobbers would endorse all I have said in the nature of faults to be corrected, and which those strongest and best in their ranks are trying to correct.

James D. Foot.
New York, 1899 Kearney & Foot Co.

MANUFACTURER FROM JOBBER'S STANDPOINT.

Editor Hardware: The method of marketing or distributing the products of the factory, is greatly influenced by the surrounding and existing conditions, even to a greater extent than we appreciate. Note the present manner of doing business with that of earlier days, when primitive conditions surrounded our predecessors; first the pack horse as a means of conveyance, then the Conestoga wagon, afterwards the canal boat, and then the railroad. Contrast the conditions with the methods then and now. The exigencies of the times bring about the existing circumstances. The economics of the day develop the best method of procedure. The jobber is here, and exists under

Digitized by Google

the present conditions, and here he will stay until there is found a better and more economic way of distributing the products of our workshops. Notwithstanding the prophecies of evil that are to befall him, even to the numbering of his days, we who have heard this same old story, for, lo! these many years, realize and place these evil forebodings in the same category as the idle fancies of pipe dreamers.

The permanent method of any means of distribution must have for its foundation the rock of economy, in connection with facilities of near and quick delivery. In this day the quality of the service must be continuously improving to keep pace with the growing, exacting demands brought about by the advancing enlightenment of the age in which we live. The days of electricity and telephones require immediate attention, giving a better and more satisfactory service, although at a much greater cost than under former conditions.

Should this question be propounded to the manufacturer, "Can you distribute the output of your works to the retailer direct, at less cost than the jobber can perform this same service?" the invariable answer upon the first presention of the subject would be "Yes;" the books are referred to, and the percentage of costs furnished for doing this part of the business; analysis determines that this low expense is reached because the great proportion of his business is done through the jobber, thus placing his product at a minimum cost, and practically no losses. Under the new conditions now confronting us, in which the most advanced methods are used, because they combine the most economic conditions, viz.: the manufacturer to the jobber, thence to the retailer, and this must necessitate a choice through which channel the manufacturer will market his goods, whether through the jobber or retailer, and not as heretofore, through the combination of both sources.

The manufacturer who selects the retailer, by and through whom to place the product of his factory, will find this method a greatly increased one of placing his wares. The increase of percentage will be so great that it will require an advance of prices, which means an increase of cost to the retailer, and the increase of expense in selling the goods is not the only item of additional expense. The manufacturer must, perforce, carry an extra stock; also carry the stock between seasons for the reason that the retailer will not purchase only as his wants require, and in the season, whereas the jobber orders his supplies in the dull, or between seasons, thus not only furnishing positive orders for goods, the value of which all manufacturers fully appreciate, so that the factory can be run with satisfaction, but also furnishes storage and practically capital upon which to do business. The elements of credit risks are almost eliminated, as but few jobbing Hardware houses fail, owing to the fact that they must have large capital and abundant means before entering into the jobbing business to any great extent. These are potent and important factors in this method of marketing goods.

No manufacturing concern of general Hardware can dispose of its entire output to the retail trade exclusively at anything near the same expense as the jobber. In this case all sales are limited, and when a salesman foots up his daily or weekly sales they amount to practically nothing in dollars, and the quantity of goods sold is so small that it will require an army of salesmen to secure enough orders to keep a factory running, and the expense, out of all proportion, so great that prices must advance at once. In addition, after the placing of the second order, owing to delays, extra freight expenses and over buying, the retailer gladly goes back to the natural conditions and buys from the jobber. The jobber need have no fear of the competition of the manufacturer, even to large retail trade, if he will only be true to himself and his fellow tradesmen, by refusing absolutely to trade with the manufacturer who cultivates all classes of merchants. Deal frankly. If the manufacturer wishes the retail trade through which to place his product, then allow him to use that channel exclusively; he, the jobber, buying from him who chooses the jobber as his preferred method.

No manufacturer ever attempted to sell the small retailer, but confines himself to the choice and large retailer, and always seeks the jobber in addition.

The small buyer must have the jobbing house, which assembles the great variety and immense stock for his accommodation, and one of the points our jobber of to-day loses sight of is the fact that he is an actual necessity to the small retailer, and therefore it is not necessary for him to buy his business at the price he has heretofore been paying for it. Pass the jobber out of existence, and see what

JOHN BINDLEY.

a cry would go up and out for him from the retailer as well as from the manufacturer.

JOHN BINDLEY,
Bindley Hardware Co.

Pittsburg, Pa., April, 1899.

JOBBER FROM RETAILER'S STANDPOINT.

Editor Hardware: Upon receiving your request for an article upon the subject of "The Hardware Jobber from the Retailer's Standpoint," the undersigned immediately wrote you, suggesting that others were much better fitted for that work, and requested that he be excused, but upon receiving your second request, concluded to do the best he could for you, only hoping the article would reflect some of the personal interest and good will which the writer has for the Hardware people in general—manufacturers, wholesalers and retailers.

The Hardware Jobbers are positive necessities to the Hardware trade in a great many ways, some of which are as follows:

1. By acting as distributing agents they save the manufacturers a great many expenses, such as traveling salesmen, advertising, carrying of large stocks to fill small orders, keeping of small accounts, collecting, etc., etc.

2. They carry such large and varied assortment of goods, that retailers do not have to invest so much capital as they would were there no jobbers.

3. They start many dealers, with small capital, on the road to success, by extending them credit.

4. Their proximity to retail dealers saves large freight bills, also enables said dealers to obtain goods quickly and at short notice.

5. They are very handy people to have around when we retailers want defective goods exchanged, also estimates figured on goods which we do not carry in stock.

Owing to the fact that jobbers carry the stocks for retailers to draw from, and that they buy in large quantities, sufficiently in advance of the season to enable manufacturers to gauge the market and know about what quantities to make up, the jobber should get lower prices than the re-

Digitized by Google

tailers, but this fact of their getting these lower prices, should, in the writer's opinion, compel them to remain *Jobbers Only* and not jobbing retailers.

All jobbers but one in this city run large retail departments, and send their representatives from these retail departments to all parts of the city, soliciting trade from people who should be supplied by regular retail dealers, such as small stores of other lines, factories, workmen in factories, carpenters, contractors, etc., and, because of the fact that they buy, as jobbers, in large quantities, they can afford to quote better prices than dealers who do a retail business only.

This is not a fair or just condition.

Retailers would, undoubtedly, be willing and glad to have manufacturers of Hardware sell to the jobbers at lower prices than the retailers pay, because of the many benefits which they, as retailers, derive from the jobbers, if conditions such as outlined above did not exist, but so long as they do exist the retailers have the feeling that they should be put on the ground floor, by the manufacturers, in regard to prices and to the end that they may be in a position to meet the jobbing retailer's competition.

I understand that one of the principles of the National Jobbers' Association is that there are three natural channels for merchandise: First, from manufacturer to wholesaler; second, from wholesaler to retailer; and third, from retailer to consumer. But this principle does not coincide with the actions of many members of the Jobbers' Association, in trying to be the whole thing, by acting as both wholesaler and retailer, the consequence of which is, that we retailers are driven to handling goods entirely out of our line in order to live.

Years ago there were a great many retail dealers in Cleveland who did a very extensive business in builders' Hardware, buying nails in one to three car lots; locks and knobs, three to ten cases each: sash cord by the ton; sash weights, three to ten ton lots, and other goods in proportion, but the trade were drummed so thoroughly by the retail solicitors of the jobbing houses, that these retailers were gradually frozen out af this part of their business, and, at the present time, there are, probably, not more than one or two exclusive retailers who do twenty-five per cent. of the builders' Hardware business which they formerly did.

These conditions of low prices, bad competition, etc., have been brought about, to a great extent, by the jealousies existing among the jobbers themselves, no jobber seeming to be willing that anyone else should sell goods, in consequence of which they all, often, figure goods so close that there are no profits to be derived by the jobbers themselves, much less by a small retailer.

In a conversation with a prominent jobber in regard to these conditions, the writer gave it as his opinion that a jobber should not retail a cent's worth of goods, whereupon the jobber asked who would take care of the large retail trade, such as trimming large buildings, etc., there being so few large retail stores here, and the answer returned was that large retail stores would be established just as soon as such stores were given a chance to live.

It would be an enormous sacrifice on the part of the jobbers to discontinue their retail departments, and the writer does not look for any such thing to happen, at least not soon, but it seems to him that, if the jobbers have the interests and good will towards the retail dealers at heart, to the extent which they should have, they would, at least, grant them some concessions, such as figuring a large margin of profits on estimates, withdrawing their retail solicitors who drum up trade from small stores, shops and shop workmen, etc., to the end that a small Hardware retail dealer would stand a little chance of making a living without resorting to the doubtful expedient of putting lines of goods on sale entirely foreign to the Hardware business.

You are, probably, beginning to think that this article is, like Tennyson's brook, "going on and on forever," and the jobber may accuse the writer of being a "kicker," but as you wanted my views, it was impossible to express them in a shorter way and in softer terms. All jobbers who have had dealings with the undersigned, will understand that this article is not inspired by any personal feelings or against any jobber, but is only intended to show conditions as they are.

Begging your pardon for using so much of your valuable space, I remain,

Yours respectfully,

Cleveland, Ohio, April, 1899. H. P. DAVIDSON.

RETAILER FROM JOBBER'S STANDPOINT.

Editor Hardware: Having been requested by you to write a letter on this subject, I undertake it with a feeling of distrust as to my ability to do it justice. It is a subject viewed from two standpoints, one the "Jobber's," the other the "Retailer's." I cannot believe there is room for any great difference in the two views. As I understand it, the chief aim of the retailer is to get his goods laid down at his place of business at the lowest cost. Now the point in question is: In what way can this be done? If retailers bought in large enough quantities to justify manufacturers in employing salesmen to visit them and show their wares, and the shipments were large enough to secure a low freight rate, I would say the jobber had no place; but we all know that in but very few instances is this the case. Farmers have tried to shut out the retailer by organizing granges and it has not been a success. Why not? I think it is not hard to answer. It was for the simple but forcible reason that they could buy from their home retailer for less money, and get what they wanted, and as much as they needed, and when they needed it. The same conditions confronted them that confronts the majority of retailers, namely: their wants are too diversified. A farmer needs farm implements, small farming tools, miscellaneous Hardware, groceries, tobacco, clothing, dry goods, shoes, drugs and many other articles, but he does not need a dozen forks or a barrel of sugar, or a caddy of tobacco or a pound of physic; but he may need some of every one of these articles every week. So it is with a retail Hardware dealer. He needs forks and hoes, strap hinges, bolts and screws, shovels and spades, files, jackknives, white lead, brushes, curry combs, rope, step ladders, horse yokes, glass, putty, hasps and staples, lanterns, hatchets, auger bits, nails, horse shoes, tacks, etc., etc. I might continue the list almost indefinitely, and not name any two articles made by any one manufacturer.

How can the retailer get his weekly or monthly wants at the lowest cost? If he orders from the manufacturer, he must order axes from one, strap hinges from another, files from another, and auger bits from another, and so on clear through the list, and he would be obliged to make out a dozen or possibly two dozen orders to get what he needed. Then the freight alone on some goods would be a profit. He has a dozen bills to enter up and pay, which means work. Manufacturers cannot afford to make small shipments at the same price they can large ones. If they had to fill these small orders in broken cases, it would require a much larger force to do their work. It would take more order clerks, more packers, and more book-keepers; and as such help costs money it would have to be included in their cost and added to the selling price. Here is where the jobber is a great convenience. Some pleasant drummer drops in almost every day and inquires as to the dealer's wants. The dealer gets out his want book and says, "Well I have a few wants to-day," and begins to inquire the price of anything on his list from a harness needle to a cutting box; and Mr. Drummer invariably can answer promptly, giving the price, size, weight, and which is the best seller and oftentimes gives valuable information. The dealer

Digitized by Google

orders what his trade requires, 1-12 dozen or a gross, a pound or a ton; and by the time he is through he has ordered perhaps $100 worth of goods. He will get all in one shipment, one invoice, one freight bill; and that perhaps not fifty cents, and he has bought his goods for less than the manufacturer could have sold them for.

Expense is the big bug-bear in any business and is the greatest part of the cost of marketing goods. The jobber represents a thousand—yes several thousand—articles with one salesman, one salary and one traveling man's expense. For the manufacturers to represent the same number of articles it would require many salesmen, whose expenses would be more than the jobber's profit.

To illustrate, I will give the statement of a retailer who travels two months of the year. The article he sells is bulky and light but runs into money fast, a carload costing about $1200. The jobber markets these goods at ten per cent. and he knew the manufacturer paid a man who visited the retail trade twenty per cent. for selling the goods. The man who sells the jobbing trade makes but four towns in Ohio, would not sell less than a car load to any of his customers, while the other man would sell only 1-2 dozen, or a dozen. The man who visits the jobbing trade can make the four cities in a week and place his goods with dealers who visit every town in the State. While they sell the one article on a small margin it is only one of many. Then the saving in freight is at least five per cent. and the retailer gets the benefit of that saving through the jobber. It costs the jobber nothing extra to sell the article as all the salesman has to carry is illustrations. The jobber does not have to depend on any one or even a dozen articles for his profit and expenses, but the manufacturer who markets his goods direct to the retailer has to make his own line cover the total expense. Suppose a manufacturer of shovels would send a man out to sell shovels to the retail trade and the salesman would sell on an average 30 dozen a day, which would be a fair average, 180 dozen per week; how much profit per dozen must he make to cover expenses? If he is a good man his salary would be from $100 to $125 per month, his railroad fare and hotel bills would be at least $125 a month more. I am confident that $250 a month is not an over estimate, but less than it would cost to keep a good man on the road. On this basis the expense alone on each dozen shovels would be about 35 cents a dozen. Any good retailer knows that he can buy shovels at 25 cents per dozen more than the jobber's cost, or 10 cents a dozen less than the expense to the manufacturer to sell them; and the retailer buys them from a nearby jobber with a freight rate of from 7 to 15 cents per 100 pounds. I heard a retailer suggest the plan of retailers joining together and employing a broker to buy for them and cut the jobber off. Now how would that remedy matters? It would be patronizing a man who carried no stock and had nothing at stake but his commission or salary (jobber's profit) in preference to the jobber who carries the stock and is always willing to make any defects good; and if you get goods that are not suitable to your trade the jobber will exchange. In fact the jobber does with the retailer the same as the retailer does with his customers. If a broker bought goods for a number of dealers it would be necessary for all to handle the same grade of goods, for if they did not the broker would not be able to buy in larger than retail quantities and could not get the quantity prices; we all know that some dealers want Black Diamond files, and others Nicholson, and others Disston, and so on. This will hold good on all other lines. How would a broker ship? He would have to ship each order separately and the freight would be too high. If two or three dealers in the same town would combine their orders on the same lines they might save something on freight. But it will be necessary to have a few love feasts in most cities and towns before that will occur. As a general thing competitors prefer different lines and I think it advisable on special goods at least. One broker would not do. It would be necessary to have a buyer in every manufacturing and jobbing center, for it must not be forgotten that a great many manufacturers are also jobbers. The truth is the broker scheme would simply be an unnecessary expense, as it does not get away from the trouble of not being able to get more than one line from one factory. Hence the retailer would save the broker's salary by being his own buyer. Another great saving to the retailer by buying from jobbers is in not having to carry a large stock. A retailer a short time ago said he did business on the jobber's capital. In other words, by buying from the jobber in small quantities he could turn his invested capital from six to seven times a year. It is possible for a retailer with an investment of $5000 to sell twenty or even thirty thousand dollars worth of goods in a year. If he bought in large quantities he would get a good part of his capital tied up in unsalable goods or goods that did not sell readily; with the result that he would not have money to buy such goods as do sell readily. In Ohio at least any retail dealer can get goods within twenty-four hours after ordering.

I know of instances where orders have been telephoned to be sent by express, and the customer twenty-five miles away would have the goods on his counter inside of an hour and a half. If jobbers are to be used only for emergency orders they would have to go out of business. And there will always be emergency orders. Some one must be able to fill such orders, and that person is the jobber. I know a retailer who would not carry binder twine for one season in order to let the farmers in his territory know what a necessity he was. The farmers bought their twine through the grange. As the crop was large they did not have enough twine, and went to him to get enough to finish their harvest. He said: "I don't carry binder twine. As you bought through the grange I did not think it necessary." The farmer said: "What are we to do? We are out of twine, and must have a few balls." The merchant said: "I am sorry (he wasn't) I can't help you out." The result was they had to drive nearly fourteen miles to get a few balls of twine. The next year they promised him their trade on binder twine.

In conversation with the representative of one of the largest manufacturers of guns in England, he said that his selling price was based on 2 per cent. for salary and expense, and that it was a profitable line for him. He had several bona-fide orders for one thousand guns and one for three thousand. He only makes one trip a year on guns. You can readily see that his 2 per cent. is not a bad thing. If he sold the guns in small quantities he could only make a small part of the territory, and would be lucky if he sold as many guns to all the retail trade he would have time to visit as he does to some one large jobber.

A large retailer in Columbus said, when he first read the Spalding announcement, he was more pleased to know that he would be able to buy their goods direct from them, but after looking at the matter from a practical and convenient standpoint he had completely changed his opinion. His reason for so doing was on account of the inconvenience in assorting up his stock. Heretofore he bought his goods from the party with the right price, and, if he got out of a certain kind of a base ball or other article, he sent down town and bought just what he wanted. Now, if he only wants a half-dozen balls or one catcher's glove, or any little thing in Spalding's line, he must make out an order and send to Chicago, and have it sent by express or mail, which will in some cases be more than the cost of the goods. He also said that it was hard to tell what would sell in the sporting line from one season to another, and he would no doubt get an overstock on some goods and not enough of others. He said, after taking these drawbacks into consid-

Digitized by Google

eration, it was a bad thing for the retailer, and he hoped it would be of short duration. I do not believe there are many retailers who want to see the jobber out of the deal, and I am sure the majority of retailers class the jobber among their most profitable friends.

The trade of the world is a net work of detail and must be classified to be handled economically. The manufacturer makes the goods and sells them in large quantities on a very small margin of profit to large distributors in large trade centres. The jobber gathers together under one roof goods practically from every civilized country in the world. The retailer has this complete assortment to draw from in such quantities as he needs and such goods as are adapted to his customers' wants, and the retailer's customers have a well-assorted stock of such goods as they require to supply their wants. I cannot conceive of any more satisfactory, economical or convenient way of distributing goods. If any one can show a better way of marketing goods than is now in vogue I would be glad to know it. The consumer cannot get along without the retailer any better than the retailer can get along without the jobber.

J. H. Smith,
Columbus, O., April, 1899. Smith Bros. Hardware Co.

Net Prices in the Jobbing Business

Editor Hardware: One generation passes away, and with it disappears many of its time-honored methods and customs. The young men of to-day will be the old men of to-morrow, and when they give place to the succeeding generation, they will, no doubt, shrug their shoulders, just as their fathers are doing now, at the innovations brought forth by the rising generation.

Each generation feels that the "boys" will not be able to carry on successfully the large interests which will descend to them, and so hold on, as long as they can themselves, forgetting that with the business, the sons may also inherit the father's shrewd business ability.

The world moves and business conditions greatly change. If the young blood brings with it a thorough knowledge of the times, and an insight that enables it to grasp the needs of the times, then the future is assured. A few years of success, and the elderly doubters are heard to remark, "The business still moves on, after all," and it is then that they begin to realize how a man's work lives after him. The undertakings to which they have given many years of study and the best part of their lives, will continue to "move on," because of the momentum which their own thrift and energy has given the business. They should be thankful that the success of any business does not hinge upon the life or death of any one man; that there is a higher power that controls not only the destinies of men, but the success of any business.

It is not hard to understand why the older business men shake their heads doubtfully, as they see the lists and discounts of yesterday give place to the net prices of to-day.

At the present time there are more goods sold at net prices than ever before in the history of the Hardware business, and this tendency is increasing year by year.

In the hurry and rush incident to the retail and jobbing business of to-day, net prices are a necessity.

Both retailer and jobber know what they can get for certain goods, and want to know from the seller, not the list and discount price, but just what the goods will net them on board the cars in the seller's city.

Often do we hear the retailer say to the salesman, "Life is too short to figure out that long discount. What will that size cost me net?" Another common expression heard by the traveling salesman from the retailer when he quotes him a discount selling price, is: "Oh, pshaw, what does that make it net?" and it is becoming a habit with the jobber's buyer to say, "Let us see, what does that make it net?"

The successful salesman must be in a position where he can quote both list and discount, or a net price, as the buyer desires, but he will find the average jobber demanding net prices of the manufacturer and the retailer in turn, wanting his quotations equally simple, thus proving the assertion that net prices are the up-to-date basis for merchandising and are used because of the demand for them.

These assertions particularly apply to certain lines of goods which, in late years, were sold by manufacturers to jobbers, and, in turn, to retailers at list and discount, and are now sold almost entirely at net prices.

To this class belong lines made up of the great varieties of patterns and sizes; articles where a new manufacturer has come into the field making only the staple sizes, which necessitated the older maker selling part of the lines at one discount, and part at another; articles made of raw material in which the price is constantly fluctuating, and those in which the raw material makes up a large percentage of the goods, the cost of labor to produce them being only nominal. It is not necessary to enumerate these goods, as they will readily occur to the mind of the reader.

It is very apparent to anyone in touch with the Hardware business that net prices are rapidly displacing list and discount, and it is but a question of time when increasing competition will force manufacturers and jobbers alike, to do business on such a slender margin that the broad and generous all-round discount from list, used so largely by our forefathers in amassing their fortunes, will be a thing of the past.

Business will be done on such a slender margin that a few odd cents per dozen on a certain size, owing to the increasing quantities sold, will mark the difference between a reasonable profit and a losing business.

Wants a Receiver Appointed.

The following information in regard to a concern in Philadelphia is from a recent issue of the *Record* of that city: Application was made on Tuesday last to Vice-Chancellor Reed, at Trenton, for the appointment of a receiver for the Pancoast Ventilator Co., in behalf of judgment creditors, who have been unable to secure payment of the debts due them from the company. This company was organized three or four years ago, under a New Jersey charter, for the purpose of manufacturing and selling patent ventilators. It has a nominal office in Camden, and its principal office is in the Bourse Building, Philadelphia. Joseph C. Henvis is its president and manager. Pending the result of a hearing, the company was restrained by the court from contracting any debts and collecting or receiving any money due it, or from paying out any money or selling or assigning any of its property.

Wise Sayings.

VIEWS OF A MAN IN THE CORNER.

Editor Hardware: How does the Hardware Jobber's future look to a Man in a Corner?

"It takes a fool or a philosopher to build a fire," my mother was wont to say. "A fool will succeed by accident, a philosopher by reason." And the same rule will apply with equal felicity to the making of prophecy. A fool may, through sheer impudence of invention, achieve a triumph equal to that of the philosopher who carefully balances factors and tendencies, and arrives at his conclusions by logical processes. Whatever the result, both sage and simpleton find here a common meeting ground, for the wiseacre who is so incautious as to risk his reputation by speaking confidently of a future yet unborn, basing his conclusions upon the unknown or dimly perceived influences of the present, shows somewhat of folly, while the fool must mask his utterances in the language of the wise in order to obtain for them credence. Whether the following be foolish philosophy or philosophic folly, the reader must judge for himself, and his decision will doubtless be correct, whichever way it goes. He who forecasts the future is playing with loaded dice, anyway.

If I seem too didactic or positive in my statements, it is not that I am unduly certain of their correctness, but that it is too much trouble to continually hedge against error by carrying through the argument a burden of "ifs" and "may bes." So here's to it!

THE PROPHECY.

The immediate future of the wholesale Hardware business is going to witness a revolution in methods that will be to the betterment of the trade. It will result in the bulk of the business being done by a few very large corporations, who will give to the retail dealers an excellence of service that will make it to their loss to buy outside the established channels, and they will handle the product of the factories in so satisfactory a manner that the manufacturers will be well content to confine their sales to the wholesale houses. The process of rehabilitation will force many of the weaker and smaller houses out of business, and others with large and prosperous retail stores, whose profits will balance the losses of the wholesale departments, will conduct a losing fight for existence. But the few who thrive and succeed will be mighty in their day and generation, and will be long known of men for their power and enterprise.

BETTER SERVICE.

It is not to be expected that the Hardware jobbing business can be held aloof from the influences that are overturning and transforming trade in other branches. It is not to be believed that while the manufacturers are straining every nerve to increase their facilities and lessen their costs, and while the retailers are clamoring for cheaper goods with which to hold their own against each other and the department stores, that the jobber can pursue his peaceful way unmoved. If nothing else would cause him to seek out new and better ways, the constant increase in competition would alone work most effectively to that end.

The jobber must grow or decline. There is for him no such thing as merely holding his own. He must give better service than his competitors in the surrounding cities or find his territory bounded by the nearest jobbing points. He cannot expect to overcome the influences that are tending to localize the wholesale trade without having something to offer superior to anything that can be given to the nearest big retailer ambitious enough to send out a man to get orders from the smaller dealers. He cannot expect that they will buy from him in preference to houses nearer home without some inducement to do so. As the boundaries of his territory expand, and as he sends his men farther and farther afield and into cities of larger population and greater influence, he must increase his ability to serve the interests of his clients so as to give them some advantage to compensate for the longer time required to get goods and the other inconveniences entailed by the greater distance—a larger assortment from which to choose, better brands, lower prices, quicker shipments with each order complete, a financial method that will secure payment without antagonizing delinquents, and a feeling of personal friendship assiduously cultivated, that shall turn the trembling balance of the dealer's favor in his direction when other things are even.

The growth of the country presses upon the jobber opportunities which he must improve. Freight in Boston is only sixty hours from Chicago. The long distance records in all branches of transportation are constantly being broken, and under the continual pressure of various commercial bodies and the weight of competition local freight service shows never ceasing improvement. The extension of the telephone and telegraph service, the upspringing of a network of electric suburban lines with package deliveries, the improvement of the water ways, the rapid and continual growth of the great railroad systems—all make their demands upon the jobber which he must meet or see his competitors outstrip him and find himself numbered with those who are on the decline. Since the delay in receipt of goods cannot well be charged to the carrier, it is incumbent upon him to get the goods out of the house with all diligence to escape condemnation by his customers. The big jobber of the future will keep his stock replete, and his system for caring for orders will be such that no freight order is unfilled for more than twenty-four hours, while the mail and express orders will be shipped by the first train after receipt of the requisitions. He will not count as needless expenditure any outlay for hire of men, cost of equipment or investment in complete stocks, which shall contribute to the speedy and satisfactory filling of orders.

DIRECT SHIPMENTS.

He will need more money to carry on a business of the same magnitude than is now required. There are many goods now shipped direct which he will take into his warerooms and ship from stock. He will be forced to do this, partly by the need to make quicker time in delivery, and partly to get the bottom prices on lines where the manufacturers regulate the price by the size of the shipment. Wire, nails and gas pipe must now be bought in carload lots to insure the jobber even a trifling profit, and tin plate cannot be bought from a mill except in carloads. As manufacturers of other lines of goods gain strength for united action by combinations and consolidations, it is only to be expected that quantity restrictions will be imposed that will make it necessary for the jobber to carry his own stocks and keep his business upon a purely wholesale rather than a brokerage basis. It is to be hoped that the influence of the jobbers will be powerful enough to induce such manufacturers to leave a margin between bulk shipments and retail lots that will afford a decent profit for the handling. The chance for such an improvement will be greatly increased with the thinning of the ranks of the jobbers, and the placing of the business in the hands of a few

Digitized by Google

long-headed, keen-sighted men who can be trusted to maintain any price limits set by the manufacturers.

THE SMALLER HOUSES.

I have said that the smaller houses will be forced to the wall. I should perhaps have stated that they will be outstripped, for the coming jobber will not go out of his way to injure them. He will simply improve his methods and enlarge his scope until the smaller houses will be so far outclassed that they will have to step aside. There will be no room for them in a business conducted on so great a scale and so largely upon a quantity basis. With them will go many of the reprehensible and embarrassing features that now afflict the trade—the quoting of prices below cost on single items in the hope of recouping on others; of quoting simply for effect after the orders have been given to competitors, and other irregularities which usually result from shifts by smaller houses to lessen the influence of their larger competitors. Then, too, will come an end to the indiscriminate return of goods by retailers and the other profit-destroying practices in which many of them are now wont to indulge.

THE LARGER HOUSES.

The coming jobber will take for his watchword "System!" and his establishment will be as a vessel stripped for a fight, with no superfluities, no idlers, no operations done by three motions that can possibly be done by one—a vast commercial engine with brain for its motive power. His work will be a constant struggle for improvement—a lopping away of everything that is unprofitable, whether it be lines of goods, methods of work, or men who have seen their best days. There will be no room for either tradition or sentiment in his business. He will demand the best work of men at the time when they can accomplish the most, and the survival of the fittest will prevail in his establishment as completely as in his relations with his competitors. His greatest fear will be that somehow or somewhere he has fallen short of what he might have achieved, and in his superior ability to cater to the wants of the dealers will he find his triumph. He will deal in superlatives only.

ONE READS OCCASIONALLY

that the jobber's power is waning. At one time the syndicate buyer was to wipe him utterly off the earth; at another the manufacturer would deal direct with the retailer and ignore him; again, the manufacturers' sales agents in the various centres of trade were to take away his customers; and again the catalogue houses and mail-order concerns were to knock everything galley-west. But despite all influences that would work him harm the jobber has grown and thriven, and there is no prospect, so far as I can see, that he will be superseded or will occupy a less important place in trade economy. Quite recently utterances by retail dealers in the various conventions have demonstrated the high estimation in which the jobber per se is held by the men whom he serves, and that he is considered by the persons most interested to be an indispensable part of the present commercial scheme. So long as he is of use he will thrive. When the need for his existence is over he will be no more. That that day will come does not now seem possible.

SOLELY RESPONSIBLE.

Now, these are simply my own ideas upon the subject, without suggestion, approval or criticism by anyone. I might have indulged in glittering generalities and predicted a rosy-hued era of prosperity for every jobber along present lines, but I prefer to state the question plainly and frankly as it appears to me, and the reader can accept or reject such portions of the argument as it suits him to do.

April 1, 1899. J. B. Comstock.

[Mr. Comstock is the author of the "Letters from a Corner Desk," published now and then in *Hardware*, which accounts for the above caption.—*Ed. Hardware.*]

Distribution of the Product.

Editor Hardware: The method of the distribution of the product of the manufacturer differs with the environment.

In a market like England—compact population and abundant railroad facilities, the jobber is almost unknown.

In a newly settled country with a broad expanse of territory and limited railroad facilities, the jobber is a necessity. The latter conditions have heretofore prevailed in this country, and here we have had the jobber, the wholesale dealer and the retailer or distributor with a fairly good profit to each Under these conditions there are, of course, four profits: First, the manufacturer; second, the jobber; third, the wholesaler; and fourth, the retailer. Now, each and every one of these factors in the distribution of goods has its work to do, and consequently is entitled to fair recompense in the share of profits. The manufacturer has in his line all that he can properly attend to in the varied duties and qualifications required to successfully produce the goods. This is simply on the principle that as in medicine, a specialist who focuses his mind on the eye, for instance, must be more scientific and intelligent in his treatment of that organ than the family doctor who treats all diseases that the flesh is heir to. The manufacturer, therefore, would naturally prefer to dispose of his product to a few large jobbing houses. Now, the jobbers are in the same relative condition as to the wholesale trade, and prefer not to go to the dealers, and so on. The present system would, therefore, naturally go on by mutual consent for some time to come, were it not that a disturbing influence comes in to break up this harmony of action. This disturber of the peace is no other than Mr. Competitor, who was once considered the life of trade, but whose downfall is now attempted by the many consolidations that are taking place. Competition has forced manufacturers to reduce their prices so as to secure to them a very narrow profit. Competition has forced even the retailers in some cases to pass by the middlemen entirely and endeavor to purchase direct of the manufacturer. The department store illustrates the situation. They purchase direct of the manufacturer. With their large orders and spot cash, it is no wonder that the manufacturer gives them at least as good, if not better terms, than he does to the large jobber. This also illustrates the statement made at the beginning of this article, that the more condensed the population, the more the tendency to do away with the middlemen. In large cities like New York, Philadelphia or Boston, the department store distributes the goods direct to the consumer, while in the far West, with scanty population and limited means of conveyance, the consumer has four profits between him and the manufacturer.

This evidently shows that as the country grows and means of transportation are extended, that the middlemen, one after another, must go in their natural order, the first being the jobber. D. O. W. N. East.

Officers' Quarters and Barracks, Cuba.

Merchant & Co., Incorporated, Philadelphia, New York and Chicago, have recently received an order from the War Department for 786 of their Galvanized "Star" Ventilators, for use on the officers' quarters and barracks to be erected at Havana and Matanzas, Cuba. There will be 587 "Star" Ventilators, 24 inches diameter, and 199 14 inches diameter. Great promptness is necessary in the delivery of these "Star" Ventilators, which the exceptional facilities of Merchant & Co. will enable them to accomplish. Some idea of the size of the order can be had when it is stated that if these Ventilators were placed in a line with their edges touching, they would cover a distance of nearly half a mile. Within the last few months Merchant & Co. have also supplied 500 18-inch Ventilators for the new Government hospitals at Fortress Monroe and Savannah.

Inroads of the Department Stores.

Editor Hardware: Retail Hardware dealers in the large cities of our country have keenly felt the inroads made in their business by the department stores. We hope it will be less apparent with the advent of more prosperous times, and a desire on the part of the buying public for a better grade of goods.

Possibly the retail dealer has himself to blame for the loss of that portion of his trade that has gone to the department stores, for he must confess that they carry larger stocks which are well displayed with prices marked in plain figures. He will find on examination that he can meet nearly all their prices at a profit to himself, except at such times as when they make a leader of goods at or below their cost.

They advertise freely in the daily papers, and we regret to say very few retail Hardware dealers do. It would be well for him to emulate their example, especially in this respect; in fact, he must revise many of his methods of doing business, divide his store into departments, carry in stock more of the goods that are selling daily.

He must make his window displays more attractive, and should mark the price on each article displayed. He had better show only one line of goods in his window at a time and this should be changed frequently.

The store should be kept clean and well lighted. Old samples should be replaced by new ones. Novelties and new goods should be displayed where they can be readily seen.

In the individual store, the proprietor has the advantage of coming in contact with his regular customers, and his expenses for doing business should be of a less percentage than the department store. If his capital will not admit of his dealing in a number of lines, he had better confine himself to one line and have his store known for keeping the best of everything in that particular line.

We regret the growing tendency of manufacturers of building Hardware to sell direct to the builders and owner, to ignore the Hardware dealer who has for years carried his stock and who is his customer all the year round.

ALFRED P. SHANNON,
Philadelphia, Pa. J. B. Shannon & Sons.

Ethics of the Hardware Business.

Editor Hardware: Cruelty to an enemy, an eye for an eye, was inculcated by mediæval theology, and competition in business was based on this principle. Ruin to a competitor was legitimate method to success, but moral sentiment has modified theology and given a better definition of manliness.

Business organizations are beginning to grapple with greed in business methods; right is not measured by might as fully as it once was. Individuals are more amenable to the influence of the moral sense than corporations are, who are said to have no souls, so that the craze for combinations may hinder the process of eliminating the cruelty of competition. Nevertheless, the change towards improvement has been manifest.

Trade organizations have been potent influences in creating respect and friendship among competitors. Friendship has taken the place of enmity and frankness the place of duplicity. This has been an immense gain.

One of the strongest evidences of the fraternal spirit is that the wealthy houses heartily co-operate with others of more moderate means in an attempt to help all. The kindly spirit shown towards manufacturers is another evidence.

The National Hardware Association has never been actuated by the greed of selfishness—its entire purpose has been to provide honorable, business-like methods, beneficial alike to those who sell them, and to those who purchase from them. Improved business methods that a few only of the houses were using, have been freely given to all and adopted by the members.

Ethics in business has from the beginning, and is, the foremost theme of discussion. The change in feeling could not be believed by those who have not been a part of it.

The strong houses have shown a desire to help the smaller ones, in a way that puts to shame the arrogance, egotism or selfishness that has prevented a few houses from joining the association.

Hardwaremen are among the very best of the mercantile class—honorable, intelligent and wideawake, and they are pushing the ethical standard to the front. There has been a great change for the better in the past twenty-five years. The increased feeling of brotherhood has greatly modified the meanness of competition. No one now assumes to have the exclusive right or the exclusive ability or capital to do business. The spirit of manliness is increasing, and nowhere is it more manifest than in the National Hardware Association. This increasing sentiment will affect the large combinations who care for the co-operation of the best business houses.

The Hardware jobber is sometimes accused of being tricky, but such charges usually characterize the one who makes them.

Unjust accusations may suggest revenge, but its usual effect is to create a feeling of indignation. If integrity does not exist, it must be simulated to secure success. The very first requisite is honor for a successful merchant, and the young man in training for a business life is very sure to imbibe it. It is almost an axiom that the higher you go in business, the sense of honor increases. Dickering and misrepresentation are entirely foreign to the higher business life.

The mere morality sometimes denounced from the pulpit is the fundamental principle of greatness in business.

Peculiar circumstances may put an unworthy man at the head of large business, but this is exceptional and usually ends in disaster. The safety of the State and nation rests in the integrity of its citizens, and the business men stand second to no class in making and sustaining this foundation.

C. B. LOCKWOOD,
Cleveland, Ohio. Lockwood-Taylor Hardware Co.

The Packing and Cartage Question.

Editor Hardware: The anniversary number of *Hardware* is expected to have the very best efforts of its contributors. The editor desiring to make this literary structure symmetrical, elegant and imposing as the material he has to do with will justify, has selected the subject for each writer, so that the articles written will be best adapted to he positions assigned in this literary edifice. In operative buildings, unattractive materials are used for the foundation, and though unsightly, they are necessary, and any way they are soon to be hidden from view by the superstructure which will be composed of elegant material, richly carved, finely polished and handsomely gilded. Packing goods is one of the first "rudiments" taught the beginner in stores; always the hardest work and the least appreciated; this is true, for I have had it to do. In *Hardware's* literary building I have been assigned the position of packer and drayman.

The importance of skillfully packing and carefully hauling goods from the stores to transportation depots is admitted by all good merchants. That it is a large item of expense, there is no doubt. That this expense should in some way be paid by the buyer who alone is benefited, there is no dispute. We complain of our excessive expense accounts, and yet here is one of the largest items we have to pay, an item that probably amounts to as much or more than the rents of our stores and warehouses.

Digitized by Google

What, then, is the best and most equable method of getting returns for this enormous expense? Until recently, since the beginning of commercial time, the cost of packing and carting has been regularly charged and entered on invoices. These charges have been honored and paid. The courts have recognized them as legitimate. In short, they were just. Suddenly and unexpectedly to the trade, some of the Hardware jobbers, with a flourish that savored of a desire for free advertising, rushed into print with the announcement that thereafter there would be no charge for packing or carting, and intimated that it would be given absolutely free to patrons. A most generous gift, indeed, or an admission that profits had previously been exorbitant. Many Hardware houses who had been content with smaller profits regarded the change as a temporary cut in prices and met it accordingly. The blunders of the past cannot be recalled; what the future will develop cannot be foretold. The present conditions alone are to be considered. The annual dividends are certainly less as the result of the new method. Any attempt to get pay for this item by surreptitiously adding to the selling prices would prove futile and be regarded as unfair, unmerchantable, if not dishonest.

To absorb it in the general expense account and trust to obtaining a greater profit on sales, would be prevented by competition and the intelligence of buyers. Even if accomplished in this way, it would be unjust, as the percentage of the cost would vary so much on different articles. The departure was a mistake. It has proven unpopular. Many who impulsively adopted or followed the change, regret it. No one has been benefited Larger direct shipments with less net profits have resulted. Dealers have more frequently over-bought; tardy collections and occasional failures have ensued. The retail dealers did not ask for its discontinuance, and now would rather see it restored, that they may know just how much they are paying for this item, and what the comparative charges are of the different jobbers from whom they buy. They do not want or appreciate a present of a dray ticket or packing box. It would, therefore, seem that the best way to get returns for the large amount of money invested in boxing and carting would be to return to the custom of our fathers of openly and honestly making a direct charge on each in voice for the cost of same. We pay for packing and carting all through life, and the first bill that will be presented to our executors after we cease to live will be for case and cartage.

J. R. Nutting,
Sickels, Preston & Nutting Co.

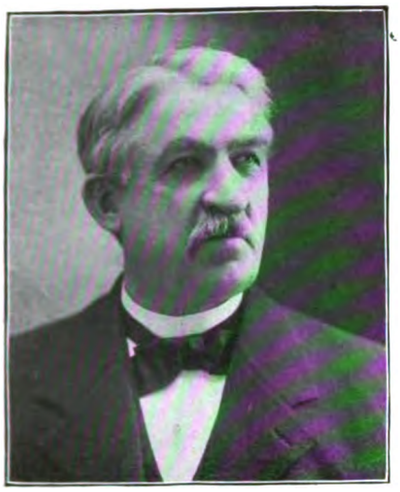
Davenport, Iowa.

In Honor of Peter McCartee.

As was mentioned in the recent issue of *Hardware*, the board of governors of the Hardware Club of New York some evenings since presented to the retiring president, Peter McCartee, a handsome testimonial of their love for him, and their appreciation of his long and faithful services as president of that great organization. Owing to a lack of space, we were unable to reproduce the presentation speech made on that occasion by Alfred D Clinch, and are pleased therefore to lay it in full before the readers of *Hardware* to-day, as follows:

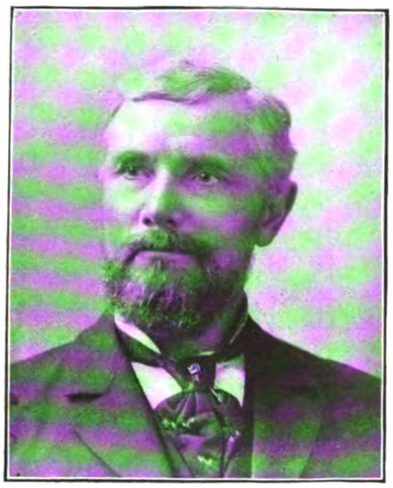
Mr. McCartee: It was my privilege a few weeks since to visit the neighboring City of Brotherly Love, and attend a banquet given in honor of the ex-president of the National Hardware Association by the manufacturers and Hardware jobbers of Philadelphia. It was an inspiration to listen to the words of praise of his business integrity, and the esteem in which he is held by his competitors in his own line and business associates of other trades. To-night we are gathered for a like purpose—to honor one who is loved by all who know him. When I entered on my business career I learned the name of Peter McCartee. Later I learned by observation, who possessed the name; later still by personal contact in business, but not until I learned to know him by the closer ties of friendship was unfolded to me the inner self which has grown into one of the pleasantest relations among my many genial business associates. During all this time there has been no doubt of his word, and his career has been one to stimulate me in the conviction that honesty in life brings its own reward. We to-night are gathered because of our interest in him who lays down the gavel as president of the Hardware Club, and we all appreciate that in taking it up his successor has been made to assume a heavy task because of the dignity and social qualities his predecessor possessed. But I must stop, for each one present has in his heart words to which he wants to give utterance; but before I close let me say that to me has fallen the most happy duty of presenting to you on behalf of my associate governors this testimonial of their love for you; and may I say in your presence that mizpah to which you have so often listened: "The Lord watch between me and thee, when we are absent one from another." And now, as I extend to you my hand as a token of my friendship for you, let each one here gathered have the opportunity to do likewise as you circle this board around which we are gathered.

The Correspondents of "Hardware."



On the page fronting this, and on the two succeeding pages, will be found the portraits of twenty-four gentlemen who constitute the regular staff of correspondents of *Hardware*. The student of physiognomy can judge something of the intellectual and moral fibre of the gentlemen who send news to *Hardware* twice each month, from all sections of this country, by a study of these faces We do not wish to serve in any way in the role of a flatterer, but the readers of *Hardware* will bear us out in the statement, that a finer, brighter, more interesting and capable lot of men, were never gathered together in one group of twenty-four, in connection with the Hardware or any other trade, than is shown on the three succeeding pages.

These gentlemen are true representatives of the Hardware industry of this country. They are connected with the leading Hardware establishments, and the letters which they send to *Hardware* are justly regarded as among the most important contributions to the trade literature of the present day.



Hardware has many reasons for congratulating itself upon the success which has attended its efforts for the good of the Hardware trade, but in no respect does it feel that it has cause for greater pleasure, than in the fact that twenty-four men as busy and as prominent as those represented here, find time, twice each month, among their many heavy business cares, to let the world know, through these columns, what is being done by and for the Hardware trade in their section of the country.

Cienfuegos, Habana and Santiago de Cuba are the only towns in Cuba having cable connections.—*Exchange.*

Hardware Notes By The Way.

The volume of business done thus far this year precludes any disquiet as to the future outlook. The improvement is steady and of a substantial character. The improvement is also general. Movements in agricultural implements have been exceptionally heavy, and the demands for builders' hardware will be the largest for many years, to judge from the plans and specifications now in the hands of the architects.

The cycle season has opened with a big spurt, and sales will be enormous. Prices are the lowest in cycle history, but the larger percentage of cash sales has not rendered the line devoid of interest.

The revitalized roller skating sport has reached a degree of popularity during the past winter that leaves broad hopes for next season. Rural amusement caterers seem especially interested.

The season in carpet sweeping and house-cleaning devices is never over nowadays. It seems the hardware merchants have become fully alive to the importance of the line, probably superinduced by the aggressiveness of the manufacturers themselves, such as the Bissell and Goshen people. Frappant window displays is the one popularizing feature that never lacks interest. Manufacturers in every line of household utensils have at last grasped the importance of window-dressing features, and the merchants have been brought to appreciate and recognize this scope of enterprise to the point of imitation. I have learned of several merchants that window displays have increased sales fully 50 per cent. during the past few years. Carpet sweeping contests, the latest trade getting feature, have likewise proved very valuable. This scheme is not clearly defined, but it seems merchants who are bidding for desirable trade have undertaken to give rival exhibitions at hotels, rooming houses, office buildings and private residences, the sweeper that does the work the quickest and neatest to be awarded the contract irrespective of other inducements.

Said a merchant: "Queer how a little spurt in the egg market such as we experienced this winter when prices went 'way beyond a hen's horizon, will induce speculative enterprise. Why, we never sold so much poultry netting. It seems every farmer with a huckleberry patch was going to start a hennery."

Soon again the foolish merchant will advertise non-burst garden hose, and run the chances of being stared out of countenance at every turn, snubbed in society and abused like a hod-carrier, just because that garden hose bursted just the same. While there is garden hose that is guaranteed by manufacturers not to burst it's always safest to urge the buyer to make allowances for accidents, incidents and co-incidents, a series of which always surround the garden hose in goat-infested neighborhoods and elsewhere.

The human eye is craving for spring-time verdure and probably the first step the proud lawn owner is liable to make these mild mornings is to inspect the complexion of his lawn. A case came to my notice, even more exemplary. The owner of a beautiful lawn expanse at Cleveland recently invited his friends to inspect the adolescent grass tips at midnight by means of lanterns and candles. Profiting by this characteristic, some merchants have improvised lawns in their windows, using mowers and other paraphernalia as trimming. It imposes as a very clever advertising departure.

A pioneer citizen, a typical penny-squeezer by appearance and reputation, recently entered the store of a Detroit merchant, and was given a lead pencil bearing the firm's name with his purchase. "And what may be the value of this pencil," interposed Mr. Pennywise. "It's Dixon's best, and worth a nickel," replied the merchant. "Well, as I have no use for lead pencils, and you want to give away a nickel's worth, I'll take a pound of nails." The merchant was stumped, but Mr. Pennywise got the nails.

The Hardware clerk during busy season is a very much overworked individual and is more subject to brain fag than most other store workers. Necessary recreation is often out of question during the winter months. The heated term is practically the only period within a busy twelvemonth that offers equitable opportunities for vital recuperation, and no employer ought to be parsimonious in making vacation allowances at that period. Merchants are now commonly doing it, and the amicable understanding resultant therefrom cannot be easily reckoned in money.

Said a Pittsburg manufacturer: "Yes, there are a number of salesmen whose commissions amount to $5,000 per year and up. They are past masters in salesmanship, princes of goodfellowship, or control some monopolistic specialty. Of the latter class, C. B. Turner, who sells the mechanical boiler cleaner of a North Manchester (Ind.) company, probably earns larger commissions steadily than any American traveller extant."

"A spring full of life and even temper, is the standard spring. Full of life and even temper is the spring from which the standards flow. The spring full of life and even temper has no snap. The man full of life and even temper is all snap. A spring and a snap, kills the spring. A man and no snap, kills the man." [From the diary of a deceased traveler.]

If horseless delivery wagons and automobile trucks are to be added to the stock of the Hardware merchants, why not doing a little introductory work by using these vehicles themselves? Will cartage expenses be materially reduced by their use? Answer this question to the satisfaction of the Hardwareman, and he'll sell out his horses and wagons without much further parley.

Cleveland, March, 1899. J. B. Rindfleisch.

Buying and Selling.

In a catalogue issued by one of the most prominent boot and shoe houses in the United States there is to be found the paragraph which is quoted below. It expresses an established business fact in such terse and clear language as to commend it to business houses generally. It would be well if all jobbers and manufacturers were to adopt similar terms, and to print a statement of them upon their order blanks, billheads and statements of accounts, as well as in their catalogues. The paragraph referred to is as follows:

"Our terms are positively thirty days net or 2 off for cash in ten days. We will not do business on any other basis, for we know that the retailer's success depends as much upon his buying as upon his selling, and that long-time buyers are at a disadvantage. We prefer to deal only with those retailers who sell successfully, because they buy successfully."—*Exchange.*

The first iron rails that formed a continuous line from tidewater to the Ohio River were laid forty-seven years ago and the work was completed on Christmas eve, 1852. The completion of the laying of the iron rails, steel being too expensive at that time, is marked by a natural monument, eighteen miles from Wheeling, and near Roseby's Station. This monument is a great stone on the hillside, and is located in Marshall County, West Virginia. It is sixty feet long, thirty-five feet wide and thirty feet high. Commercially minded men have estimated that it is worth $200 for building purposes, but it could not be purchased because of its historical association with the completion of the main line of the Baltimore & Ohio Railroad. Cut deeply into the side of the rock that faces the railroad track is the following inscription: "Roseby's Rock. Track connected Christmas eve, 1852."—*Iron and Steel.*

Practical Talks on Files.

We continue from advance sheets our extracts from the Practical Talks on Files, the latest book on the subject, and which, as soon as completed, will be mailed free to any dealer in files whose name has been forwarded to the manufacturers. This extract has reference to draw filing:

VI.

The term "draw filing" refers to that use of the file in which the direction of its motion over the surface of the work is at right angles to its length. In draw filing the file is grasped by its ends with both hands, as shown in Fig.

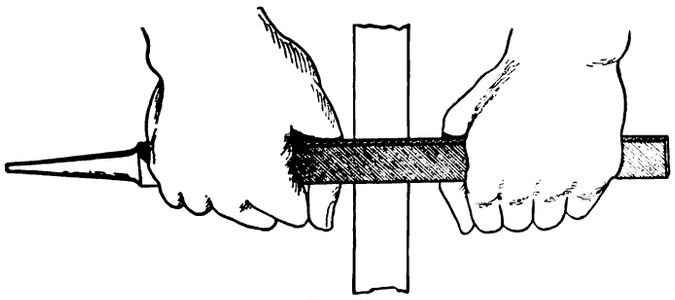

FIG. 21.

21. The handle is usually removed, as the file cannot readily be controlled when one hand grasps the handle.

As the belly of the file can be brought to bear on the high spots more readily and under better control than in cross filing, more accurate results can be obtained by draw filing, even by a less skillful mechanic. For a given pressure, the file in draw filing does not cut so deep or remove so much metal as in cross filing. It is not, therefore, well

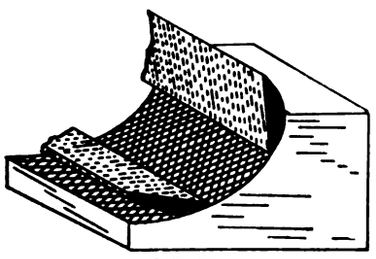

FIG. 22.

adapted to the quick removal of large amounts of metal, but when an accurate surface or a finely finished one is required, it can best be obtained by draw filing. The grain or lay of the finish produced by draw filing will be in the direction of the strokes, and much finer than can possibly be obtained with the same file in cross filing.

When a surface is to be reduced wholly by filing, a second cut or a smooth file should be used in cross filing to

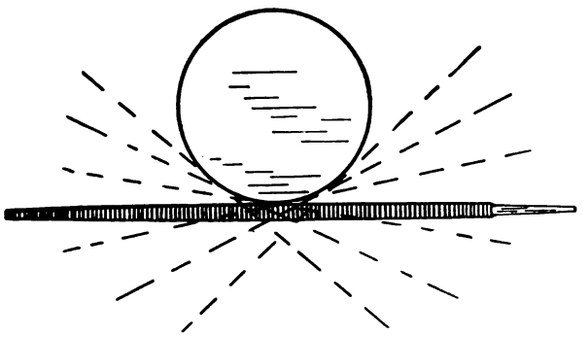

FIG. 23.

remove the deep file marks made by the rough or bastard file, which is used to remove the bulk of the metal, thus producing a smooth surface for the final draw filing operation. A file coarser than a second cut is not suitable for draw filing.

In modern practice nearly all surfaces that are to be finished are machined smooth, true and practically to size, so that draw filing alone will remove all tool marks and prepare the surface for polishing, or scraping, if it is to be an accurate bearing surface. In general, machined surfaces should be filed as little as possible in producing the required finish. If filed too much, the surface becomes untrue, and can be brought back only at the expense of much time and careful work. It is very important in machining surfaces that are to be accurately finished by filing to make the finishing cut a light one, with the cutting tool so adjusted as to leave a smooth, true surface, and thus requiring the minimum amount of filing.

After draw filing, the surface is usually given a finish by rubbing it down with fine emery cloth and oil. For this operation the emery cloth is secured to a narrow block of wood, or wrapped around the file. In either case it is given the same motion as for draw filing. When a very fine finish is desired the surface is first draw filed in the direction of the lay of the final finish, with a smooth file. The direction of the strokes is now changed to right angles, with the required finish, a dead smooth file being used. This latter cut seems to level off the tops of the small ridges left by the first filing. The final finish will be obtained by rubbing the fine emery and oil over the surface in the direction of the first filing. A piece of clean leather, charged with washed emery and oil, is excellent for this purpose.

When a concave surface is to be draw filed, the half round smooth or second cut file should be used, as shown in Fig. 22. The file should be rotated slightly in the hands, so as to bring different portions of its surface into action. It is best to give it a small amount of end motion, just enough to cause the file marks to cross each other.

In draw filing convex or cylindrical surfaces, a flat file or the flat side of a half-round file will usually be used. Such surfaces are generally so filed to produce finish only, and when cylindrical truth is required must be very carefully done. As shown in Fig. 23, the file surface in contact with the work is very narrow, and consequently the pressure on the file must be very light. As shown by the dotted lines, the angle of the file with the horizontal should change slightly, yet a uniform amount, with each stroke.

In all draw filing operations the work should be done on the forward stroke, the file being released of all pressure, but not raised from the surface of the work, on the return stroke.

The advertisement of the Arcade File Works, No 97 Chambers Street, New York, will be found elsewhere in this issue.

Pointed Paragraphs.

The dead letter probably died at its post.

But few actresses are as bad as they are painted.

The wages of sin defies alike the hard times and monopolies.

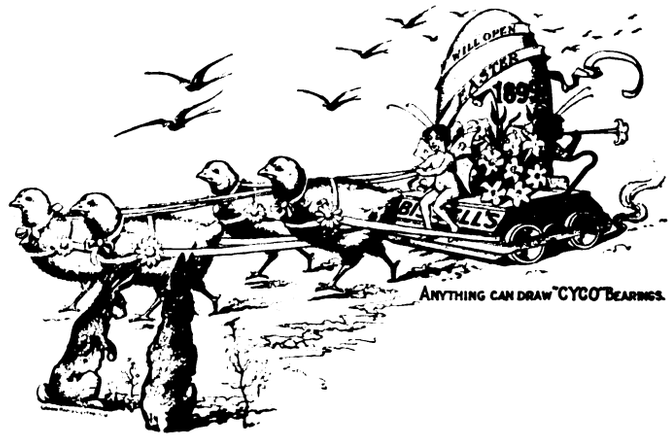
Shall the Manufacturer Sell Only to the Jobbing Trade?

Editor Hardware: Speaking in an ideal way, the jobbing trade is the natural medium through which the manufacturer markets his product. The jobber and the retailer distribute his goods to the consumer more cheaply and conveniently than he can do it himself. Time and experience have developed these avenues of distribution, and, by reason of supplying an actual want, the business of the jobber and of the retailer rests on a legitimate basis. There are certain rights inherent in the business of each which should be respected and upheld. The manufacturer cannot sell the jobber, nor the jobber the retailer, without keeping in good faith the implied obligation of non-interference with the trade which naturally belongs to each of them respectively.

There is no justification, as a general thing, for the manufacturer to sell to any but the jobbing trade. There are some circumstances, but they are infrequent, when the question of quantity has to be considered in relation to this subject. Sometimes a user or consumer has a large quantity of an article to buy, and seeks from the manufacturer a better price than he can obtain through the middle man. By reason of quantity, he is taken out of his natural relations to the retailer or jobber, and becomes the legitimate customer of the manufacturer. If these relations and conditions were duly respected, there might be general harmony, and a fair division of profit all along the line, but unfortunately in practice the situation is very different.

Looking at the Hardware field, in a general way, it is evident that many practices have developed which are reprehensible. The jobber has much to complain of in the course of some manufacturers, and the retailers of some jobbers. It hardly seems fair for manufacturers to reach out for everything in sight of any value, nor for jobbers to sell the retail trade and then compete with them by opening retail stores or retail departments. The retailer also has not only the manufacturer and jobber lying in wait for any good thing which naturally should go to him, but he has other troubles of his own. The disturbance largely comes from the intense competition everywhere prevalent. It is at times almost destructive of good will, fair dealing, or profit.

With the situation as it is, hardly any moral or ethical question will receive consideration. We may say theoretically that the manufacturer should sell only to the jobbing trade, or make some fair and justifiable exceptions, but in practice the question of self interest largely determines the course of any concern in any line. It may be bad policy to work on the principle that might makes right, and to seek profit in all directions indifferent to everybody, and it may be good policy to have a business permeated with integrity, and respect for the rights of others, but in practice each concern will work along the lines which seem most profitable. The personal character back of a business will determine its course. We would therefore say in answer to this question, "Shall the manufacturer sell only to the jobbing trade?" yes, if he is crooked; no, if he is straight.



C. S. Van Wagoner.

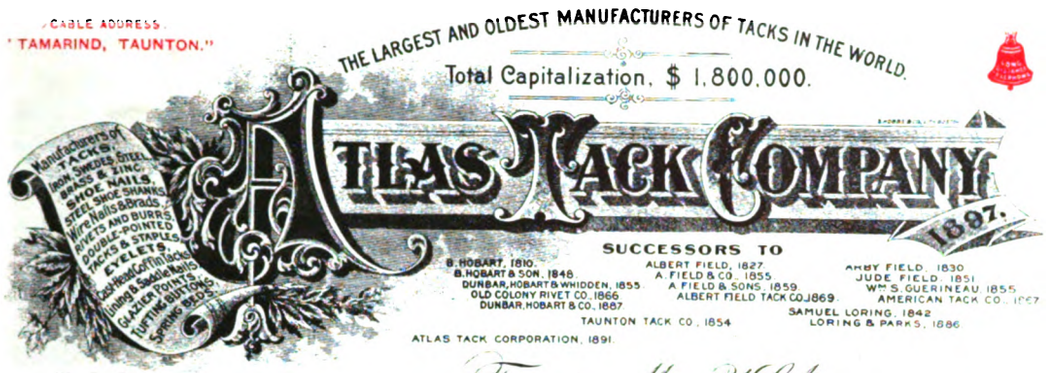
Van Wagoner & Williams Hardware Co.

Cleveland, Ohio, April, 1899.

Bissell Carpet Sweeper Co.'s Easter Announcement.

At all special seasons of the year the Bissell Carpet Sweeper Co., Grand Rapids, Mich., endeavor to interest their trade in some new features pertaining to their goods that are best adapted for that particular season, and which has the effect of stimulating the trade on Bissell sweepers very greatly. On April 1st, it is the intention to issue an Easter announcement to the trade, in which they will recommend at the opening of the spring house-cleaning season an assortment of sweepers, the like of which, in finish and mechanical construction, has never before been known. They also bring to the attention of their customers the latest mechanical features that have been introduced in their Bissell sweepers, and call to their minds the advisability of their best endeavors on high grade sweepers, on which a margin of profit ranging from 36½ to 68 per cent. can be realized. They also impress upon the minds of their customers the important value of their fixed price system which applies to all of their high grade Bissell sweepers, and which really has been one of the secrets of their success. They also say that the demand for Bissell sweepers has never been so great as it is to-day, and all past records have been

beaten. Although the value of all kinds of material needed in the construction of Bissell carpet sweepers has advanced very greatly within the past year, yet the prices and terms on the Bissell sweepers remain the same as heretofore announced. For further particulars regarding the Bissell Easter announcement, address their Grand Rapids office.



Tardy Collections Consume Profits.

The address of W. H. Preston, ex-President of the National Association of Credit Men, before the Credit Men's Association of St. Paul a short time since, contained many pertinent facts bearing upon current business practice, both wholesale and retail. Among them there was nothing presented that was more significant than the following estimate of losses due to tardy collections:

If you are doing a million dollars' business annually, and if you are carrying 30 days of your sales past due, you are in some way, either through borrowed money or because of idle capital, paying interest on $83,333.33, which, at 6 per cent., equals $416.66 per month, or $5000 per year; this is one-half of one per cent. of your entire sales. It is probably true that you are paying exchange on drafts which you make for past-due bills or for exchange on local checks, another $300 per year, for that is only $1 per day. Conservatively stated, then (and I have sought verification), the credit departments outside of losses from bad debts are averaging to reduce the dividends from the business at least one per cent., or $10,000 on a million dollars' business, or 3 to 5 per cent. of a dividend on capital usually needed for such a volume of business.

The ship's log is an instrument used for measuring the velocity of a ship. It is a flat piece of wood, some six inches in radius and in the shape of a quadrant. A piece of lead is nailed to the rim to make the log float perpendicularly. To this log a line is fastened called the log line, which is also wound around a reel in the ship's galley. The whole line (except some five fathoms next the log, called spray lines) is divided into equal lengths called knots, each of which is marked with a piece of colored tape or bunting. If the captain wants to know the rate of his ship, one of the sailors throws the log into the sea and the reel begins to unwind. The length of line run off in half a minute shows the rate of the ship's motion per hour.—*Exchange.*

L. O. GARRETT, Manager.

Taunton, Mass., U. S. A. March 20, 1899.

"Hardware,"

143 Chambers St., New York.

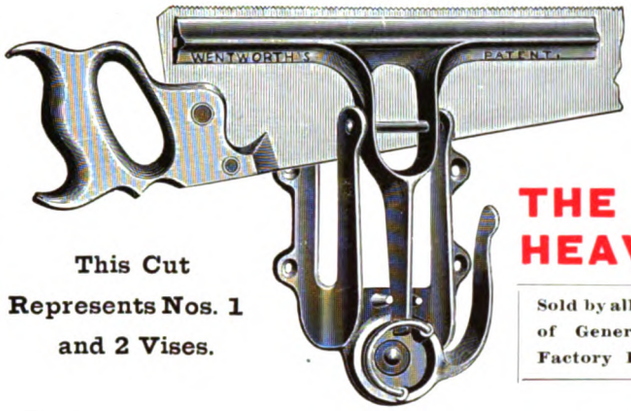
Gentlemen: It has been our intention to send you an advertisement for your special edition, but our business has been increasing with such rapid strides and bounds that we have no time to prepare the copy. We are recognized as the largest manufacturers of tacks in the world, and in times like the present, when all branches of trade are running at a high pressure, and people must have their wants supplied quickly in order to keep the wheels going, we do not have to seek for new business. We are operating one-fourth of all the tack machines that are in actual operation in America to-day. Our machines are of our own patent and are run at a 25% higher rate of speed than the average of all other tack machines of the country. We are therefore making at least 30% of all the tacks that are being produced in this country to-day.

Our facilities for the manufacture of double-pointed tacks and staples, eyelets, lining and saddle nails, cast head coffin tacks, leathered carpet tacks, papier mache nails and buttons, tufting buttons, steel shoe shanks, steel and iron rivets and burrs, hot rivets, copper belt rivets and burrs, and all kinds of specialties in wire nails are as great as our facilities for the manufacture of tacks.

We are the only concern in the country that can turn out large orders quickly. The volume of our business is such that we have been able to purchase material in large quantities and anticipate the rapid rise in the market.

We cut every variety of specialty in our various lines; we make better goods and at lower prices than our competitors; and you can readily understand that under the circumstances it is not necessary for us to advertise in order to get business.

Yours truly,



Atlas Tack Company,

By L. O. Garrett

Manager. H. G. G.

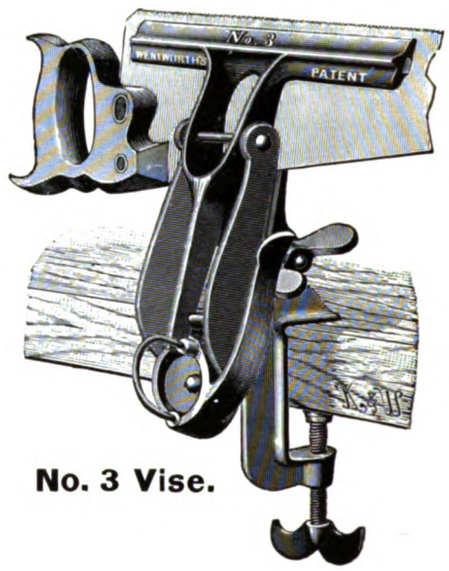
WENTWORTH'S PATENT NOISELESS SAW VISES

This Cut Represents Nos. 1 and 2 Vises.

WITH RUBBER CUSHIONED JAWS.

Prevent all vibration and render Saw Filing noiseless. Will make no more noise than Filing on a solid piece of iron.

THE LONGEST JAWS. HEAVIEST AND BEST FINISHED.



Sold by all Leading Jobbers of General Hardware at Factory Prices.

The Jaws are planed slightly concave, securing an equal bearing the entire length, and are made to open and close by simply turning the Cam Lever. They are strong, well proportioned and handsomely finished. Nos. 1 and 2 Vises can be easily screwed to a work bench or any place desired. No. 3 Vise has a malleable iron screw clamp for attaching it to a work bench, and by turning a thumb nut it can be tilted to any desired angle, and it can be easily detached and carried about from place to place.

LIST PRICES:	Per Doz.
No. 1—(11-inch Jaws)	**$13 00**
No. 2—(15-inch Jaws)	**18.00**
No. 3—(11-inch Jaws)	**18.00**

West 35th and Iron Sts., Chicago.

MR. HARDWARE MERCHANT:

If you are selling lasts and nails, better sell sorted half-soles too.

You want a middling grade—not the best—not the worst. Most dealers are selling the worst. We advise B32 B40 B42 and B50; "B" means fair quality, and the figures mean 3½ 4 4½ and 5 inches thick per dozen-pair package.

We make 8 qualities (6 to 15 thicknesses in each); but you can't sell the finest, and had better not sell the worst.

Our C grade is too poor; we think you had better sell B. Our CC grade is not fit for anybody or anything; no matter how cheap you get it.

Sell what your customers want, and keep your trade; don't sell poor stuff and lose it. This is the part of the leather trade that you can do and belongs to you. Handy besides.

If you buy in barrel lots, write us for prices; if smaller, write all the same, and we'll tell you what jobbers are near you.

BAXTER SCHENKELBERGER & CO.

THE HARDWARE JOBBERS' FUTURE.

A WORD FROM HOBART WEED.

Editor Hardware: In reply to your letter asking for an opinion on the question: "What is the present status and future prospect for the jobber as a factor in the distribution of goods?" would say, I firmly believe that good work has been done by the New York State Hardware Association in attempting to prove to the manufacturer that the best and most economical way for them to distribute their goods is through the jobber; furthermore I believe that a number of the leading manufacturers have given the matter very serious thought, and have already come to the conclusion that it is to their interest to do so. Manufacturers making a limited line of goods, it must be very expensive for them to visit the different cities and towns of this country, largely increasing the number of accounts and risks. The jobber can do it in a less costly manner as he has so many different lines to sell, but it is necessary that the jobber, who consents to represent a line for the manufacturer, be fair, and do everything in his power to distribute the goods as much as possible, thereby trying to prove to the manufacturers that it is best for them to sell through the jobber. On the other hand, the manufacturer must be loyal to the jobber. If he gives him a line of goods to sell, he must not attempt to interfere with the jobber's trade. I have heard of a number of instances where this has caused very unpleasant feeling on the part of the jobber. I am happy to say that there are a number of manufacturers who have admitted that they found it to their interest to place the jobber in position to sell as low as they would to the retail trade which is a most encouraging sign for their mutual benefit. Yours sincerely,

HOBART WEED,
Weed & Co.

Buffalo, N. Y. March, 1899.

SAMUEL A. BIGELOW'S OPINION.

Editor Hardware: You ask: "What is the present status and future prospect for the jobber?"

The revolution now in progress in all branches of trade, and the formation of trusts and combinations, leave the jobber in a more impregnable position than ever before. Never was his importance as a distributor for manufacturers more clearly defined or more freely acknowledged, than it is to day.

The necessity of close application in the production of goods at the lowest cost, keeps the manufacturer's mind well occupied and leaves him little time to attend to the distribution of his products. The skill required to be a successful manufacturer, does not develop the talents needed in a salesman. Occasionally a manufacturer thinks he knows it all and in his greed for gain, attempts the double role of both manufacturer and jobber. Many have tried it and most have returned to the jobber as their best friend, finding it more economical and more satisfactory to sell their products in large quantities than to parcel them out in a small way.

To do a successful jobbing business, to-day, one must be alert and wide-awake to adopt new methods. He must have good judgment and a quick mind to act, and he must be far-seeing. A close application to details, and a good judge of human nature, with a certain magnetism, goes to make a good salesman.

Attending to the details of manufacturing does not tend to develop these traits. The organization and force required in a modern jobbing establishment have no place in a factory. The work of making and selling are entirely unlike.

A man thoroughly trained as a manufacturer can produce best results if he leaves his mind free to attend carefully to his part, and leaves the disposition of his products to the jobbers. This is freely acknowledged and demonstrated by the action of all the important trusts and combinations. It is a fact that over 90 per cent. of the shovels sold in the United States are sold by the jobbers. The National Hardware Association has been an important factor in developing friendly feelings between manufacturers and jobbers. Never before was the importance and necessity of each to the other more marked and more clearly defined.

The future may develop consolidation of jobber as well as of manufacturers, the two may unite, and the combination thus formed will not only produce, but will market their products at a minimum cost.

The tendency of the times places no limit to the possibilities of the future.

SAMUEL A. BIGELOW,
Bigelow & Dowse Co.

Boston, Mass., March, 1899.

ANOTHER BOSTON VIEW.

Editor Hardware: In reply to your question as to "What is the present status and future prospect for the jobber as a factor in the distribution of goods?" I have now no hesitation in saying I consider him indispensable. Some eight or ten years ago my reply would have been more pessimistic, but to-day it seems to me the jobber stands in a firmer position than he has for years, and, I might say, than ever before. Some few years ago, owing to gradually reduced profits from severe competition, also from reduced consumption in proportion to increased power of production, the manufacturer said to himself "I can just as well as not save the jobber's profit, and place myself ahead of my competitor by selling direct to the retailer and consumer, the additional expense by so doing being comparatively small, as the jobber certainly does charge a large percentage for handling my goods." This has been tried in many instances, and almost invariably the manufacturer has found that it was impossible for him to distribute as economically and successfully one line of manufacture as for the jobber who is especially equipped for that purpose, and has the advantage of handling a large variety of merchandise, all of which he pushes at the same time. It is self evident that a number of lines can be handled at less cost and with greater success than one.

Then there is the credit risk; the jobber is almost invariably good pay, whilst the retailer and consumer are sometimes far from it, as many of us jobbers are frequently reminded.

I was told the other day of a certain large manufacturer of a well-known and largely advertised article of food who stated that in thirty-five years his principal office had sold $35,000,000 worth of it with a total loss during that period of less than $8000, and that practically all of this business had been done through jobbers. What would have been the result had he tried to avoid the jobber and gone direct to the retailer?

We shall watch with some curiosity to see what will be the outcome of the determination on the part of a certain large manufacturer of sporting goods to sell only to the retailer; a decision for which possibly jobbers by unfair and unreasonable competition may be partly to blame, although

Digitized by Google

it would seem that the jobber might have been compelled to maintain prices under penalty of a refusal to sell by the manufacturer if he did not.

The present status of the jobber is good and the future prospects excellent, provided he conducts his business in a legitimate and honorable manner, insists on a reasonable profit, does not believe every rumor of a cut by his competitor, deals with his business opponents as he would be dealt by, handles his manufacturer's goods to the best of his ability, and where the manufacturer provides a fair margin of profit does not foolishly give it away for a "leader" or to make some other fellows "sick."

All of us jobbers have much to learn, we are all human, none of us perfect, but let us all remember one thing, and that is, we are not in business for our health, but at least to make a living, and if possible a little more, and we cannot do it unless we secure a reasonable profit on the merchandise we sell.

WM. QUINCY WALES,
Brown & Wales.

Boston, April, 1899.

FROM JOHN H. ROBBINS.

Editor Hardware: "What is the present status and future prospect of the jobber as a factor in the distribution of goods?" During the past few years of depressed trade the manufacturers have been inclined, either directly or through agents termed "manufacturers' agents," to market their goods direct to the retail trade. Most of them have found, however, that it is not to their advantage to sell both the jobber and retailer; that the extra expense incurred in selling their goods in small quantities more than equals the extra profit obtained, and I am of the opinion that the manufacturer who watches his profit and expense sheet cannot but see that there is more profit to market his goods through the natural channel—viz., manufacturer, jobber, retail merchant and consumer—than in any other way. I cannot see why the jobbers' future prospects are not as good to-day, and in many respects better, than ever, and I am inclined to think it is the jobb r who makes the prospects, and not the prospects that make the jobber.

I am also of the opinion that a retail merchant who buys his goods of the jobber as he requires, turning his goods often, paying less store rent, taxes and insurance, taking advantage of his cash discounts, accumulates more money in the end than the party who, in buying direct, buys larger quantities than he requires, in order, as he thinks, to save an extra 2½ or 5 per cent.

I am a firm believer in the jobber protecting the retail merchant, also in the manufacturer protecting the jobber, and I cannot but feel that the manufacturers are realizing each day the importance of this fact.

JOHN H. ROBBINS,
Baldwin, Robbins & Co.

Boston, Mass.

A MAINE VIEW.

Editor Hardware: Answering yours requesting me to express my views as to "The present status and future prospect for the jobber as a factor in the distribution of goods." I can say my opinion has never changed on this subject, as the jobber is a necessity, and will always be, so long as there are small dealers. Those who argue that the days of the jobber are numbered are such as have never had any experience in the distribution of goods to the retail trade

We know there are some who have the reputation of being very sagacious business men that hold this opinion, but we think we could refute any arguments that they could bring against the continuance of the jobber as a factor, in a very few words.

The present status of the jobber is stronger than it has ever been in the past, and the future has nothing but encouragement for him. The manufacturer cannot afford to market any single line of goods to the small trade. To be sure there are manufacturers that make quite an extensive line, but even these favored ones cannot market their wares as cheaply as can the jobber, and the retailer who buys from them is more than likely to buy their straight line, accepting some goods not up to date, which the experienced jobber, with his purchases large enough to buy each article on its merits, would not think of carrying in stock, and the result would be their competitor who bought from the jobber would have the latest and best, while their goods would be store-keepers.

Another advantage is quick deliveries from the jobber, and a great deal might be said on this subject alone. After twenty-nine years' experience in the Hardware business, during which time I have for a longer or shorter period filled most every position, I think that I can see some features of this question that one with less experience would overlook.

The average retailer does not use goods in quantities that will justify him in buying from the manufacturer, and if at any time he tries to get his quantity, it is almost invariably at the expense of his profit and the equilibrium of his stock. We have seen this exemplified many times where the retailer has thought he could save money by buying from the manufacturer, who demanded that he take certain quantities in order to get his price. We have seen these goods on his shelves, or hung from the ceiling of his store, until the spiders inhabited them undisturbed.

I have known instances where the retailer has failed and gone into insolvency, from no other cause than that he was trying to buy from the manufacturer, and carrying a stock out of all proportion to his legitimate wants. Not only is it true that he overloads, but he overloads with goods that are constantly changing, and on which improvements are being made, and soon, in the parlance of the traveling man, become "chestnuts," unsalable except perhaps at a price below his original cost.

He pays interest on this money, which is lying idle on his shelves, where he could do business oftentimes on his own capital that he has invested, if he bought from the jobber, and bought as his requirements suggested.

There is nothing in the Hardware business that gives me less uneasiness than this subject of the extermination of the jobber, and judging from the experience of the last four years, the manufacturer is beginning to realize that the jobber is as essential to him as he is to the jobber.

One pleasant feature of the meeting of the National Hardware Association, in November, 1898, at Milwaukee, was the part taken by the manufacturers, who expressed themselves strongly in favor of confining themselves to the jobber as the distributor of their goods, and those who had in the past sold direct to the retailer were more than pleased with the change they had made, and the increase of business that had come to them under this policy.

A short time ago, in conversation with some other jobbers, I made the remark that the day before we had sold one of our customers a bill of goods that required twelve long billheads, and which only amounted to $378. We would ask the manufacturer, or the individual who is prophesying the extinction of the jobber, what they would do with a customer of this kind, where the invoice covered goods made by perhaps seventy-five manufacturers, some in quantities as low as 1-12 dozen. Is anyone short-sighted enough to think for a moment such a customer as this could be supplied direct from the manufacturer? Will anyone undertake to say what his freight charges would be on these goods bought separately; where he would get the time or the knowledge to look them up, and how he would find seventy-five manufacturers ready to give him credit, without long investigation?

Is it not much more reasonable for him to keep his want book, and when he gets enough to make weight sufficient for a shipment, order it from one house who combine all these lines of goods in their stock, and from whom he could get his goods with one small charge of freight, remit with

Digitized by Google

one check, and with whom he could establish a credit with out having his affairs investigated every time he sent an order?

The sharpest retailers that we know are those who buy often from reliable jobbers, and do not undertake to buy more than their requirements.

We realize there is a class of retailers who handle as large quantities as some small jobbers. These always have, and always will, buy from the manufacturer. They are located in large cities, and the quantities they buy are sufficient to guarantee their dealing direct.

The jobber never has to any extent, and probably never will, sell to this class of retailers; but when the pessimists, who are always predicting evil, are all gone, there will still be as many, or more, healthy jobbing houses as there are to-day.

The jobber is a convenience, and a necessity, and will always be.

W. Chamberlain,
Emery-Waterhouse Co.

Portland, Me., April, 1899.

A SOUTHERN VIEW.

Editor Hardware: Answering your question, "What is the present status, and future prospect, for the jobber as a factor in the distribution of goods?" Answer: We think the limits of the jobber are being narrowed every day, and we further add as a cause for this—the influence of trusts. It is easy for the jobber to reach the individual members of a firm or company who has but one place of business, and who is dependent on business by straightforward dealings, fair prices and good goods. But when a jobber now writes, he writes a letter to a trust which is answered by some man whom he never saw in many cases, and whom he never heard of, and there is no point of sympathy between the two.

Geo. E. King.
King Hardware Co.

Atlanta, Ga

FROM MR. BELL, OF TEXAS.

Editor Hardware: Replying to the question "What is the present status and the future prospect of the jobbers as a factor in the distribution of goods?" I should say in reply to the first part of this question that in my opinion they occupy preeminently the most important part in the mercantile world to-day, and I shall assign my reason in my answer to the second part of your question. A retrospect of the Hardware jobbing business of this country is a very convincing argument that they are the outcome of a demand from the purchaser as the proper channel through which to have their wants supplied quickly and cheaply, and from the manufacturer as the proper channel through which to distribute their wares. I can recall very easily the time when the necessities of our people were supplied from the large cities, or what you would term "jobbing centres." The demand, however, was, as the population increased, for a home market. This demand has been met by the establishment in every locality where the country permitted it of the "local jobber" and the lessening of the number of the large jobbers, with a contraction of their territory. So, in my opinion, this fact alone is sufficiently convincing that both the people and the manufacturers will await many years before they find a method of purchasing and marketing their goods that will reduce the expense to any greater minimum of cost, the determining feature of all "business." Yours truly,

R. E. Bell.

Weatherford, Texas.

FROM THE SOUTHWEST.

Editor Hardware: Is the Hardware jobber a necessity to the manufacturer in the distribution of his goods, or is he an expensive and useless ornament? In Arkansas there is no doubt but that he is a profitable and permanent factor in marketing the manufacturer's output. Having had but little experience in other sections, I am not in a position to judge of other territory, but here at home, the jobber is the only party who can profitably and properly distribute the manufacturer's product.

Our territory at present is freer from competition from the manufacturers than ever before. The retailers have more confidence in the jobber's ability both in his buying and selling qualifications and the consumer seems to be better satisfied in making his purchases from the retailers than at any former period. The jobber in refusing to cultivate the patronage of the consumer, wins the friendship of the retailers, and they in turn give the jobber preference as between manufacturing and jobbing competition, for they know that the jobber has ample stock from which they can draw their supplies as needed, either in small or large quantities, early or late delivery, and they can do business more on a "hand-to-mouth" policy than otherwise is possible. They are not loaded up with a large stock of goods in advance of the season, entailing an investment of considerable ready cash and a still greater amount of uneasiness. Being free of debt and worry and knowing they can get all the goods they wish from the jobber on short notice, they spend their time in judiciously catering to, and more thoroughly cultivating their legitimate retail trade. In consequence the consumer purchases his goods at a satisfactory price, the retailers make a satisfactory margin, the jobber realizes a living profit and the manufacturers receive a better and more compensating price for their goods than would have been the net results had they endeavored to distribute their goods by their own salesmen direct to the retail dealers.

Business is showing an increase over last year, even on an advancing market, and I therefore consider the jobbing business in better condition than for several years past.

Jas. J. Mandlebaum.
Fones Bros. Hardware Co.

Little Rock, Ark.

MR. LOGAN'S VIEWS.

Editor Hardware: In this day of practical affairs there is no sentiment in business, only the best methods survive, what is obsolete or useless is sloughed off. No matter how worthy the man or the class, if the methods are not the very best they must go to the wall and be succeeded by something better.

This being the case, as all careful observers will admit, what is to be the future of the Hardware jobber? Has he a place in modern business affairs, or is he a useless incumbrance on trade? Is he an unnecessary middleman adding his profit to the cost of goods before they reach the consumer or does he fill a place and render a service which saves money to the consumer? If the former he will be crowded out, if the latter he will survive.

The whole matter is one of cost of distribution. The jobber carries a stock gathered from thousands of various factories scattered over this country and Europe, and distributes to the retailer in quantities and at times as needed; for this service he gets an average profit of about 15 per cent., which is very close to the actual cost of doing the work. No great fortunes have been built up by Hardware jobbers; the net profit on the business is light. Now what will it cost the manufacturer to put his goods into the hands of the retailer? If less than 15 per cent. then the jobber is useless. Experience is the only way to determine the matter, and there are some manufacturers who are giving the direct system a trial.

Meanwhile we can make an estimate of the result. The goods must be shown to the retailer, this means travelers with attendant expense. The quantity needed by the average retailer of each maker's line is small and the cost of the traveler alone in small towns would probably be 25 per cent. on the amount of his sales. Then the manufacturer must carry thousands of accounts on his books where he now carries tens; this entails office expenses. The unavoidable losses incident to such a large number of ac-

Digitized by Google

counts would be large. The manufacturer would have to advertise his goods to create or keep up the demand, as new makers would displace him if he did not. Take all these expenses which are either altogether or partly dispensed with, by making use of the jobber and what will they amount to? We affirm that the cost of distribution under such conditions would be from 33 per cent. to 50 per cent., or even 100 per cent., according to the class of goods. If this is correct the jobber fills a valuable place in the economy of distribution and will not be displaced. He is performing this service better and at a smaller percentage than ever before. Both manufacturer and retailer get value received from the services of the jobber.

Geo. B. Logan,
Pittsburg, Pa. Logan-Gregg Hardware Co.

A RESPONSE TO THE POINT.

Editor Hardware: The present status of the Hardware jobber as a factor in the distribution of goods is fairly good, but the Southern jobber has many things to contend with, chief amongst which is the inclination among some manufacturers to sell the retailer direct without leaving a sufficient margin for the jobber to do business on. Business is fairly active, but it is found difficult to maintain the heavy advances that are taking place, and we think the manufacturers are making a mistake in making such large advances at one time. It is a hard matter to convince the average retail dealer, who is not in touch with the advances that are occurring daily, that you are acting in good faith with him when you charge him 25 per cent. more for some lines of goods and 50 per cent. for others to-day than you did a week ago, and in our opinion it would be much better to make the advances gradually so they could be educated up to it by the time the maximum was reached. The future prospects of the jobber is a subject that should command the earnest and careful consideration of every one. The manufacturer should think seriously of the fact that the jobber is spending his time and money in the distribution of his products, when if such were not the case he would be at a large expense in reaching the retailer. It therefore, follows, that if we look at this view of the case from a selfish standpoint alone the manufacturer is advancing his own interests when he protects that of the jobber.

The jobber should also consider that the manufacturers have rights that should be respected and should at all times maintain the prices established by them and not jeopardize their welfare by quoting prices on any line of goods that are below the cost of production.

If the manufacturer and jobber would act well, each his own part, the lion and the lamb would lie down together and we could join the Psalmist in saying "Behold, how good and pleasant it is for brethren to dwell together in unity!"

T. W. Gathright,
Birmingham, Ala. May & Thomas Hardware Co.

THE PASSING OF THE JOBBER! WILL HE PASS?

Editor Hardware: This is a question that, at the present time, is to some extent agitating the minds of those who are interested in its solution. Some are inclined to think that the "signs of the times" indicate that the time and condition is approaching when the services of the jobber can, and will be dispensed with. In answer, this conclusion can safely be taken for granted: That, as long as he is needed, he will remain, and when his services are no longer a necessity for the general good he will "pass." The writer has for many years been engaged in mercantile business, and has during that time noticed, more or less closely, the changes in methods for doing same. He does not see that conditions relating to the distribution of goods are very much different now from what they have been in the past. There has always been a desire on the part of both retailer and consumer to get goods from first hands, and there have always been some manufacturers who, from necessity, or from thinking they can in that way make a better profit, have gone directly to the retailer or consumer with their goods. It is said that the original Oliver Ames, when he first began to make shovels, took them on a wheelbarrow and peddled them around in his neighborhood. As his business grew his method for distributing changed; first, by marketing his goods through the retail stores in his own county and State, and, later on, using the jobbers to supply the trade of the whole country. This is a fair sample of the way business has to be handled. A large manufacturer cannot, in the most economical way, market his goods in any other way than through the jobber, and we may be sure that economy will be the factor that will determine the method. The services of the jobber will be required as long as he is the cheapest avenue through which to distribute goods. When a cheaper is found he will "pass."

C. W. Hackett,
St. Paul, Minn. C. W. Hackett Hardware Co.

DAYS OF THE JOBBER NUMBERED.

Editor Hardware: The present status of the jobber is very good, brought about by the rapid advances which, at this time, have extended throughout the entire Hardware line. But don't be deceived; it is only for the time being; it's only a taste of good things that cannot last. It is like the little boy that dams up the branch; the rising water dissolves the sand and moves on. So it is to-day in the Hardware business. Prices will rise, but the break will come, and we smaller jobbers will suffer.

As to the future prospects, I hold a view that is not very popular at this time. In my opinion, the days of the legitimate Hardware jobber are numbered. The large houses are growing larger, and dealing in everything from baby carriages to white elephants, becoming nothing more or less than department stores on a small scale. The legitimate jobber is growing less year by year. The business is becoming more concentrated, where a few years ago you would find a good number of jobbing houses in all the larger cities. To-day where are they? Take your own city, New York, then Philadelphia, Baltimore and throughout the United States; they have been forced from one cause or another to discontinue.

In the limited space given I cannot give fully the faith that's in me. But of one thing you can rest assured, the day of the small jobber is nearing the end. They must either grow bigger, and that quickly, or in a few years cease to exist. Yours truly,

W. A. Parker,
Atlanta, Ga., March, 1899. Beck & Gregg Hardware Co.

W. C. Heller & Co., Montclair, N. J., the well-known manufacturers of Heller's Steel Hardware Shelf Box, a sample of which is shown upon the inside front cover of to-day's issue, have issued a handsome catalogue showing not only these boxes and their appearance in various modern Hardware stores, but also containing illustrations of their screw cases, tool brackets, mail boxes, riding harrow, box pulls, wire stretcher, ripping plow, etc. These articles are fully illustrated and described, and in a note of introduction the manufacturers say: "We present this our catalogue, to men of business, not alone to exploit our ideas, but with a view of interesting you in the various goods of our manufacture, details of which are given in the following pages in as concise a form as possible; if inadvertently we have omitted parts and you need information, let us hear from you; we will be only too pleased to receive your inquiries, assuring you prompt service and courteous treatment. We trust this catalogue has been published to our mutual benefit."

John B. Comstock, more generally known to the trade as "The Man in the Corner," will be found hereafter at the office of the Corbin Cabinet Lock Co., at New Britain, Conn.

Kirkby Design (English Gothic). Sargent's Artistic Hardware.

Now-a-days there is an increasing demand for the artistic in Hardware and it is in response to this demand that the design shown above has been made. It is of solid bronze, and for certain classes of work is just what is wanted. This is not our only design; we have a great variety to please all tastes, to harmonize with all schools of architecture and to suit all pocket books.

In the North, in the South, in the East and in the West, buildings of all kinds have been trimmed with Sargent's Artistic Hardware. Among Home-builders especially it has a stong hold. Everywhere the story is the same—it gives satisfaction.

The Hardware dealer should sell goods that give satisfaction. If your customer is convinced of the merits of Sargent's Artistic Hardware, he will not be satisfied if you substitute something else. Give him Sargent's when he calls for Sargent's and he will be pleased and you know "the best advertisement is a pleased customer." Besides it is easier to sell goods that are called for—goods that your customer believes are the best—goods that are the best.

Sargent's Artistic Hardware is well advertised—another reason why the dealer should sell it; it's easy to sell goods that are well advertised.

If you want information as to Sargent's Artistic Hardware, your inquiry will meet with a prompt response.

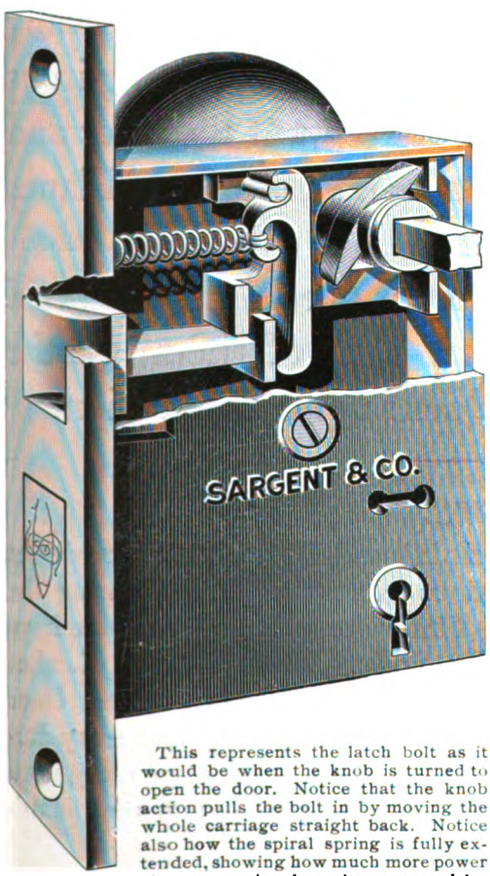
Sargent's Easy Spring Locks.

This cut illustrates in reduced size one of Sargent & Co.'s fine locks for inside doors. It has a good heavy face, with large bolts, and is substantially made in every way. The keys are our patent forged steel keys and are nickel-plated. We make also the Sargent's Cylinder Locks, with grooved flat keys, to which our Easy Spring is also applied.

The hardware is but a very small item in the whole cost of a building, even if the very best is used; the difference in cost between good locks and poor locks is so little that an owner would not consider it a saving to use poor locks if the matter was brought to his attention. After a lock is mortised into the door it is out of sight excepting the face, and that is often painted over.

Because the work is so easily concealed poor locks are often used to save a few cents, and the discomfort of poorly made goods has to be borne by the occupant of the house day after day, until the lock breaks down or some of its badly constructed parts give way, or until the owner becomes impatient with its awkward work and sends for a locksmith.

This illustration shows the interior of the lock. Notice how simple the mechanism. Imagine yourself pressing the latch bolt in with your finger—see how easily it goes in? The resistance comes only from that one spiral spring, and the leverage is so long that the latch bolt moves very easily. That same spiral spring works firm on the knob, as shown in the illustration on the following page.



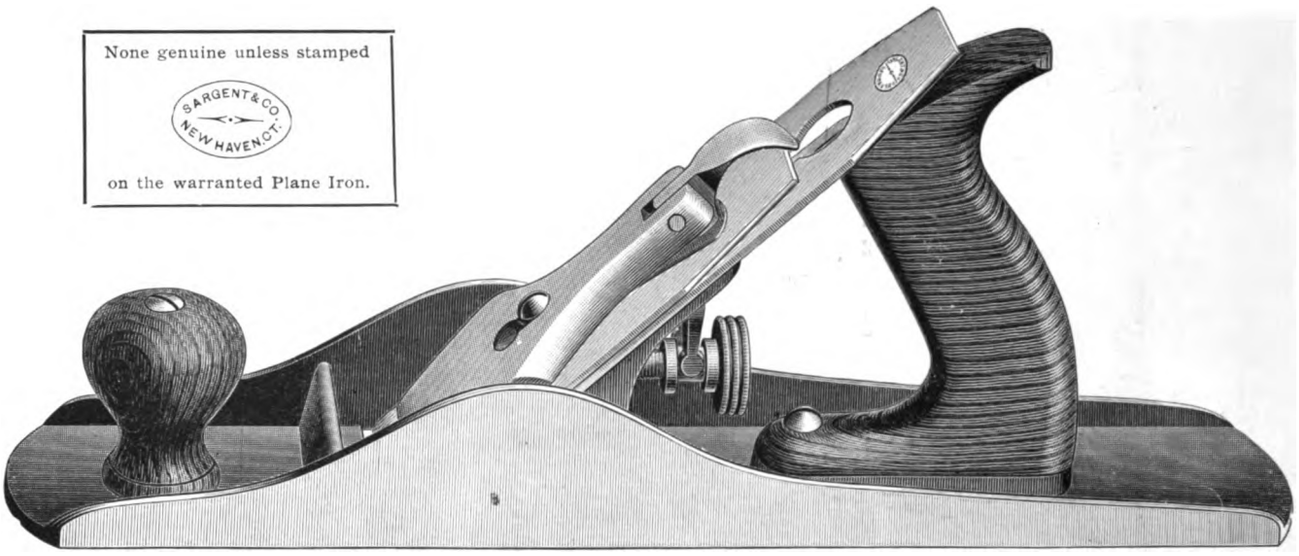
The Locksmith will probably surprise him with the information that the lock had never given any security and that it is not worth repairing. A new lock has to be put in at a greater cost than a Sargent's lock would have cost originally, and the nicely finished door is marred by the unavoidable soiling of the woodwork.

Digitized by Google

Sargent's Easy Spring Locks.

Here we have pushed the latch bolt in as it would be when the door is being shut—now you can see how it works. Notice that the latch bolt is in as far as it can go, and that the spring is extended only a little bit; this is how we get the "Easy on the Latch Bolt." It is a good feature, and, with the combination of a firm action on the knob, makes Sargent's Locks the best working locks that are manufactured.

This represents the latch bolt as it would be when the knob is turned to open the door. Notice that the knob action pulls the bolt in by moving the whole carriage straight back. Notice also how the spiral spring is fully extended, showing how much more power that one spring has when operated by the knob; this is how we get the "Firm on the Knob" with so few parts, which, together with our "Easy on the Latch Bolt," is giving so much satisfaction to the users of Sargent's Easy Spring Locks.



If Sargent's Locks are used they will not only last as long as the house stands, but they are secure against intrusion, and will always give comfort in using, because of their strong parts and proper mechanism, but especially because of the peculiar Easy Spring principle, the working of which we have tried to make plain with the accompanying illustrations.

Our Easy Spring, which is applied to all locks having the name Sargent & Co. cast on the Lock, enables the Latch Bolt to work very freely so that the door does not have to be slammed, nor stand ajar, but latches gently as it is closed. This is accomplished by using a good stiff spiral spring with a long leverage for the Latch Bolt and a direct pull for the Knob, thus producing the desirable combination of Easy on the Latch Bolt, Firm on the Knob. It has great durability; there is nothing to get out of order; it works beautifully.

Inside Locks and Front Door Locks are made with our Easy Spring principle, and it is also applied to Sargent's Cylinder Locks, which have the small grooved flat keys. All Hardware Dealers should carry Sargent's Easy Spring Locks.

Planes that Stand the Test.

Every mechanic wants to use the best Planes and every hardware dealer should sell the best. Sargent's Iron and Wood-Bottom Planes are fully warranted tools that will stand the daily test of the work-bench. They are thoroughly made, only the best material entering into their construction. They are mechanically perfect, fitted with improved adjustments and have cutting-irons that are tempered just right. They are carefully put together and handsomely finished. All these points count in favor of our Planes when the mechanic is making his selection.

You can make sales if you have the right goods in stock, and Sargent's Planes, with our strong warranty back of them, are the right planes. Booklet and prices will be sent upon application.

Screen Hardware.

The season of screens is so nearly here that it is well for the hardware dealer to make preparation for the sale of the various trimmings needed during the summer months. In our catalogue of Screen Hardware recently issued we have a complete line of Spring Hinges and Door Springs, Screen Door Catches and Latches, Screen Corners for Windows and Doors, Sash Lifts and Door Pulls, Bolts, Knobs, Hooks; in fact, a line comprising everything necessary during "fly-time" including our "No-Slam" Screen Door Check, now recognized as a summer necessity. If you have not received a copy of our Screen Hardware Catalogue we will gladly send you one upon request.

BOXING THE JOBBING COMPASS.

THE PACIFIC COAST JOBBER.

Editor Hardware: The era of business depression and shrinkage of values, which has been the lot of the Pacific Coast jobber almost without interruption since 1892, seems to be drawing to a close. It has been a period of perplexity and discouragement, of uncertain and depreciating values, of profits insufficient to adequately compensate for the investment of capital required, the risks incurred and the toil necessary to overcome the difficulties of the situation; yet, while all these embarrassments have been great and the waiting for better days wearisome, it has not been without its advantageous lessons of economy, closer application and more systematic methods, and therefore the more fully equipping the jobber to meet any emergency or condition that the future may have in store for him. The dawn of better days, of brighter prospects, of greater activity, is at hand; the limit of abnormally low prices, so prejudicial to all branches of trade, whether of manufacturer, wholesaler or retailer, appears to have been reached; the reaction has commenced, and with advancing prices based upon juster values of raw material, labor and finished product, the encouragement to renewed effort towards greater development and improved methods of distribution is more pronounced and noticeable than ever before.

MERCANTILE ASSOCIATIONS.

The formation of associations among jobbing merchants, having for its object the cultivation of more cordial and friendly relations with each other, has been the means of developing an inherent power and source of strength too long permitted to be unused. Some, indeed, considered the idea too Utopian to be of practical benefit, others as impossible of accomplishment, and still others, that, if formed, they would be of too transient a nature to be of value, if, indeed, they would not tend to still greater evils, but the necessity and benefit of giving consideration to the actions of a brother competitor instead of continuing a law unto one's self, and ordering a policy in selling goods wholly indifferent as to its effect upon others in like business, has at last forced upon the jobber the need of cultivating more friendly relations and holding frequent consultations with his rivals, and so, born of the chastening influences of business depression, and following the example set by others in different parts of the country, and as recommended by the National Hardware Association, the jobbers of this Coast have united in an association for the purpose of kindly intercourse and consultation, to consider various subjects of business policy affecting alike the common interest of all, and the result has been the establishing of such cordial relations and harmony of action between its members, as to greatly alleviate, and in numerous instances entirely overcome the difficulties and pernicious practices which formerly prevailed, seemingly so insurmountable and impossible to rectify.

Unity of purpose gives strength, and friendly discussion develops wisdom and judgment in discerning, and, where possible, remedying the most perplexing proposition.

CLASSES AND FUNCTIONS OF DISTRIBUTORS.

The appreciation of the fact that three separate and distinct orders or classes of distributors, viz.: the manufacturer, wholesaler (or jobber) and retailer, are necessary to the economical distribution of products, each restricted to his different functions in the selling of goods, is, by the current of events, becoming more generally recognized by the business community, and that when the avenue to which each should confine his efforts in gaining trade is crossed over and the pathway of the other illiberally encroached upon, conflict and opposition will ensue that will impair the reasonable profit to which each is entitled.

The manufacturer is located at a point where cheapest production consistent with favorable transportation to his market can be maintained, and he looks for large orders from comparatively few customers as yielding him the most economical results. The jobber situated usually at a prominent railroad centre places his orders with the manufacturer in advance of requirements—affording time for producing—in quantities adequate for the prompt supplying of retailers established in every city, town, village, and, perhaps, cross-road, that can be reached by traveling salesmen employed to distribute these manufactured products, educated as to their merits, and familiar with the requirements of their customers.

The retailers in turn in their respective localities supply the goods to the consumer or user, and thus the chain is complete from the manufacturer to the consumer. The various profits necessitated by goods passing through several hands work no hardship to any one; far from it; for by no other means would prices be so low to the consumer; for if the jobber was eliminated the cost to the retailer would be increased, because it would necessitate his purchasing in small quantities from a great number of manufacturers, at serious inconvenience and delay in getting goods which are required promptly, and the manufacturer's expenses in distributing a limited line of goods in such small quantities to so great a number of customers, would be so increased in employing traveling salesmen and additional clerical help, as to greatly exceed that of the jobber whose stock embraces a great variety of goods assembled from many different sources; therefore the cost to the retailer would be greater and consequently would be increased to the consumer. In the same way if the retailer was excluded the cost to the user would be greater, as it would be impracticable for the jobber to distribute direct to the consumers. They could not reach them, therefore the three divisions which have their separate and distinct characteristics are necessary to the cheapest method of supplying the community, and it cannot be served by a more satisfactory method than at present employed, i.e., from manufacturer to jobber, from jobber to retailer, and from retailer to consumer; there are exceptions, of course, and which will occur to all business men; but, as a general rule, these distinctions must be recognized and observed, or confusion, demoralization in prices and unsatisfactory results will ensue to the detriment of all, but with these separations clearly kept in view and the prerogatives belonging to, and due from each, strictly enforced, the greatest benefit to all will obtain.

IMPORTANCE OF THE TRANSPORTATION SUBJECT.

The transportation problem to the jobbers of this coast has always been a question of vital importance and not infrequently a matter of great concern owing to the serious fluctuations in rates of freight; it has been the battle-ground of many railroad tariff wars, and the wounds inflicted upon all parties in the contest although healed over by a more equitable adjustment of rates, and through a better understanding of the conditions that should regulate the subject, will ever be remembered and probably respected. The great ocean waterway will always remain open, it is a free

Digitized by Google

course that can never be closed, controlled, or subsidized, and the advantages of transportation which it affords will prove a safeguard and guarantee against excessive rates to the shippers of certain classes of freight of which the tonnage distributed from our markets is quite large, and which to a great extent will control the situation in favor of the jobber.

RELATION OF JOBBER TO THE MANUFACTURER AND RETAILER.

The jobbers of the Coast are all practically located at seaport cities which are centres for railroad, river, and ocean transportation, and are therefore most advantageously situated to command the lowest rates of freight, and for shipping to the interior. Acting as the immediate distributors of the products of distant manufacturers they are closely allied, and not independent of or antagonistic to each other, their interests are mutual and their business relations reciprocal; to derive the greatest benefit each is essential to the other. In substantially the same way the jobber and retailer are united by bonds of a common interest; the former restricted virtually to and dependent upon the trade of the latter, their welfare and prosperity is promoted by, and largely contingent upon the cordial relations that should exist between them. In his efforts to obtain trade the jobber is mainly confined to this primary and necessary avenue of business, he should recognize his obligations towards, and dependence upon this chief source of demand, always bearing in mind that without protecting the retailer by a just and legitimate profit he is not only injuring himself, but impairs the strength of the constituency whose welfare he should seek to promote; and in return the retailer recognizing the many advantages and inducements thus proffered should reciprocate by drawing his supplies as required from the jobber.

It will be seen therefore that the wholesaler cannot be ignored or superseded without detriment to the community; his position is a necessity in the economy of distribution; he is the medium upon which the manufacturer leans and upon which the retailer depends.

FUTURE OF THE PACIFIC COAST JOBBER.

The Pacific Coast wholesaler has had a varied experience during the past fifty years, he has enjoyed seasons of great activity and welcomed prosperity when business was wholly satisfactory and the prospect seemed very rosy, in consonance with its sunny skies and genial climate which is his heritage; and again he has passed through periods of depression and reverses that put to the test his capabilities and strength, but through all these vicissitudes becoming yet more firmly established on a sounder basis, and his sphere of action more widely extended, his business will expand as the country develops, and it may be that the opening up of closer relations with China, Japan, the Philippines and Hawaii, will in time present other and favorable fields for his enterprise and activity; however this may be there is no gainsaying the fact, that as long as Hardware and its kindred lines continue to be manufactured and used, just so long will there be an abiding place and a vocation for the Pacific Coast jobber. BRACE HAYDEN,

Dunham, Carrigan & Hayden Co.

San Francisco, March 15, 1899.

THE WESTERN JOBBER.

Editor Hardware: The particular thing we first notice about the above-named individual is that he is mostly handsome, all of him is smart and some of him is rich. His territory can be defined as everything west of a line, say 150 miles west of St. Louis, to a point where he and the Pacific jobber meet, which extends to the borders of Arizona at least. He claims everything in sight, and the most of t he gets. With an apology to the posterity of a dead poet, this writer will paraphrase as follows:

"No pent up Utica contracts his vision
The most of the boundless continent is his'n."

This Western jobber wishes it understood that his particular territory is 8000 miles deep, reaches to the stars, and that if he could annex New Jersey, he would even consent to attempt the conquest of this home of the trusts.

The aurora borealis of the north and the gulf stream of the south mark the confines of the pushing representatives of this Western hustler.

The Western jobber is a gentleman of expansive ideas. He is just as original in thought, just as virile and unique in its application, motive and purpose, just as forceful and comprehensive in both bulk and detail of business, just as big, broad, brawny and brave, just as brim full of the energy which brings success, as is the imperial territory in which he operates, representative of the greatness of these United States.

This may not "set" well upon the esteemed but "effete" East, but it's all right, hard headed fact just the same.

Permit the writer hereof to say for his Western training, and for the defense of "Western ideas," so called, that it is out of this region that matters of stupenduous import have been born, and their places in history, in men and measures, occupy illustrious position.

True enough this West is the home of the "crank," "fanatic," the "free silver lunatic," "fools" and other politicians, but only because some people believe that agitation is better than stagnation, and "salvation" preferable to "damnation," as applied to economical questions of theory or fact.

Your Western jobber is a modest man, especially in the distinguished and awe inspiring presence of the beatific creature, who announces himself as "the representative of Wind, Gall & Co., of New York, sir." The busy jobber, who is not readily impressed with the things he sees in this world, doubtless says "take a chair, sir," and continues his work. Most likely that work is planning a "coup" to coop or scoop his esteemed competitors up the river somewhere.

Presently the "representative" breaks in with the announcement that he is the etc., etc. of etc., etc., "the largest makers in the world, sir, of my line of goods," and he is forthwith told to "take two chairs, sir."

Your Wester jobber don't "go" much on style or magnitude. He does "go" a good deal on free passes, goes for free lunch quite often and some of him goes "broke" while sitting up with his ante.

There is nothing "small" about our friend of whom we write. He cannot pull his buttoned shirt over his head like other distinguished statesmen, but he can pull the wool over the eyes of some of his friends from Arkansas, or he can close a contract for a large gain or a heavy loss with just as much sang froid as any cold blooded villain from "back East" ever did.

He has enough mental acumen to discuss intelligently about Ibsen, Dobson or Tolstoi; but what pleases him better, is a solar plexus blow applied to the anatomy of the meretricious "cusses" whose efforts seem directed to confiscate in one sense, to effect consolidation in another.

Your Western jobber is not a unit. Strange if he should be. *Hardware* is not responsible, the Western jobber is not responsible, but your humble servant is responsible for saying this:

He believes that the majority sentiment of the Western jobber is unalterably opposed to a centralized government or a centralized economic system which perverts all the ethics of individualism and individual right, into the sole, selfish, swinish possession and disposition of a company of men, who by reason of wealth can for any time levy tribute beyond that which is justified by the natural operations of well known and fixed laws of trade.

Some of the Western jobbers can be called "anarchists" if such beliefs are "anarchy."

To-day the humiliating, actually startling spectacle is

Digitized by Google

beheld of the Standard Oil Company of Ohio pleading in its supreme court that to produce its books in obedience to a mandate of law would be to incriminate itself, and as the law which it has contemptuously violated for years is made ineffective by another law which says a thief or a robber or an adulterer cannot be coerced into incrimination by his or its own testimony, the trust offers its guilt as an extenuation for guilt, and places millions more into trusts to repeat its practices in days to come.

Some of your Western jobbers occasionally stop long enough from the grind of business to ask where and when, with all due respect to our present "dictators," is this thing to stop?

If for years the greatest violator of law has successfully defied courts—and if laws be inoperative; if the parent of a brood of children be himself a conscienceless scoundrel before the courts of a State, pray tell what may not the children do it they aspire to equally infamous memory?

If aggregated wealth can make ineffective and inoperative the least meretorious enactment designed for its government, pray tell your obtuse brethren out West what difference there is between a thief in rags and a robber in robes?

If a criminal is a man who violates the law of the land, is it improper for the descendants of the Puritans who have peopled this "rowdy West" with sterling character, to rise up in judgment and demand of the violator of the law that he first become amenable to its restrictions, before he condemns the other man who sees no difference between petty theft or enormous illegal "absorption?"

When we shall have attained to a moral status that classifies theft and robbery and crime and defiance of law as one and the same thing in act, pretense and effect by whomsoever committed, under whatever conditions fostered or perpetrated, then we may hope to attain to a state of trade civilization at least, which every sincere, earnest honest soul on earth believes in, and would like to see practiced, but which he alone sees possible in the teachings of Jesus Christ.

The Western jobber possibly has been as successful, if not the most successful, in maintaining an esprit de corps, which has added profit, happiness, honor to his business.

Out West we haven't the inertia of settled and stated territory, therefore your Western jobber honestly admires his competitor who seeks a share of an ever expanding field, and yet from which all must take their share. This leads to one thing which the manufacturers probably will verify, and that is that so far, the Western jobber is less ferocious as a price-cutter, less selfish, monopolistic.

Some of your Western jobbers are changing their political views affecting economic questions. In this they show wisdom.

Strong "protectionists" are rapidly veering toward "free trade." Political ties are badly shattered out West, but commercial interests around here are not frightened.

Some Western jobbers believe that they have a desire to see absolute free trade for such a period of time as will beyond all possibility of question demonstrate a few things.

One thing is: If a protected "infant industry" can enter the open markets of the world and sell its product in foreign lands for less than it does at home, how long should it be "protected" and how much "protection" hould it have? Another is: If the aforesaid "protected" industry, by reason of a duty on its product, can advance its price 40 per cent. to the consumer and make a big display in a 5 to 10 per cent. advance in wages to its employees; if it can purposely maintain such an outrageous condition of affairs by reason of its "protection," regardless of the economic features involved which do not and cannot justify such a condition, how long and how much ought such robbery to be legalized?

These matters are being studied, and some of the Western jobbers, if it were in their power, would eliminate every penny of protection on wire, nails, steel, etc., and let the infant industry that can sell in other lands for less than it does at home, give its friends a fair show.

When we shall have reached a place in our business rationalism that only the most unselfish and broad minded considerations can give birth to, we will have one of two things. Free trade or optional protection.

If we are to continue protection we will be driven to an adoption of a Western idea, unless this scribe is greatly in error.

Its adoption and effect will act as a safety valve and check, and the day of the rapacious trust will have gone glimmering.

When the greatest man which Kansas ever honored by her trust was the junior senator of the State, at Washington, Preston B. Plumb, originated and advocated as we recall 15 years ago, the appointment of a tariff commission, a non partisan board, whose duty it should be to recommend to the president of the United States the abrogation of any section of the tariff law which they were satisfied was inimical to the welfare of the people of the United States, because of the fact that some special section of this law was being used to build up and maintain a monopoly.

Suppose this could possibly become a law, and suppose it could honestly be given a trial, what would happen to the American Steel & Wire Co., huge as it is, in about 60 days?

Its little toes would turn up to the daisies, its little tin can would not be the only occupant of the alley, and its dictatorial assumptions would not have as much reverence as honor has among lesser monopolists who care nothing for laws, restrictive or otherwise.

For the past the Western jobber is thankful that it was no worse, in the present he certainly is tremendously interested and engaged, and the future has nothing of dread discernable.

This jobber is an optomist and iconoclast. He is a leader and discoverer. He does not fear to invade new fields of conquest in trade or altruism.

He is by instinct and training a broad, jovial, jolly hearted, but withal modest, self-possessed and earnest "fellow." He is a student in detail, philosopher in retail, and a 13-inch breech-loading force in wholesale circles.

He is a cosmopolitan in his make up and a rough rider in his stirrup.

He is loved no more nor hated the less because he is a Western jobber, but he is a distinct product whose many graces of character, many attributes of worth and accomplishments might better have been depicted by some other than myself.

The Western jobber begs through *Hardware* to extend to his esteemed friends of the East, South, Northwest, Pacific, and all other sections, an earnest assurance of his cordial good will.

H. C. Rushmore,
Gille Hardware & Iron Co.

Kansas City, Mo., March, 1899.

THE CENTRAL JOBBER.

Editor Hardware: In asking me to contribute an article to your "Special Edition" of April 10th, on the "Jobber of the Central States," I imagine you wanted to add: "Why have they grown to such a size, while East and South of us they seem to have grown less, both in size and number?" My recollections go back to the time when no jobber in Cleveland employed any regular traveling salesmen, the merchants near by coming to the market spring and fall to buy their stocks, and depending on the mail for assorting broken stocks between the seasons. I say merchants near by because a large share of the trade in this section, looked to the then large Eastern jobbers for the bulk of their Hardware. Later, Cleveland jobbers would, during the dull

Digitized by Google

season and the winter months, send out their house salesmen, but without catalogues, and with very few price-books, depending on their memory for most prices, and the customer depending on the jobbers' honesty to make prices right, where no prices were given, but gradually jobbers of the Central States began to realize that the retailers of the same section should depend on their near-by jobbers for their stock, and gradually started out regular traveling salesmen; following this with large complete and expensive catalogues, so that soon the Central State jobbers began to be the important ones and to day practically control the trade of their section.

What a great change! Take a trip through the stores and warehouses of some of the jobbing houses in this city, and where, east of Cleveland, will you find such stocks? They cannot be found, for the stocks here are not only larger, but better assorted as to the wants of the retailer in this section, than in any other city in the country. This may seem like an exaggerated statement, but one has only to make an investigation to verify the truth of same.

The causes of this transformation are many. We are located in a section where the largest quantity, as well as the largest variety of general Hardware is manufactured. The expenses of doing business are less than in the East, and the retailer by buying nearer home, procures his stock quicker, and is not compelled to carry so large a stock, which, during the declining market for many years past, previous to January last, was a very important consideration. The freight is less than from the East, and with our large catalogues in the hands of the retailers, they are enabled to sell many goods not carried in stock, ordering and receiving same within a day or two from the time the inquiry is made. Thus retailers in this section have learned they can do business with less capital by depending on their near-by jobbers for supplies, and what is, perhaps, more important, have learned they can buy any Hardware as cheap and the large tonnage of their supplies, cheaper, from the Central State Jobbers, than from those in any other city, simply because the goods are manufactured here. The Hardware manufacturers of Cleveland alone turn out thousands of dollars' worth of Hardware of various kinds daily and find a large outlet in the sale of same through Cleveland jobbers and those in our near-by cities. It is a surprise to any one, and probably to three-quarters of the citizens of Cleveland, to make a trip in almost any direction from the centre of Cleveland, and see the numerous manufacturers, employing thousands of men, and most of them manufacturing something in the line of Hardware. The capital of these Cleveland manufacturers alone runs into millions and produces thousands of articles. Our surrounding country is also lined with similar manufacturers, perhaps not so large, but adding to the variety of Hardware sold by the jobbers in this section, so that with all this material, you may say practically at our back doors, "Why should we not be in excellent shape to do business?" The Jobbers of the Central States are live, active and honorable, treating their customers in a liberal manner, and steadily increasing in size, if not in numbers, and it is the writer's prediction that they are yet in their infancy.

George T. McIntosh,
McIntosh Huntington Co.

Cleveland, Ohio, March, 1899.

THE NORTHERN JOBBER.

Editor Hardware: We are invited to write on the above subject, and would gladly comply were time afforded to do full justice to it, but the present unique condition of trade hardly permits the necessary time to prepare a readable article, and we feel certain that the same reason obtains regarding the opportunity for many to even read the trade paper, outside of its market reports.

But with our apology we must say a few words to encourage the genial manager of *Hardware* in his efforts to please the trade, and to show to the public at large the importance of this branch of commerce in the United States.

Ordinarily, the Northern territory would be defined as that section north of the now obliterated Mason and Dixon's Line, but we learn that subdivisions have been made and New England, Pennsylvania and the Lake regions are to be considered by other correspondents, consequently there is practically left only New York, commonly called the great "Empire State." The metropolis should receive first attention on account of its vast commercial importance, and while for many years it led in numbers of Hardware jobbing houses whose aggregate sales exceeded all the other cities of the State combined, yet great changes have now taken place, and the strictly jobbing houses there are not numerous.

The New York City jobbers of years gone by carried large stocks of imported Hardware and cutlery, and largely absorbed the bulk of goods made by the numerous small manufacturers of neighboring Connecticut. Their sales were scattered throughout the States and Territories "down East," "down South" and via the Isthmus and Cape Horn to the Pacific Coast. Merchants of all sections came to the city to buy usually twice a year, and "drumming" was confined to the great hotels where Mr. Merchant stopped.

The falling off in importing, and the growth of domestic manufacturing, gradually but surely changed previous conditions and the commission house representing leading manufacturers and carrying combined stocks of several such for account of the factories, grew in importance, and the jobber commenced retiring from the field.

The expense of carrying large and bulky stocks in the congested business centres of New York City, was felt and necessarily economy in distributing was studied. The building of railroads, the growth of other cities throughout the State, the spreading of manufacturers to many points outside of New England all combined to make a place for Hardware jobbers in many populous centres.

The most business in Hardware and kindred lines in New York City outside of a few large jobbers is now mainly carried on in offices where resident factory representatives attend to the immense export trade, also to the sales for direct shipment to the jobber of the North and East and while their sales may exceed the combined jobbing of former years, yet the scattering or distribution of Hardware to the small trade is probably considerably less from this point than formerly.

Outside of New York City, Hardware jobbers with good established business are located in at least eight cities—Albany, Troy, Utica, Syracuse, Rochester, Buffalo, Elmira and Binghamton.

The tendency of the times is towards localizing business and in each of the places mentioned above, the trade is largely confined to the nearby territory tributary to the respective cities. Large stocks are very generally carried, salesmen regularly visit the trade, and the nearness to customers and the now excellent facilities for shipping, insure a quick supply to the smaller dealer from the jobber's large and well filled warehouse.

There is sufficient competition to keep prices way down close to the market and the retailer is kept well posted by the trade papers, by visiting salesmen and circulars which seem to go everywhere, and undoubtedly considering the variety of goods he purchases, buys to better advantage in many respects than he could procure similar quantities from factories.

The jobbers of this State though in sharp competition with each other, have for a period of ten years maintained an organization called the New York State Association of Hardware Jobbers meeting four or five times a year and

discussing the conditions of business but without attempting to regulate prices, ending these occasions with banquets at which frequently, men prominent in the trade are guests.

At the present time particularly the jobber is no doubt apppreciated by many dealers, for his warehouse is full of goods, well bought and ready for prompt shipment at prices that no doubt compare favorably with those that may be quoted from any source. CHAS. H. TURNER.

Albany, N. Y. March 28, 1899. Albany Hardware & Iron Co.

THE EASTERN JOBBER.

Editor Hardware: An Eastern Jobber is entitled to indulge in a few moments of retrospect; as within the recollection of the writer, Boston jobbing houses did not confine themselves to New England, but were represented by one house or another in the whole United States; some making especial efforts in the South and West, others going to the Coast; one by one being driven from the field by the new jobbers springing up all over the country, having all the advantages possessed by our old houses, "many being graduates from them" and their nearness giving them the advantage of quick delivery, frequent visits, and the aggressiveness of new life.

The same has been partially true of our export business, many of the old time merchants passing away and with them their methods and business, the few left finding better facilities in their contact with manufacturers and commission houses and in shipping from New York.

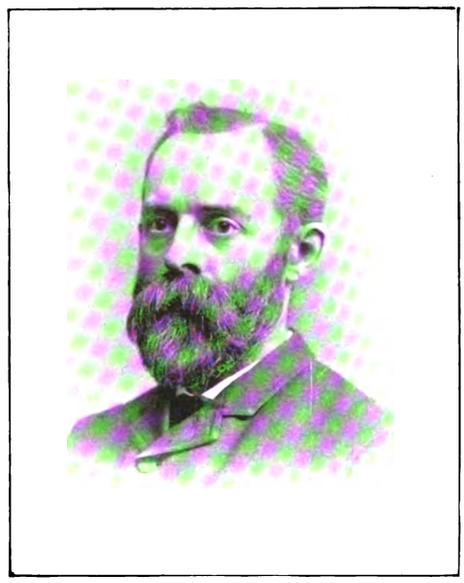
Some of our new dependencies will offer New England an opportunity to spend some energy in attempting to capture a share of the business. Up to the time of the Boston fire Boston had fourteen jobbing Hardware houses and several commission merchants, now reduced to six. Some of the present number undoubtedly do a larger volume of business than their old-time predecessors. In looking forward, we have sufficient to grapple with so that our watchword should be "Forward March."

In each issue of the Hardware journals we are greeted with new ventures by aspiring young men in the West, South, Middle States and on the Coast, but in New England but few with courage to start new. Thus our jobbers are compelled to prey on the established dealers, each vainly striving to get it all, and when some unfortunate victim ventures to embark in a new enterprise his life is made miserable until his goods are on the shelves and doors open for business.

Certain it is that prescribed as our territory is, we must recognize that each house has equal claims, and all are aggressive.

In view of these facts, which are established and positive, it would seem that we might free our minds of the delusion that however much we push, or however we carve the margins, the business will be divided. We are prone to accuse the manufacturer of encroaching on our territory, and cultivating a class of trade which they should leave to the jobber, "and in large degree and in many cases it is too true."

Unfortunately, there are numerous cases where we do not avail ourselves of the margin the manufacturers arrange for our benefit, in our anxiety to get it all; sacrificing a portion of the differential which we insist they shall grant us, in our strife to get all the business.



In view of the above facts, which I think all our friends will admit, we as New England jobbers should aim to disturb values as little as possible, realizing that the facilities within the reach of every retailer, such as catalogues and trade papers, giving information in each issue of every change in price in minute detail, certainly behooves every jobber to cultivate more confidence one in another, by more liberal methods toward each other and a spirit of recognition that a share of the business will be captured by each, whether the margin of profit is preserved or destroyed.

Competition is good, but consumption is not increased by selling goods without profit.

We jobbers are not so numerous but that all the capital and all the individuals employed in its prosecution may be satisfied with reasonable returns. This can be done, however, by considerate thought and due regard for the fact that "there are others."

The present outlook is certainly the most encouraging for many years. Of the many bright features none are so substantial as that which promises mechanical labor continued employment and higher wages.

The New England mill cities and towns are the arteries which make our business prosperous, and from them flow

LEON C. CARTER.

channels of trade in every direction, even to the most remote hill farmer, who finds a market for his products at such points. LEON C. CARTER.

Boston, Mass., March 28, 1899 Dana Hardware Co.

THE SOUTHERN JOBBER.

Editor Hardware: I desire to congratulate *Hardware* on this, its ninth birthday, and rejoice that you have made such substantial progress in the past, far beyond the experimental point as to the necessity of such a journal as *Hardware*. I also rejoice that you have undertaken to encourage Hardware Associations, realizing that they are great educational agencies, tending to the elevation of the jobbing trade, morally and socially, as well as their business methods.

The Hardware jobber of to-day is not the same individual who was found several decades in the past. Many things have co-operated to bring about the change. Nearly all the conditions surrounding him have changed, and hence of necessity he must change. While my subject is "The Southern Jobber," I shall deal with the subject in a general way, since I do not think the location on the map has anything to do with character; therefore, I think that the jobbers are very much alike, whether they come from the East or West, from the North or the South, and that when surrounded by the same conditions, there is very little difference in the actions, and that difference growing out of the individual character of the man and not arising from the section in which he is located further than he was affected by a different set of circumstances from what he would be in some other section.

I have had the pleasure of meeting the Hardware jobbers from Maine to California, and from Oregon to Florida. I observe that they apply principles to business in about the

Digitized by Google

same way and whatever difference there is, arises from the change of circumstances and not from the point of the compass. I observe that in different localities the articles that constitute the leading stocks often vary and while in the South we are applying principles to Scovil hoes, trace chains and steel plow blades, in another section they are figuring on skates, sleds, game traps, etc. The same principles apply to all. In our section of the country, the jobbers of Hardware are becoming more numerous, notwithstanding the fact that many of the correspondents for trade journals are discussing whether he is to remain a factor in trade, or be ignored altogether.

When we commenced business in Birmingham, Ala., seventeen years ago, there was not a Hardware jobber in the city. Now there are four and before your next anniversary, we expect to see still further increase. At that time, there were not more than two in the entire State of Alabama, where to-day there are not less than fifteen who claim the honor. What is true of Alabama may be said of other States in the Southern territory in a greater or less degree. The membership of the Southern Hardware Jobbers' Association is now greater than at any period of its history, with other aspirants knocking at the doors who, no doubt, will be admitted as they grow and measure up to the standard required. Am glad to see our Association requiring a high standard for its membership and the membership in our Association can be considered an evidence of acceptable credit. The jobber, as some suppose, is not a burden to the trade, neither from the standpoint of the manufacturer nor from the standpoint of the retailer, and I think observation will teach that those manufacturers who market their products through the jobbers are succeeding best and also those retailers who draw their supplies from the jobber are also succeeding best. The explanation is that it is expedient to have stocks of goods carried in every distributing center, where they can reach the consumer promptly and, in fact, it is economical in many respects. The jobber can assemble them in carload lots, thus saving heavy freight charges, and the manufacturer can obtain his orders from the jobber in an advance of the season when they will be needed; besides, he obtains the judgment of the jobber, who is on the spot and has a better idea of the necessities of his location than anyone could have at a distance, and in this way he is enabled to prepare for the wants that will arise and not overstock the market, as he might do if left to guess the situation without knowing all the circumstances and peculiarities of the location. This also enables the manufacturer to make contracts for his supplies at the most favorable conditions of the market. Another advantage is that it requires capital to have these stocks carried in various localities and the jobber is willing to furnish the capital.

These advantages could not be obtained readily should the manufacturer attempt to ignore the jobber and go direct to the consuming trade. For the manufacturer to ignore the jobber and go direct to the retailer would be like the general-in-chief of all the armies seeking to give orders to privates in person instead of dealing with the generals and they, in turn, with the colonels, majors and captains and so on down the line, until all the privates are reached. By having an army properly organized, the orders reach the privates simultaneously in all parts of the army. The distribution of goods from the manufacturer to the consumer is a great study and a difficult one and it is difficult to leave out some responsible party in each locality and accomplish the work to the best advantage. I admit that this problem has not been demonstrated to the satisfaction of all the manufacturers, or even all the jobbers and is not susceptible of mathematical demonstration, but I think that the existence of the jobber himself during the long time which he has been such a potent factor is the clearest demonstration that we can give. We have never seen, and I dare say, will never see so large a class of individuals come into being without being the logical result of a condition necessary to fill a want. However, I do not think it necessary to make an argument on this point to maintain the existence of the jobber, for when there is no longer a place for him in the field, he will readily find a comfortable place to rest. Suppose the retailer should deem it to his interest to knock out the middle man—then might he not find a strong healthy competitor in his midst who might resort to some other method similar to department stores and flood all of his customers with catalogues, sending out prices which would prove very troublesome and, in turn, the retailer instead of depending upon the jobber for his supplies, would be forced to replenish broken stocks from distant factories and often in very small quantities, adding a very heavy expense in cutting down his profits and often the demand would be beyond his control before he could furnish the supplies.

One distinction that the Southern jobber enjoys, different from an Eastern or Middle States jobber and that is he is farther from the base of his supplies and he does not have his principals—the manufacturers—for competitors. I am told that many manufacturers will work the choice consuming trade near their doors when they would not attempt the same thing in the more distant markets. There may be good reasons for this and as it is a fact, I suppose there are. Perhaps the jobber with the factory at his door feels that the factory ought to carry the stock and in turn the factory feels that if it does carry the stock, then why not supply the choice consumers at least and leave the smaller buyers and persons of limited credit to the dealer or jobber to look after? I do not say that I have fallen upon the correct explanation. I am told that this condition of things does exist. The Southern jobber works in a field which has not yet become distinguished as a manufacturing centre of Hardware and which is farther removed from the base of his supplies and hence the necessity of carrying larger stocks than if the same might be obtained from the factory after the sale was made, which he could do if located near him. For example, New York City has not so many large jobbing houses as some other cities in the West of smaller population, New York City being headquarters of most of the important factories, hence parties dealing in that market are inclined to deal directly with them, which we think is the explanation. The Southern jobber is, therefore, blessed, he being more remote from the manufacturers of Hardware.

However, it is a splendid thing to have factories manufacturing goods in other lines to locate in his midst, since they bring an increase in population, and an increase in population means an increased demand for various lines of Hardware. We are, therefore, glad to see more cotton factories come our way. The city of Birmingham is somewhat an exception to this general rule in the South, as it is becoming to be quite a center in some lines of Hardware, especially heavy Hardware. My remarks are intended to apply to the Southern field in general. I am pleased to believe that the jobber of to-day is a more intelligent man than he was ten years ago, even though he be the same individual. Many things have worked together to this end. Some of the potent reasons are that they have sought the benefit of each other's experience through the Association meetings and free exchange of views and ideas. During this period, they have passed the ordeal of a market continually declining and often when the goods were bought, they were worth less when they reached his store than when the order was placed, which forced them to be more careful with credits and increased the risk of conducting business and resulted in a period of very small margin of profit, which it will be hard to get away from, but these adversities have taught him wisdom and should make him more secure now that the

"THE ACCURATE" WINDOW-GLASS CUTTER

PATENTED FEB. 8, 1898.

This device is the first improvement ever placed within the reach of ordinary glaziers and others who make use of window glass. It is

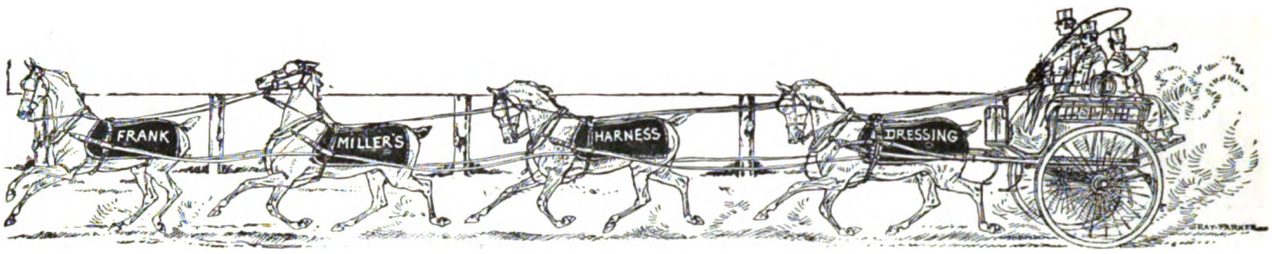
FIRST.—More accurate than cutting with hand cutter and straight edge, as it insures an absolute rectangular cut.

SECOND.—It dispenses with the measurements on each end of your light, as you set your cutter right on the measurement you want.

THIRD.—Diminishes the risk of breaking, as you do not have to press a straight edge down hard on your glass to keep it from slipping.

FOURTH.—You don't have to wait for the only man in the shop who can cut glass. Anybody can use this tool without previous practice.

FIFTH.—It is a time-saver. If you have many lights of the same size to cut, you have to set it on the mark but once.



SIXTH.—It is portable. It can be carried to a job and set up very readily, as all that is necessary to set it up is a level place and three small screws.

SEVENTH.—In connection with the straight cut is an attachment using the same cutter whereby CIRCULAR CUTS OF ANY DIAMETER MAY BE MADE. This is absolutely the only successful mechanical appliance on the market for such a purpose.

EIGHTH.- Simplicity. Nothing to get out of order. This Cutter, including circular attachment, retails at $3.(N), with a liberal discount to the trade.

tide has changed and almost all articles are worth more on arrival at the store than when they were bought. Seeming adversities often prove blessings in disguise and develop thought and strength. We are passing now through a remarkable period and it will appear the more remarkable when it is passed and we can look back upon it. The severe depressions have caused our manufacturers to seek markets outside of our own country and in this way they have taken many of the surplus products out of the market, which has resulted in the revival of trade and the severe test which the manufacturers have been put to by the extreme low prices has made them willing to unite their efforts in order to better their conditions, thus resulting in the union of many factories and the heavy capitalization of many of the chief products which has been unheard of in the past. Of course, we look with more or less trepidation upon those monopolies for fear that there is evil ahead. Prices should not be forced up unnaturally, but it is a great temptation when a set of men have arbitrary control of an article to force the price up too rapidly and produce a state in the public mind of opposition. This also tends to encourage other people who have means to go into the manufacture of articles, for it appears to offer large dividends and handsome profits and we think we can expect in a few years to see an over-production, making the last state of affairs worse than the first. The monopolies will either have to buy them out at high prices to keep down competition, or they will continue to build new factories until the want is supplied and there becomes a surplus on the market again.

Just at this time, however, since we are acquiring new territories, the chances are that we will open up a wider field of foreign operation and we will have a larger demand than we ever had before. We hope this will be the case and that we will not have a reaction, which is sure to come unless we find larger outlets for the products. A few individuals, no doubt, will make large fortunes in the meantime, but the closing down of factories and dismissing large scores of salesmen is not a desirable feature of these combinations. In order that the manufacturer and the merchant should be prosperous, it is highly important that we have sound currency. If we can continue to sell our products abroad and in return for the same have an influx of good money, it will naturally result in our factories running full time and our laborers being paid full wages, increasing our consumption at home and helping, in a very large measure, to solve the financial question. We trust our law-makers will reform the currency in a wise manner and in a way that shall become an example to the balanee of the world and demonstrate to them that now and forever we will have a currency that is sound and good in any part of the world. In consequence, we may look for idle capital from all parts of the globe to come to us and help build up our industries, and make our country the grandest country on the globe. London has been the financial center of the world for many years, but with our increase of population and vast resources, there is some prospect of our great metropolis becoming the financial center of the world and being able to price our articles at home without having to cross the seas to ascertain their value, as is now the case. Let us hope, therefore, that our people are open to all emergencies and will have the wisdom to do the best things at the right time and that we are on the eve of a prosperity with which there is nothing in the past to make comparison. J. D. Moore,

Birmingham, Ala., March 31, 1899. Moore & Handley Hdw. Co.

"James, my son, did you take that letter to the post office and pay the postage on it?"

"Father, I see'd a lot of men putting letters in a little place, and when no one was looking I slipped in yours for nothing."—*Boston Traveler.*

Bigelow & Dowse Co.

The firm now known as Bigelow & Dowse Co., No. 229 Franklin Street, Boston, Mass., was originally established in 1839, under the name of Horton & Cordis. In 1845 F. A. Hall was admitted a partner, the firm name being changed to Horton, Cordis & Co., and continued so until 1851, when John F. Macomber became a partner, the style of the firm being then changed to Horton, Hall & Co. This name held until 1864.

In October, 1855, Mr. Bigelow, the head of the present firm, entered the Hardware business, as a clerk, with Eaton & Palmer, and followed their destinies until they became Eaton, Lovett & Wellington. In 1864 he joined the firm of Homer, Bishop & Co., who purchased the stock and good will of Horton, Hall & Co. Mr. Dowse, of the present firm, commenced with Horton, Hall & Co., as a clerk, in April, 1860.

In the Boston fire of 1872, which destroyed every wholesale Hardware stock in the city, Homer, Bishop & Co.'s building was the last to go. S. J. M. Homer contracted a severe cold in his exertions to save property, and this, turning into pneumonia, ended in his death and caused the dissolution of the firm.

In 1873 Mr. Bigelow and Mr. Dowse induced John F. Macomber to return to active business, and the firm of Macomber, Bigelow & Dowse was formed. In 1881, Mr. Macomber becoming an invalid, retired, leaving Mr. Bigelow and Mr. Dowse, who formed a co-partnership as Bigelow & Dowse.

In 1894 the business was transferred to a stock company, under the style of Bigelow & Dowse Co., with Samuel A. Bigelow as president and Chas. F. Dowse as treasurer and secretary. The present company employs a force of over 110.

The following is a partial list of lines carried, with the territory covered:

Sole agents for United States: Keene Mfg. Co., ice skates; Boston Screw Co., wood screws; Riverside Tool Co., hand saws, cross-cut saws, ice saws, compass saws; Franklin and Helmet roofing papers; Excelsior, Dirigo, Ulster and Walrus sheathing paper; Neponset, Reading, Croton, Walrus and B. & D. garden hose; Park Flyer, Copley, Shawmut and B. & D. Special bicycles; Riverside chisels, braces, files, augers, auger bits, gimlets, screw-drivers, screw-driver bits, picks, mattocks, drawing knives, sand paper, emery paper, emery cloth, nail hammers, hatchets, blued-steel squares, toy squares, T-bevels, nail sets, saw sets, saw rods, grass hooks and shears, pruning shears; Bigelow, Franklin, Harvard and Eastern shovels and spades; Riverside hammocks, trowels, revolving punches, drive punches; Blue-Jacket, Franklin, Shawmut, Aroostook and Bradley axes.

Sole agents for New England: Davis Sewing Machine Co., Dayton bicycles; New York Knife Co., pocket and table cutlery; Brown, Hinman & Huntington Co., steel goods; Medford Mfg. Co., dog collars; Yale & Towne Mfg. Co., door locks, cabinet locks, bronze Hardware padlocks and Weston differential pulley blocks; Standard Tool Co., twist drills; I. H. Force, hickory axe, pick and sledge handles; Supplee Hardware Co., Continental, Franklin and Star Clipper lawn mowers; Utica Roofing Co., Sheathing, and Medal Brand roofing papers; N. Y. Wire Cloth Co., wire netting; Porter Screen Mfg. Co., window and door screens; Arnold, Schwinn & Co., bicycles; A. D. Meiselbach, bicycles; Fay Mfg. Co., bicycles.

"Uncle Alex, why do people saw wood and say nothing?"

"Because the words a man wants to say when he is sawing wood would get him turned out of church."—*Exchange.*

The quality of Cuban coffee is excellent, and its culture was flourishing before the war.—*Exchange.*

SOME REPRESENTATIVE HOUSES.

Sickels, Preston & Nutting Co., Davenport, Iowa: Was organized about 1850 and assumed the name of Sickels & Preston about 1860, Robert Sickels, the present president, and A. J. Preston, the present vice-president, comprising the firm of Sickels & Preston, at that time carrying a line of general Hardware, nails, cutlery, tinners' tools, tinners' stock, metals, farming tools, metal roofing, metal brushes, etc., etc. The present officers are: President, Robert Sickels; vice-president, A. J. Preston; treasurer and manager, J. R. Nutting; secretary, Grant H. Nutting. Board of Directors: J. R. Nutting, A. J. Preston and Grant H. Nutting. Territory covered: Iowa, Western Illinois and portions of other adjoining States.

Biddle Hardware Co., Philadelphia, Pa.: The Biddle Hardware Co. was started in 1837, under the name of R & W. C. Biddle, by the brothers Robert and Wm. C Biddle. The firm title changed in about 1867 to the Biddle Hardware Co., and the firm now consists of Charles M. Biddle, Edward Knight and James H. Ritter. As for territory, they travel from New Jersey to Nebraska inclusive, and South as far as the Carolinas.

W. Bingham Co., Cleveland, Ohio: Established, 1841; incorporated, 1888. Capital stock, $400,000. Officers: Hon. William Bingham, president; John E. Greene, vice-president; Charles W. Bingham, treasurer; Henry S. Blossom, secretary. Territory extends from Schnenectady on the East to the Florida line on the South, and on the West to the Mississippi River, including seventeen States. Lines handled are shelf and heavy Hardware, metals; railroad, mill and mine supplies, cutlery and sporting goods, and tools for all crafts.

Lockwood-Taylor Hardware Co., Cleveland, Ohio: Was organized under a partnership in 1866, and was incorporated in 1889, and the following officers elected: President, C. B. Lockwood; vice-president, J. Q Riddle; treasurer, M. Taylor; secretary, B. L. Pennington. These parties have continued to be, and are, the present officers of the company. The territory covered is Ohio, western New York and Pennsylvania, parts of West Virginia, Indiana, Illinois and Michigan.

Gray & Dudley Hardware Co., Nashville, Tenn.: Was formed June 1, 1895, by the consolidation of Dudley Bros. and Black & Gray, Fall & Co. The two old firms were among the largest and most influential business houses of Nashville, and were among the leading houses of the South. The officers of this company are: President, R. M. Dudley; vice-president, John M. Gray, Jr.; treasurer, Jas. T. Jenkins; secretary, R. Houston Dudley, Jr. The company occupies the buildings, Nos. 215 to 226 North Market Street, with warehouse, No. 436 Chestnut Street The goods handled consist of railway and mill supplies heavy Hardware, builders' Hardware, plows, farming implements, mechanics' tools, saddlery, cutlery, guns, ammunition, fishing tackle, sporting goods and house-furnishings. The stock carried averages about $300,000. Twenty traveling salesmen are employed, covering the States of Tennessee, Kentucky and Alabama, and portions of Georgia and Florida. The company is gradually expanding along conservative lines, and is now enjoying the largest and most successful year in its history.

Logan-Gregg Hardware Co., Pittsburg, Pa.: The origin of the Logan-Gregg Hardware Co. dates back to 1831, when John T. Logan and Robert T. Kennedy, young men from Lancaster, Pa., ventured into the then little town of Pittsburg, at the head of navigation on the Ohio River, and opened a Hardware store. The beginning was small, the partners doing most of the work themselves, but has had a steady growth during the sixty-eight years of its history. The firm name has been Logan & Kennedy; Logan, Wilson & Co.; Logan & Gregg; Logan, Gregg & Co., and Logan-Gregg Hardware Co. John T. Logan remained in the firm until his death in 1871, and his son, George B. Logan, and grandson, P. L. Logan, are now the president and vice-president of the company. Edward Gregg came to the house in 1836 as a boy, and was active in the concern until his death in 1890. His nephew, Thos. A. Parke, trained from boyhood in the house, succeeded to the active management until his death in 1895, and his son, W. Howard Parke, is now the secretary of the company. The territory covered includes Pennsylvania, Ohio, West Virginia, Western Maryland and parts of Virginia and Kentucky. The line carried covers cutlery, guns and fishing tackle, house-furnishings, paints and oils, builders' Hardware, mill supplies, mechanics' and farm tools, bicycles and sundries, buggies, harness and horse goods, heavy Hardware, and supplies for coal and coke works. The building occupied covers a floor space of some 60,000 square feet, with warehouse facilities additional as required for surplus stock. In addition to the officers named above, Robert M. Repp is general manager; Jacob Lang, manager of travelers, and John M. Pardee, superintendent of house sales. All these men have been connected with the house from boyhood, it being one of the cardinal principles of this house to advance its men to the higher positions as they are fit for them and vacancies occur.

Barker-Jennings Hardware Co., Lynchburg, Va., dates back to August, 1887, at which time the firm of Bell, Barker & Jennings was organized, and succeeded to the business of Jones, Watts Bros. & Co., who retired after having conducted a very successful business for twenty years or more. In January, 1895, the firm was incorporated under the style of the Bell, Barker & Jennings Hardware Co., and continued until January, 1897, when E. L. Bell retired, and the style was changed to the Barker Jennings Hardware Co. The present active members, O. B. Barker and J. T. Jennings, grew up with the old firm of Jones, Watts Bros. & Co., whom they succeeded. The concern does a strictly wholesale business in Hardware, cutlery, engineers' and miners' supplies, agricultural implements, paints, oils, brushes, woodenware, glass, etc. They occupy one of the largest and most modern warerooms in the South, 83 x 132 feet, five stories. They employ six traveling men, covering Virginia and parts of North Carolina, Tennessee and West Virginia. The paid in capital and surplus is $102,000. The present officers are O. B. Barker, president; J. T. Jennings, vice-president, and R. S. Jones, secretary-treasurer.

James C. Lindsay Hardware Co., Pittsburg, Pa.: Was established in 1867 by James C. Lindsay, Geo. B. Sterrit and A H. Euwer, under the firm name of Lindsay, Sterrit & Euwer, and so continued until 1879, when Mr. Euwer retired, and the firm became Lindsay, Sterrit & Co. Later on, Mr. Sterrit retiring, the style of the firm was changed to James C. Lindsay & Co., and so continued until 1895, when a stock company was organized under the present

Digitized by Google

title of the James C. Lindsay Hardware Co., Jas. C. Lindsay becoming its president. His death occurred shortly afterward, and the management of the business has since been in the hands of the officers of the company, as follows: President, Thos. McMurray; vice-president, J. S. Lindsay; treasurer, A. J. Bihler; secretary, J. O. Fitzsimmons. The territory covered is Pennsylvania, Ohio, West Virginia, Maryland, Virginia and portions of Kentucky. They carry a complete line of shelf and heavy Hardware, cutlery, firearms, ammunition and mine supplies, and the business is exclusively wholesale, no goods whatever being retailed by this company. There are a number of lines of which they make a specialty, but more especially on True Blue Edge Tools. Under this line they market their lines of hatchets, axes, broad axes, razors and other edge tools. It is needless to enumerate the many different lines which they control in that market and need only only add that their stock is complete in every department.

J. H. Fall & Co., Nashville, Tenn.: Was organized over ten years ago, and the senior member, while still a young man, is the oldest Hardwareman actually engaged in the Hardware business in that city. They have the largest business in the city, and enjoy the confidence of the trade throughout that section. They cover Kentucky, Tennessee, Georgia, Alabama and Mississippi. The present officers are: J. H. Fall, president; J. H. Fall, Jr., vice-president; C. W. Haden, secretary and treasurer.

Baldwin, Robbins & Co, Boston, Mass.: Jobbers' and manufacturers' agents. Handle general Hardware, agricultural tools, woodenware, cutlery, bicycle sundries and saddlery Hardware. Cover New England, Northern New York, and also export. Sole New England agents for Withington & Cooley Mfg. Co.'s farming tools, Imperial and Hub lawn mowers, Hub and Forest Foe axes, Hub brand files, Reed and Prince wood screws, tire and stove bolts, etc., flexible felt weather strip, Queen Anne Screen Co.'s window screens and doors, Washburn & Moen Mfg. Co.'s steel wire nails and barbed wire. Business strictly wholesale. Established in 1846 by Flint & Carter; succeeded by Samuel Carter Co.; Carter, Stratton & Co.; Stratton, Orton & Corey; Stratton, Corey & Co.; Corey, Brooks & Co; Henry Brooks & Co; Brooks, Baldwin & Robbins, and Baldwin, Robbins & Co. The partners at present are Thos. H. Baldwin, John H. Robbins, Austin H. Decatur and William A. Hopkins. Mr. Baldwin, the senior partner of the present firm, entered the employ of the house in 1867, when its style was Stratton, Orton & Corey, and was gradually advanced until, in 1883, he, with H. K. Adams, was admitted into partnership, the new firm being known as Henry Brooks & Co. Mr. Robbins began his business career with Hogan, Clark & Sleeper in 1869, going with B. Callender & Co., in 1871, as traveling salesman, where he remained for sixteen years, leaving that firm in 1887 to accept a partnership with Brooks & Baldwin, forming the new firm of Brooks, Baldwin & Robbins. Mr. Decatur was formerly with B. Callender & Co. as traveling salesman, entering the employ of Brooks, Baldwin & Robbins in 1887 in a similar capacity. Mr. Hopkins entered the Hardware business in 1875, commencing with Macomber, Bigelow & Dowse, where he remained nineteen years. In 1894, Mr. Brooks, retiring from the firm of Brooks, Baldwin & Robbins, Messrs. Decatur & Hopkins were admitted, forming the present firm of Baldwin, Robbins & Co.

Freeman, Delamater & Co., Detroit, Mich.: Wholesale Hardware; organized in 1890; capital stock, $250,000; paid in, $202,750. John Freeman, president; T. J. Chamberlain, vice-president; E. C. Delamater, secretary and treasurer. Cover Michigan, Ohio and Indiana. Employ ten travelers, and carry a complete stock of general shelf and heavy Hardware, cutlery and plated ware. State agents for the sale of the Otsego steel goods, Gurney refrigerators, Simond's cross cut saws, Blair Mfg. Co. lawn mowers, and many other valuable specialties.

W. W. Woodruff & Co., Knoxville, Tennesse: Has been in business since the war. Both of the original members, W. W. Woodruff and W. E. Gibbons, were in the Union Army under Burnsides, and were nearly starved when Longstreet beseiged Knoxville, in November, 1863. They both then and there resolved to get even by going back to Knoxville after the war, and growing up with the country. The firm started a small room 9 by 35 feet and moved three times the first year and each time into larger quarters. In 1874 they built a large, commodious three-story double front store 50 by 150. On April 8th, 1897 this was burned to the ground, and in six months they were back in a magnificient six story double front located in the business centre and the firm became a stock company at that time. They have six men on the road and travel Tennessee, Kentucky, Virginia, North Carolina and Georgia. Principal lines are Hardware, agricultural implements, seeds, stoves etc., paints, and glass, sporting goods, carriages and buggies.

S. B. Hubbard Co., Jacksonville, Fla: Was established by S. B. Hubbard in 1868; incorporated in 1892, and have at present a capital stock of $100,000. About three-fourths of their business is wholesale. They carry a very large stock of doors sash and blinds, and also do a plumbing jobbing business, as well as manufacture tinware on a small scale. The officers are: President, S. B. Hubbard; vice-president and treasurer, Frank S. Gray; secretary, S. B. Hubbard, Jr.: manager mechanical department, John Einig.

C. M. McClung & Co., Knoxville, Tenn.: Was founded in July, 1880, as McClung, Powell & Co., the McClung in that firm being Dr. Matthew G. McClung, since deceased. In July, 1882, C M. McClung bought Dr. McClung's interest in the firm, and January 1, 1884, the name was changed to C. M. McClung & Co.; which has since remained the style of the firm, its present members being C. M. McClung, Bruce Keener and C. J. McClung, Jr. The firm carries heavy and shelf Hardware, metals, tin plate, wagon and carriage woodenware, coal miners' supplies, Hazard powder, sporting goods, buggies and light vehicles. They manufacture tinware and cooking and heating stoves. Their business extends over East Tennessee, Southeastern Kentucky, Southwestern Virginia, Northern Georgia and Alabama and Western North Carolina. Their offices and warehouses are located immediately on the railroad tracks, where their shipping facilities are of the best.

Rector & Wilhelmy Co., Omaha, Neb.: Was organized in 1871, at which time the firm was located in Nebraska City, and were running a retail business, under the head of Larson & Wilhelm. In 1877, Mr. Larson retired and his place was taken by W. S. Rector, since which time there has been no change in the title of the firm. The business was incorporated in 1884, and at that time there were associated with it, P. C. DeVol and W. S. Wright, and the officers elected at that time, with one exception, have held office continuously ever since. Present officers are as follows: P. C. DeVol, president; F. B. Hochstetler, vice-president; J. F. Wilhelmy, secretary; W. S. Wright, treasurer and manager. The president has held his office for fifteen years contiuously, and his salary has been doubled every year. There has been practically no change in the management of the officers of the company during that time, with the exception that, two years ago, when, in addition to his other duties, Mr. Wright was made treasurer, and thus placed in active control of the financial, as well as the other departments of the business, which had, previous to that time, been in his charge.

Wyeth Hardware & Mfg. Co., St. Joseph, Mo.: Was started in 1860 by W. M. Wyeth, and the present company

Digitized by Google

was incorporated March 20th, 1891. They cover all the territory west of the Mississippi river in the United States, and do a wholesale business in Hardware, sporting goods, cutlery and bicycles; also manufacture and job saddles, collars and harness, and saddlery Hardware. The officers are: W. M. Wyeth, president; Huston Wyeth, vice-president; G. F. Steinacker, treasurer; G. M. Johnson, secretary.

From a small retail beginning in 1859, the house of Farwell, Ozmun, Kirk & Co., St. Paul, Minn., has advanced to its present prominent position among jobbers of Hardware, having become one of the large and strongly established houses in the trade. The building occupied by this company was constructed expressly for it in 1895. It is 210 feet long by 100 feet deep and six stories high, with a cemented cellar under the entire building. The boilers, engines and electric light plant are located in the cellar, which is also used for storing a shipping stock of nails, barb wire and sheet iron; the bulk of such goods, however, being handled from the company's warehouse, a separate building containing 30,000 square feet of floor space. The first floor of the main building is devoted to offices, sample rooms, shipping and receiving departments. The five floors above are devoted to their very large and well assorted stock of general Hardware, nearly 200,000 square feet of floor space being required for this purpose. Four large elevators and one small one are required. The packing is done on the second floor, and boxed goods are quickly transferred to the shipping room directly below by means of slides, which are a great saving of time and labor. The house is most favorably situated for both receiving and shipping—having its own railroad track running the entire length of the building and on a level with the basement. Most of the freight depots are not farther than two blocks away, thereby enabling them to ship nearly to the close of shipping hours. The lines carried are as follows; general Hardware, tin plate and metals, locks and builders' Hardware, house furnishing goods, tinners' tools and supplies, bicycles and bicycle sundries, cutlery and silver plated ware, guns, sporting goods and fishing tackle, butcher tools and supplies. Department catalogues are published annually, and from time to time it is found necessary to issue a large general catalogue embracing their entire line. Their corps of salesmen numbering about forty travelers cover a territory reaching to the Pacific Coast, south to Missouri and Oklahoma, east to Illinois and north to and including some parts of Canada. Farwell, Ozmun, Kirk & Co. were incorporated in 1887. The board of directors are: R. A. Kirk, C. H. Bigelow, F. W. Hurty, C. H. Bigelow, Jr. and F. B. Platt. The officers are: R. A. Kirk, president and treasurer; C. H. Bigelow, vice-president; F. W. Hurty, secretary; and E. B. Kirk, assistant treasurer.

Butts & Ordway Co., Boston, Mass.: The firm of Butts & Ordway was founded in 1888, by Frederick H. Butts and Henry C. Ordway, with premises at No. 500 Atlantic Avenue, Boston, Mass. Mr. Butts was formerly with Bradley, Hastings & Co. for eight years; and Mr. Ordway had had no previous experience in this line. The firm continued as such until 1898; when it was incorporated as a stock company, as above named; and moved into new premises, built especially for them, at No. 190 High Street, Boston. In September of that year, Mr. Ordway withdrew his interest from the company; and Mr. Butts, as president and treasurer, took sole management. They manufacture blacksmith's machines, in which they do a large trade, both foreign and domestic. They have manufactured for them a complete line of bicycles; including thirteen different models, and six grades; sold under the names of Butts' (chainless) Standish, Alden, Atlantic, Speedwell and Leader. These wheels are sold throughout the United States; and pushed especially in New England. Besides the above mentioned lines, the company does a general jobbing business in iron and steel, and heavy and carriage Hardware; and are represented by a force of six travelling men.

Van Camp Hardware & Iron Co., Indianapolis, Ind.: Anderson, Bullock & Schofield was succeeded by Cortland Van Camp in 1876, who during the same year consolidated with the iron house of Hanson & Bergundthal, under the firm name of Hanson, Van Camp & Co. They were succeeded in 1886 by the present corporation. The present officers are Cortland Van Camp, president; A. B. Caldwell, secretary and treasurer; R. P. Van Camp, assistant treasurer; S. G. Van Camp, assistant secretary. The territory covered by their twenty-five traveling representatives, is Western Ohio, Southern Michigan, and the States of Indiana and Illinois.

The concern of Dunham, Carrigan & Hayden Co, San Francisco, Cal., was originally founded in San Francisco in the year 1849, under the name of Conroy & O'Connor, under which name it continued until 1875, when five of the clerks then employed bought out the original owners and continued the business under the name of Dunham, Carrigan & Co. The five parties in question were: B. F. Dunham, Andrew Carrigan, Brace Hayden, E. W. Playter, W. L. McCormick. The business was incorporated in the year 1888, and Mr. Playter having withdrawn, and Mr. McCormick having died, the name was changed to Dunham, Carrigan & Hayden Co. In 1884, the concern, then Dunham, Carrigan & Co., erected a large building fronting on Beale Street and Main Street, thus running through from block to block, the buildings being four stories high on Beale Street and two stories on Main, the frontage on Main being double that of the Beale Street building. Underneath the whole, is a thoroughly water-tight concrete cellar. They travel the entire Pacific Coast, embracing Alaska, British Columbia, Washington, Idaho, Oregon, California, Nevada, Utah, Arizona Territory, New Mexico and the Republic of Mexico. As to special lines, it handles in addition to general Hardware, iron and steel, pipe and fittings, water and gas works supplies, mining, milling, steamship supplies, general engineering and steam fitting specialties; also electrical supplies, lamps, sporting goods, sewing machines and bicycles. The present officers of the corporation are: Brace Hayden, president; Andrew Carrigan, vice-president; Sanford Bennett, secretary and treasurer.

Dana Hardware Co., Boston, Mass.: Was established in 1820, incorporated with a capital stock of $150,000, cover New England, Northern New York, and also has an export department. They handle general Hardware, cordage, horse clothing, also some lines of heavy Hardware. The business is strictly wholesale. The business was established by Joseph B. Eaton, who was succeeded by Eaton & Palmer, Eaton, Lovett & Wellington, Eaton & Wellington, Eaton, Harrington & Dana, Eaton & Dana, and Otis D. Dana, who incorporated the business as the Dana Hardware Co., and was its president and treasurer. At his death his son Benj. O. Dana was elected president, and Leon C. Carter, treasurer and general manager. At the death of Benj. O. Dana, Mr. Francis B. Dana was elected to the presidency.

Orgill Bros. & Co., Memphis, Tenn., was incorporated in 1898 with the following officers: Edmund Orgill, president; Frederick Orgill, vice president; and Joseph Orgill, secretary and treasurer. The firm was established by R. T. Lamb and William Orgill in Memphis in 1847. Thomas Holyoke and Henry Lownes were admitted to the firm on the death of R. T. Lamb in 1849, and the firm's name was changed to Holyoke, Lownes & Co. Mr. Holyoke retired in 1854. In 1855 Edmund Orgill entered the firm and the style became Lownes, Orgill & Co. In 1859 Mr. Lownes retired and the firm's name was changed to Orgill Brothers

Digitized by Google

& Co., which has continued to the present time. William Orgill retired in 1871, and the present members of the firm are Edmund Orgill and his sons, Frederick and Joseph Orgill. The senior member of the firm, Edmund Orgill, had his office in New York city for many years, and did a large importing and export business in connection with the purchase of goods for his own firm. In 1881 the New York office was discontinued, and Edmund Orgill retired from active business life, but he still retains a lively interest in the firm's affairs. Joseph Orgill commenced his business career with Orgill Bros. & Co., in 1884, and was admitted to partnership in 1895. He is the general buyer of the firm. Frederick Orgill began his career in the Hardware business with the Wiebusch & Hilger Hardware Co., of New York city, in 1876, and remained with them until 1882, when he entered the employ of Orgill Brothers & Co., and was admitted to the firm in 1886, being made general manager of the house in 1891. The premises, Nos. 310 and 312 Front street, were purchased by the house in 1856, and have been occupied continuously from that time. They have recently purchased a site on the I. C. R. R. of 180 feet square, and have erected a warehouse thereon to better accommodate their increasing business. Their travellers cover the States of Tennessee, Arkansas, Mississippi, Alabama and portions of Missouri, Texas, Louisiana and Kentucky. The line of goods handled comprise shelf and builders' Hardware, cutlery, guns, agricultural implements, stoves and tinware, mill and railroad supplies, machinery and safes. A retail department is also carried on in connection with the jobbing business. The house is also agents for the Diebold Safe & Lock Co.'s fire proof and burglar proof safes

Brown & Wales, Boston, Mass.: J. G. Brown has been in the iron and steel business for about twenty-five years, and Wm. Q. Wales in the metal business for about twenty years. Some eight years ago they united the two lines and have since conducted the business in their present location, having added a full line of plumbing supplies about two years ago, and bicycle material, including sundries and parts, four years ago. The territory that they cover is New England, outside of Connecticut, and in some special lines, like Norway iron, bicycle grips, of which they are manufacturers, and bicycle chain, they sell more or less all over the country east of the Mississippi.

E. P. Sanderson & Co., Boston, Mass., are a Massachusetts company, paid in capital of $50,000. The business was established by E. P. Sanderson & Co., in 1886, and was incorporated on July 1st, 1888. The present officers are: E. P. Sanderson, president and treasurer; R. M. Vaughan, vice president; H. C. Winsor, secretary. They carry heavy and carriage Hardware, iron, steel, carriage woodwork, vehicle wheels, and carriage trimmings. Business is confined principally to the New England States and New York State, and is principally a jobbing business. Their customers also comprise the large consumers in this line of goods. Are also agents for the Standard Wheel Co., Sheldon Axle Co., Lee, Cowan & Bowen, Victor carriage cloths, and the American Curled Hair Co.'s hair for carriage builders' use. In addition to the Boston store covering Nos 16, 18, 20 and 22 Beverly street, where they occupy the entire building of six floors, they have a branch store in Amesbury, Mass., where they make a specialty of carriage builders' supplies. The Amesbury store was established in 1888.

George Tritch Hardware Co., Denver, Colo: This house was established in 1860 by George Tritch, who crossed the plains from the Missouri river with ox teams, and started his business with a stock brought out in this manner. It was continued in his name until 1885, when it was incorporated under the present name. The following are the officers: George Tritch, president; J. J. Tritch, vice president; Geo. Tritch, Jr., secretary and treasurer. Their stock is a very general one, with no particular specialties. A little over a year ago they added a sporting goods department, which has developed in gratifying proportions.

Empkie-Shugart Co., Council Bluffs, Iowa: Was established in 1872; incorporated, 1884. Cover Western Iowa, Northern Missouri, Northern Kansas, Eastern Colorado and the State of Nebraska. The present officers are: E. L. Shugart, president; Geo. F. Wright, vice-president; F. H. Hill, secretery; L. C. Empkie, manager and treasurer.

Bindley Hardware Co., Pittsburg, Pa.: Commenced business career in 1856, under the firm name of John England; it was changed in 1868 to the firm name of England & Bindley; in 1878 was changed to the firm name of Bindley Hardware Co., and in 1890 was incorporated under the same firm name. They cover the following territory: Pennsylvania, Maryland, Virginia, West Virginia, Ohio and Southern New York in a general jobbing business. They cover the entire United States in marketing the Pittsburg Visible Typewriting Machine, for which they are the sole distributors.

King Hardware Co., Atlanta, Ga.: Was organized in 1886. Covers the entire State of Georgia, part of Florada, Alabama, North and South Carolina; carry a general line of Hardware, including stoves and tinware. The present officers are: Geo. E. King, president; W. E. Newill, vice-president; Clyde L. King, secretary and treasurer.

May & Thomas Hardware Co , Birmingham, Ala.: Was formed on January 15th, 1890, and the officers are as follows: C. E. Thomas, president; J. H. McCune, vice-president; T. F. Wimberly, treasurer; T. W. Gathright, secretary. They cover Alabama and a portion of Mississippi and Georgia; carry a full line of all kinds of heavy and shelf Hardware, together with a complete line of building material consisting of sash, doors, blinds, lime and cement.

Watkins-Cottrell Co., Richmond, Va.: Was organized July 1st, 1896, being the consolidation of the old concern of Cottrell, Watkins & Co., which has been in the jobbing business in that city for thirty years or more, and the Watkins Hardware Co., which was an offshoot of the old concern. Both of them were doing a nice business, but since the consolidation have found their business has been very much increased, and at this time are doing as much as they can attend to properly. Have now eight to ten representatives on the road, and canvass pretty thoroughly the States of Virginia, North Carolina, South Carolina and a small portion of Georgia. The officers of the company are: W. S. Robertson, president; Chas. H. Watkins, vice-president; E. T. Robertson, secretary; Randolph Watkins, treasurer. They carry a full line of Hardware, cutlery and guns, and a line of agricultural implements, together with a full line of tin stamped ware.

Patrick & Luthe Co., Des Moines, Iowa: The origin of this well-known firm dates back to the late sixties, between which time and 1892, under different styles, it conducted a large wholesale and retail house at McGregor, located in the northeastern corner of the State, from where it successfully covered parts of Wisconsin, Iowa, Minnesota, and Dakota. In 1891 the firm incorporated under the present style with J. P. Patrick as president, and F. H. Luthe as secretary, under which management it has continued without change. Recognizing the possibility of its State to support a large exclusive Hardware jobbing house centrally located, this firm in 1892 decided to remove its business to the capital and commercial centre of the State—Des Moines—a representative and flourishing city of substantiability and great commercial possibilities, having at that time and still retaining seventeen different means of approach and exit over railroad lines, giving a command of trade from

Digitized by Google

as many directions as there are inclinations to the magnetic needle. Establishing itself at the corner of Second and Walnut Streets, it occupies the large four story building with basement, indicated by Nos. 200, 202, 204 Walnut Street. An inspection of the stock therein contained, reveals an immense assortment of all goods required in the complete equipment of a modern retail Hardware store and tin shop. In adopting different lines of goods, this firm recognizes the value of reputation in brands and makes, and takes pleasure in announcing that in a long list of items that could be enumerated between Apollo galvanized sheet iron and Chisholm's scoops it chooses to pin its faith to wares of established merit. It is ably represented upon the road by a corps of efficient traveling salesmen, who cover their territory at regular intervals.

Beck & Gregg Hardware Co., Atlanta, Ga.: Founded January 1, 1866, by Tommey & Stewart. On July 1, 1870, the firm became Tommey, Stewart & Beck. July 1, 1878, Mr. Stewart retired and Mr. Gregg was admitted, making the firm Tommey, Gregg & Beck. July 1, 1880, Mr. Tommey retired and Mr. Crumley was admitted, making the firm Beck, Gregg & Co. July 1, 1883, the firm was incorporated as the Beck & Gregg Hardware Co , which was the first incorporated mercantile business house in the South. The officers are: L. H. Beck, president; W. M. Crumley, vice-president; W.A. Parker, secretary and treasurer. The house occupies a building containing 64,000 square feet net floor space. They find business in the States of North and South Carolina, Georgia, Florida, Alabama, Mississippi and Tennessee; do a general Hardware business; also a supply trade in such articles as go to railroads, machine works, factories, mills, mines, etc.; working force consists of sixty men in all, and keep twenty-two traveling men on the road.

Weaver, Palmer & Richmond, Rochester, N. Y.: Their territory, naturally described as Western and Central New York; lines consist of general shelf Hardware, house-furnishing goods, builders' trimmings, agricultural tools and implements, tin plate and sheet iron and the special lines mentioned below: The general wholesale agency for S. L. Allen & Co., manufacturers of Planet Jr. implements; for rope and cordage manufactured by the Columbia Cordage Co., Auburn, N. Y.; the carborundum materials manufactured at Niagara Falls, N. Y.; for the Dodge Wood Split Pulleys; also the local agency for Oliver chilled plows. Some of the following special lines of goods which they handle, are Batcheller & Sons' hay and manure forks; Landers, Frary & Clark's table cutlery and Philadelphia Lawn Mowers. Also manufacturers of Ever Ready Tub Hoops. The members of this firm consist of S. J Weaver, Griff D. Palmer and Lee Richmond.

C. W. Hackett Hardware Co., St. Paul, Minn : Is a continuation of the business established by C. D. Strong n 1860, as a retail business, to which was added in a few years a small wholesale business. In January, 1873, Mr. Hackett came into the firm, the style of which was changed from C. D. Strong & Co. to Strong, Hackett & Chapin, and to an exclusively wholesale business It continued under this name until the death of Mr. Chapin in 1878, when it was changed to Strong, Hackett & Co. In 1885 the business was incorporated under the name of Strong-Hackett Hardware Co. In January, 1889, Mr. Strong sold his interest in the company to Mr. Hackett, and the company's name was changed to its present style, the C. W. Hackett Hardware Co The officers of the company are: C. W. Hackett, president; T. G Walther, vice-president; H. B. Gates, secretary and treasurer; J. C. Henry, assistant treasurer. The business originally was confined to a small part of the State of Minnesota. The territory now covered embraces all of Minnesota, North Dakota, South Dakota, Northern Iowa, Northern Nebraska, Northern Wisconsin, Montana, Idaho and Washington.

Lee-Glass-Andreesen Hardware Co., Omaha, Neb.: Established early in the year of 1880, under the firm name of H. J. Lee & Co. In September of the same year, E. M. Andreesen was admitted into partnership of the concern, and the firm name was changed to Lee, Fried & Co. In January, 1888, same was incorporated under the name of Lee-Clarke-Andreesen Hardware Co. In January, 1899, the firm name was changed to Lee-Glass-Andreesen Hardware Co. The present officers are: H. J. Lee, president; J. C Lee, vice-president; E. M. Andreesen, treasurer, and W. M. Glass, secretary and manager. Carry a full and complete line of builders' Hardware, mechanics' tools, nails, barb wire, sheet iron and tin plate; stamped, pieced and japanned tinware; guns, rifles, ammunition and sporting goods, bicycles and bicycle sundries, paints, oils and varnishes. The territory covered is as follows: Western Iowa, Northwestern Missouri, Northern Kansas, Western South Dakota, the entire States of Nebraska, Colorado, Wyoming, Utah, Idaho and part of Montana.

Palmer Hardware Co., Savannah, Ga.: Was founded in 1852, and was then styled Samuel Palmer & Son. On the death of Samuel Palmer, the firm name changed to Palmer & Deppish, being composed of Samuel B., who was the son in the former concern, Herbert A. Palmer and J. H Deppish On the death of Mr. Deppish, the firm was changed to Palmer Bros. and ran under that name for quite a while, and finally it was changed to Palmer Hardware Co. and has so remained until now. Is composed of Samuel B. Palmer, president; Herbert A. Palmer, vice-president; Henry W. Palmer, treasurer; all brothers and sons of Samuel Palmer, the originator of the business, and Armin B. Palmer, secretary, and son of Herbert A. Territory extends from the southern portion of South Carolina through Southwest Georgia and the northern portion of Florida, embracing some of the finest turpentine farms, saw mills and farms that are to be found in the Southern States.

H. W. Luetkemeyer & Sons, Cleveland, Ohio: In 1849, two young Germans, whose names were as long as their capital was short, formed a partnership to do a retail Hardware business; they styled themselves Luetkemeyer & Schmidthusen, had lots of energy and push, coupled with ability. This partnership continued until November 1, 1858, at which time H. W. Luetkemeyer bought out his partner's interests, continuing the business alone, and by close attention to details, conservative management and long hours (from 5 in the morning until 10:30 at night), the business continued to prosper. In the year 1878, his sons, E. H. Luetkemeyer and G. W. Luetkemeyer, joined him in his efforts, from which time the business has gradually increased and changed from retail to wholesale and retail, until now they have eighteen travelers on the road, covering Ohio, Indiana, Michigan, Pennysylvania, New York, West Virginia and Kentucky, and have sixty-four employees on their pay roll. In 1889, the firm was changed to H W. Luetkemeyer & Sons by the addition of 310 pounds avoirdupois in the shape of E. H. and G.W.Luetkemeyer, who are now respectively looking after the buying and finances of the concern. The retail room of which they are justly very proud is in charge of C. R. Luetkemeyer, who was admitted to partnership in 1897. This growing business is sub-divided into nine departments—cabinet, saddlery, builders, carriage and wagon makers, farriers' supplies, tinware and house-furnishing goods, farm implements, paints, oils, varnishes and brushes, bicycle and bicycle sundries, all of which are in the hands of able lieutenants, to whom a large share of the success of this house is due.

Marshall-Wells Hardware Co., Duluth, Minn.: Was estab-

Digitized by Google

lshed some ten years ago by Wells, Stone & Co., of Saginaw, Mich., then conducting a wholesale grocery business in that city, as well as in Duluth That firm, having large timber interests in that section, and after having commenced the construction of the Duluth & Winnipeg railroad, founded the Hardware house in close connection with these and other interests. Later the firm was consolidated with A. B. Chapin & Co., wholesale Hardware, under the name of the Chapin-Wells Hardware Co , which continued until the spring of 1893, when A. M. Marshall came from Saginaw and purchased a large interest, the name then being changed to the Marshall-Wells Hardware Co., and the capital increased to $300,000, with Mr. Marshall as president and manager, as at present. H. C. Marshall, formerly buyer in New York City for the Hardware Syndicate, came there January 1, 1896, to accept a position as one of the directors and buyer for this company. He is also its treasurer. The vice-president, A. H. Comstock, also a director, was for many years cashier of the Home National Bank of Saginaw, coming to Duluth and this company on January 1, 1895. F. W. Parsons, the secretary, formerly of Buffalo, has been with the institution from the date it commenced business.

Albany Hardware & Iron Co., Albany, N. Y.: This business began over 100 years ago, and now has a substantial trade, reaching out to a radius of 150 miles. The business was established in the last century and came down in succession through Samuel Hill, William Humphrey, Viele, Coles & Woodruff, Davidson & Viele and M. E. Viele to the present company, which was incorporated under the New York State laws, June 17, 1891, with a capital stock of $125,000. Their stock is one of the most complete and diversified in the State, including as it does bar and sheet iron, steel, tin plate, copper, zinc, nails; factory, mill and builders' supplies; blacksmiths', mechanics', carpenters' tools; household and hotel goods; besides, they are proprietors of the Ajax tin plates and galvanized sheets, "Gloss" Steel Beauty Oil Heaters, and handle the entire lot of the Albany Pump Co. and Albany Tool Co.'s products. To carry on this large business it requires exceptional facilities, which they possess in the fine main store, Nos. 39, 41 and 43 State Street, with a frontage of 58 feet; the branch store, No. 73 State Street, and the warehouse, fronting 80 feet on Hamilton Street, 185 feet on Union Street and 85 feet on Division Street. The firm is ably officered in Chas. H. Turner, president; W. B. Wackerhagen, secretary, and Jas. K. Dunscomb, treasurer, all capable and well-known business men. These, with Seth Wheeler, Peter Kinear and George I. Amsdell, constitute the board of directors. Mr. Turner has been president since 1891 and with the company for twenty-seven years. He was one of the founders of the present company, is a charter member of the Albany Club and president of the New York Association of Hardware Jobbers. Mr. Wackerhagen, also one of the founders, has been secretary since 1891, a member of the Fort Orange Club and other organizations, is a native of New York State, and has been connected with the house twenty years. Mr. Dunscomb has been treasurer since 1891. Before associating himself with the A. H. & I. Co., he was one of the firm of Phillips & Dunscomb, wholesale lumber dealers. He also is a member of the Fort Orange Club, as well as other organizations.

Frye, Phipps & Co , Boston, Mass.: Was established originally in 1816 by Montgomery Newall, at No. 6 Broad Street, Boston; from which place he removed to No 28 Broad in 1820 In 1831 he again moved to No. 83 State Street; where he remained till 1851, then going to No. 12 Pearl Street. In 1853 the firm name became Wilds, Coverley & Co., and occupied premises at No. 37 Pearl Street. In 1855, J. N. Frye, the head of the present firm, was admitted to partnership; the name being changed to Coverley, Frye & Co. In 1858 a new partner was admitted; and the name changed to Coverley, Frye & Knapp. It continued thus till 1860 when Mr. Knapp left the firm; the name being changed back to Coverley, Frye & Co ; and the location changed to No. 150 Congress Street. In 1864, Mr. Phipps was admitted and the name changed to the present one. The Boston fire in 1872 made new premises necessary; and the firm located at No. 118 Milk Street; remaining there till 1875; and then going to their present address, Nos. 23 and 25 Pearl Street. In 1892 A. M. Wiley and E. L. Richards were admitted to partnership; and in 1893 F. M. Smith was taken in. Frye, Phipps & Co. are unique in one respect; that being, that each of the four present members of the firm began, and bids fair to end, his business experience with the house. Mr. Frye is now entering upon his fifty-first year of business life; having entered the firm in 1849. He always has been, and is still, a most ardent sportsman; as a stock of choice guns, and a pile of targets with the bull's eyes pretty well cut out, will attest. He states with pardonable pride that he killed his first deer in 1838; and has since hunted from Nova Scotia to Louisiana. Their trade is strictly wholesale and largely in New England. Among their specialties may be mentioned Russell & Erwin's builders Hardware, Henry Disston's saws, Nicholson's files, Ames shovels; and the Bonnie Blue axe.

Wells & Nellegar Co., Chicago, Ill.: Was organized as a wholesale business in 1878 by Robert M. Wells and John B. Nellegar. In 1883 they incorporated the Wells & Nellegar Co. with a capital stock of $100,000, with J. B. Nellegar, president; R. M. Wells, treasurer, and J. B. Bettles, secretary. About this time the business was removed from No. 151 Lake Street to Nos. 72, 74 and 76 Lake Street, its present home. The original capital stock of $100,000 was increased in 1885 to $125,000, in 1888 to $137,500, in 1892 to $150,000, in 1896 to $200,000. The present officers are: J. B. Nellegar, president; Robert M. Wells, first vice-president and treasurer; James H. Paterson, second vice-president; J. B. Bettles, secretary. These, with Philip R. Woodford, constitute the board of directors.

The Sirens of Business Competition.

Since making this topic one for special thought there has repeatedly come to my mind an incident related of Ulysses. You remember, when returning in his ships, of the many incidents which befell his company, and as he desired to avoid others, that when he was about to pass the point where the beautiful but baleful sirens sang he had himself lashed to the ship and had his sailors' ears filled with wax that they might not hear; for it is related that none heard and lived Those who heard would cast themselves in the sea and be dashed to death against the rocks in their efforts to reach these attractive sirens. Ulysses, enchanted as others had been, strove in vain for release from his bonds. The narrative concludes with the statement that he was the only one who heard the sirens and lived, and that the sirens in despair cast themselves into the sea and were lost.

Is it possible for us to bind ourselves to our commercial bark with strong ties of business prudence, common sense, broad mindedness and wise methods, and to so fill the heads of our salesmen with other thoughts that they may not hear the sirens' unreasonable song of competition, and thus be impelled to throw themselves into the sea to perish? Is it possible that these sirens can be so discouraged that they will not further tempt us to swerve from the true course? Then shall our bark reach the harbor in safety, laden with the successes of the voyage, having won for us retirement from further strife and proper enjoyment of the fruits of our labors.—*W. H. Preston.*

The area of Cuba equals that of Pennsylvania; its length being 775 miles, and its width varying from 30 to 160 miles.

UNIVERSAL SHARPENING MACHINES.

HAND POWER MACHINES.

	EACH.
No. 2, Japanned,	$3.50
No. 4, Nickel-Plated	$5.00

For household and general use.

FOOT POWER MACHINE.

No. 1, $25.00 each

For Packers, Tanners, Butchers, Farmers, Hotels and Restaurants.

Liberal Discount to the Trade.

Most perfect knife sharpener made.

Easily operated and quick work.

The degree of perfection attained by the use of this machine is far superior to that accomplished by the ordinary method of hand work.

These machines are practical, based on correct mechanical principles and have reached their present state of perfection after many years of experimenting.

They are simple in their construction, very durable and sharpen with great rapidity.

Knives keep their proper shape and last much longer when sharpened with the "Universal" machine. Silver-plated knives can be sharpened without damaging the blade.

Every dealer and every family should have one of these machines.

We guarantee the "Universal" machine to be as we represent it, "practical, convenient and perfect"

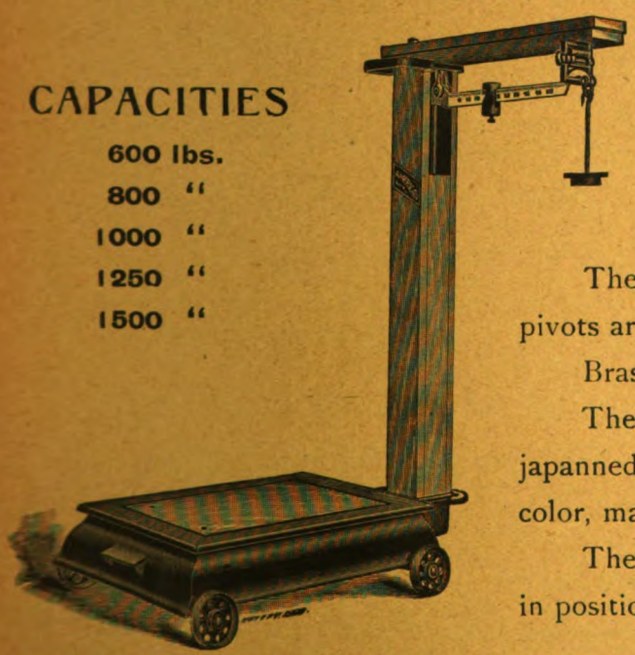
THE OSGOOD PATENT SCALE,

United States Standard.

WAGON, COAL, HAY, BARN, STOCK, COTTON, SUGAR.

Beams—Heavy Brass, highly polished
Beam Boxes—Large Standard Size, nicely painted.
Platform—Eight regular sizes from 7 x 3 feet to 8 x 22 feet. Can make **any special size** to fit any barn or building at small additional cost.
Capacity—From 3 to 15 tons.
Extension Levers—To carry beam any distance from platform at slight extra cost.
With or Without Pit—Same depth as any scale and shallower than many, or built on top of ground, saving pit entirely.



Simple—From 4 to 8 less bearings than any scale on the market. Any carpenter can erect our scale from our simple directions.
Strong—Tested to double the capacity before leaving factory.
Accurate—By use of Osgood Patent Bearings. Sealed with U. S. Standard weights.
Guaranteed—The **best** in the market and every scale goes out under the **"Osgood"** guarantee backed up by 40 years reputation.
20,000—Now in use, giving perfect satisfaction.

Before Buying, send for full Descriptive Circulars, etc. Lowest Prices in the Market for good goods.

THE AMERICAN SCALE.

CAPACITIES

600 lbs.
800 "
1000 "
1250 "
1500 "

Has been on the market for years, and has become favorably known as the finest scale that is being offered the trade to-day at the price.

They are carefully adjusted by competent workmen, and are guaranteed U. S. Standard Scales.

The material throughout is of the best quality, and all pivots are of steel.

Brass beam with sliding point and thumb screw.

The brass work is highly polished. The iron work is japanned in black and the wood work is finished in its natural color, making a very attractive combination.

They are carefully packed for shipment, and can be set in position ready for use in a few minutes.

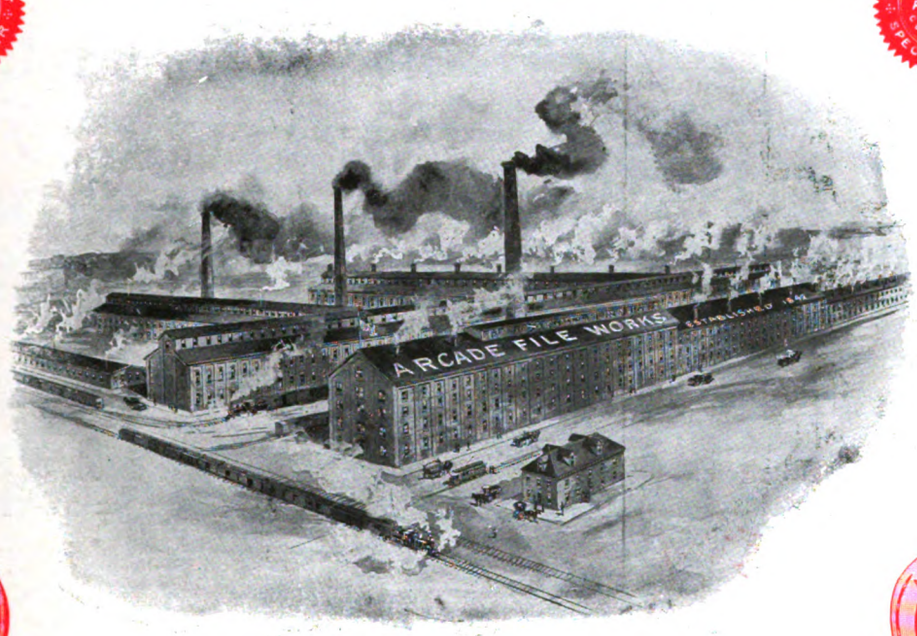
IF IT'S AN ARCADE, IT'S THE BEST.



That the ARCADE FILE WORKS at Anderson, Indiana, is the largest and most completely equipped plant for the manufacture of files in the world is a minor point. It's product is what you are interested in, and the Arcade product stands at the head of file production for the common sense reason that their methods and facilities are ahead of their competitors.

Mr. Alfred Weed, who is the superintendent and mechanical head of the company, is one of the oldest file makers in the United States, and has probably taken out more patents on file machinery than any other living manufacturer. The entire plant at Anderson is the product of his skill and practical experience, comprising machinery especially designed for turning out every detail of the work, not only by the most careful and systematic methods, but with the greatest possible saving of time and money. Fifty Cents goes as far here as a Dollar in many of the old fashioned plants. Then, too,

LOCKWOOD CYLINDER LOCKS.

We assert without fear of disproval that we manufacture a line of **FINE CYLINDER LOCKS** which are unequalled----in fact, we manufacture the **BEST** line of these goods made in this **COUNTRY,** taking the word best at its full meaning.

In **SECURITY, MECHANICAL EXCELLENCE** and **MULTIPLICITY** of **CHANCES** obtained there is only one other line that is just as good, but in the matter of **PRICE,** quality for quality, size for size, we give more **VALUE** for a **DOLLAR** than our famed competitor----therefore our claim of the best line of **CYLINDER LOCKS** made in this **COUNTRY.**

We invite the attention of **ARCHITECTS** and **DEALERS** to the above assertion, knowing that a careful inspection by competent **CRITICS** will **ESTABLISH** our **CLAIM.**

We also manufacture a full line of Fine Builders' Hardware in the **PUREST** of **BRONZE METAL.** Also a complete line of Steel and Iron Builders' Hardware in all the popular finishes. For further information apply to our Sales Agents,

The Hayne Suspended Inkwell.

A suspended inkstand above the table surface of a roll-top desk is of such obvious advantage that it is a wonder that the idea had not been thought of before the Hayne Suspended Inkwell, which is being put upon the market by the Universal Specialty Co., No. 151 Chambers Street, New York, was invented. The saving secured in space alone would be sufficient to recommend it, even if there were no other points in its favor. Economy—economy in expendi-

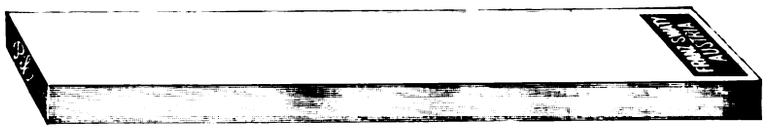
ture, economy in material, economy in space, not alone in the office at large, but on the office desk as well and in particular—is one of the watchwords of the hour, and certainly more room is obtained upon a roll-top desk, and the idea of economy in space subserved by suspending an inkstand above the desk surface rather than having it, even though it be comparatively smaller in size, in the place where the usual inkstand is to be found. Of the two illustrations of the Hayne Inkwell given herewith, one shows the device attached to the desk shelving, from which a better idea can be gained of how it is done and also what the inkwell looks like than from the second, which is intended to show the orderly arrangement of which a desk is capable where a Hayne Inkwell is used. A few of the advantages of the Hayne Inkwell, as pointed out by the manufacturer, may be added. One is that its suspended position prevents spattering or spilling of ink. Another is that the pen will be thoroughly inked every time it is dipped. A third is that it is impossible to submerge the penholder. The last two named are most desirable points, and are not due to any patented or automatic device, but merely to the shape of the bottles and the inkwell tube. The last named point means that the penholder is not stained, and consequently

that the fingers are kept free from ink. Indeed, the manufacturer says that it was through using this inkwell for a year, thereby having its good points forced upon him, that he became interested in the patent, while the patentee states that the idea was suggested to him in his work as an architect. These and other advantages possessed by the Hayne Inkwell are summarized as follows: 1, it leaves the entire table surface of the desk free and clear; 2, it holds two kinds of ink and three times the quantity that an ordinary inkwell does, and also a neat sponge cup; 3, it is the easiest, most natural position for use, no reaching, spattering or spilling; 4, it occupies entirely unused space and is always in the same spot; 5, it can be put on or taken off the desk in a moment, no screws or nails, only a pair of small spring clips being used; 6, the ink does not evaporate or become thick; 7, it cannot fail to ink your pen thoroughly; 8, nothing about it to get out of order; 9, it has a most convenient pen rack; 10, it is a very handsome ornament; and 11, it costs less than the poorer kinds. The inkwell is made of heavy stamped brass, and is manufactured in three styles of finish, as follows: Plain, nickel-plated, electro lacquered, polished brass, and electro lacquered, embossed brass. The fittings are made of flint glass, and each inkwell is packed in a neat wooden box, which is fitted with a slide cover and in which the article may be safely shipped by mail.

Sectional Window Weights.

One of the objectionable features in the old style window weights is that the dealer is obliged to keep a large and cumbersome assortment of pieces in stock; more or less of which are in sizes seldom called for, and remaining on hand as old stock. This difficulty seems to be satisfactorily obviated by the Walda Sectional Window Weights, now being placed on the market by the Barney & Reed Mfg. Co., of Boston, Mass.

These weights, as will be seen from the illustration, are made in two forms—round and square—the former being used for ordinary purposes, and the latter being designed to take the place of special, or lead, weights. The dealer with an assortment of only six sizes is enabled to fill any



order at once without breaking a weight or requiring any special size. The principle of the weight is extremely simple. The pieces interlock at right angles only, and are "built up" to the necessary amount to balance any window, simply by adding on the required number. The first cost is about the same as the old style; but a great saving of time, labor and expense is claimed by the manufacturers. In the specifications of the builder's Hardware for the new South Station, in Boston, lead weights were called for; but an investigation of the merits of the Sectional Weights decided the contract in their favor, 140 tons being used. Hitherto it has been thought necessary to use lead weights for heavy sashes; but the sectional square weight seems to meet all requirements at one-sixth the cost. Another point in its favor is the short pocket required, ten inches being the limit. The weights hang exactly from the centre, and thus escape contact with the frame. They are packed and shipped in crates of 100 pounds each in the desired sizes, each piece being plainly marked with its weight, and full instructions accompanying every order, showing the different combinations required to adjust any window. These goods are sold through the dealers only, all inquiries being referred to the local man. Descriptive catalogues will be furnished on application.

The Swaty Hone.

The Pike Mfg. Co., Pike Station, N. H., and No. 151 Chambers Street, New York, are sole American agents for the celebrated Swaty Razor Hone, here illustrated. This hone is well-known to-day among the barbers and barbers' supply trade of the country as the fastest-cutting of

Digitized by Google

razor hones. It will grind down a dull razor in one-third the time required on the ordinary Belgian hone; at the same time it imparts a very fine, keen edge. Further than this the quality is always uniform. The Pike Mfg. Co. also call attention to their very complete stock of Belgian hones and Escher Water Hones. The gentleman in charge of their razor hone department spent over four months last summer in Europe personally selecting this stock of hones at the quarries, and as this is the only way it is possible to get a large quantity of the very best grades, they lay claim to having the best graded stock ever carried. It is their

intention to personally select their razor hones every season hereafter, and they intend to make direct importation for the largest customers a special feature of the business.

They have also recently added the importation of French and Bavarian grindstones for concaving razors, and are now importing considerable quantities of Craigleith grindstones for the use of glass-grinders, opticians, etc. A complete sample line of all these goods is on display at their New York office, No. 151 Chambers Street.

Plumbing and Bath Room Specialties.

Huebel & Manger, Nos. 286 to 290 Graham Street, Brooklyn, N. Y., are supplying the Hardware and plumbing

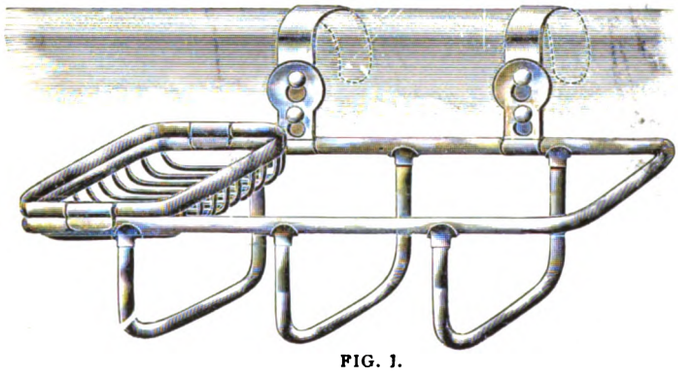


FIG. 1.

trade with an exceedingly handsome and desirable line of specialties, a few illustrations of which we present in this article.

The Sponge Holder with detachable soap dish, shown in Fig. 1, is made of brass, and is heavily nickel plated,

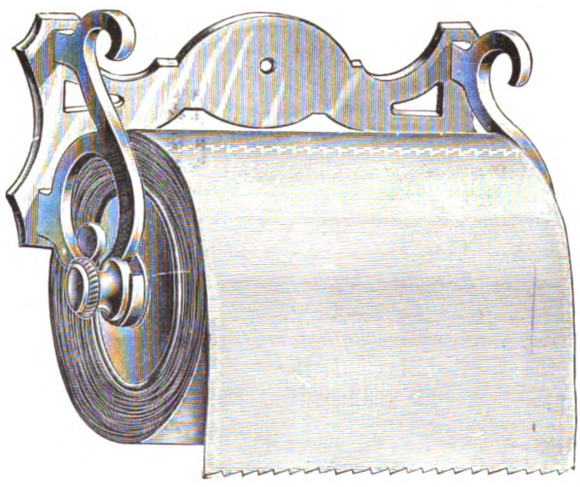

FIG. 2.

strongly and neatly made; forms a very essential attachment to a bath tub and takes up very little space. The soap dish is so arranged it can be placed on either end without inconvenience, making the holder either right or left hand. They come packed two holders in a box, detachable bands being provided, together with spring clip for adjusting.

The Toilet Paper Holder, Fig. 2, is of cast brass, nickel plated. It is made in a very ornamental and stylish design, and is a positively pleasing addition to any lavatory.

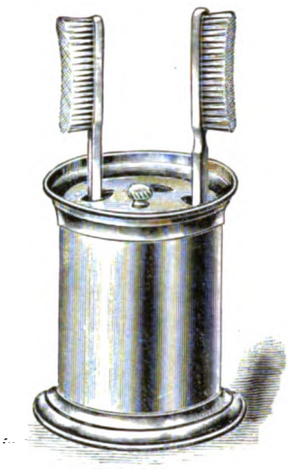

FIG. 8.

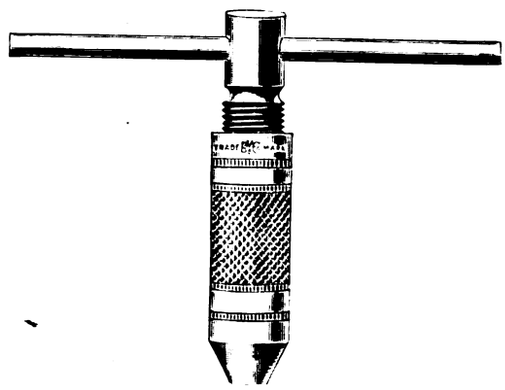
By a simple device, the roll of paper is readily placed in position, the illustration giving a very good representation of its attractive appearance.



The Tooth Brush Holder, Fig. 3, differs so acceptably from similar receptacles, together with the ease with which it can be kept in a cleanly condition, by keeping the brushes entirely separate and away from each other, would commend it to anyone. The article is made of brass, handsomely nickel plated and designed to hold four brushes. The perforated disc forming the top can be easily unscrewed whenever deemed necessary.

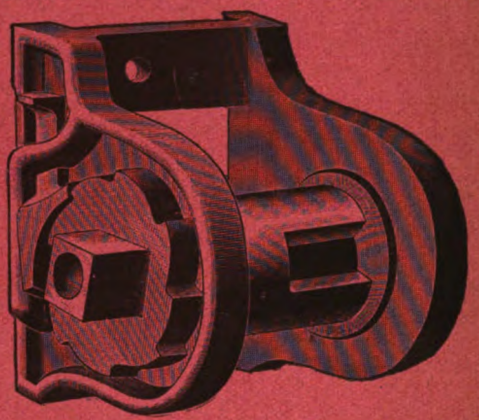
Other of the specialties made by this company include various forms of soap dishes, sponge holders, comb and brush holders, tumbler holders, soap cups, towel bars, towel rollers, towel rings, rope hooks, cigar rests, match boxes, wash rag holders, etc , etc. They also make an extensive line of electrical supplies. Their advertisement appears elsewhere in this issue.

Their catalogue should be in the hands of every dealer in this up-to-date line of goods, and if not within reach, a postal card will bring it.

Adjustable Tap Wrench.

Braunsdorf-Mueller Co., Elizabeth, N. J., are placing on the market a neat adjustable tap wrench, which holds taps 1-32 to ¼ inch diameter. This is made of tool steel, nicely hardened, and will stand a severe strain without the slightest twist or lost motion. This company also make a fine line of Knurls, Die Holders, Belt Punches, Screw Chasers,

Marking Awls, etc. Henry R. Braunsdorf, who until recently was connected with the well-known tool house of Hammacher, Schlemmer & Co., is considered by the trade a critic in the tool line. All tools are manufactured under the personal supervision of Charles F. Mueller, who is a practical tool maker and an expert temperer of steel. Their aim is to manufacture only such tools as they can offer to the trade under the fullest guarantee.



Digitized by Google

"I. X. L." SPECIALTIES.

The dealer and consumer are saved much time and trouble in handling the *"I. X. L."* Improved Ratchet, as it is so constructed that all the parts are held together as one piece, which avoids the losing of PAWLS, and it will not fall to pieces when the wire slackens after being adjusted to the fence. It has a quick action, positive catch and no keys to fall out.

Chain Pumps have always been in favor on account of the many advantages they have over others, and the objection to the wood curb and tubing is overcome in the I. X. L. Galvanized Steel Curb and Steel Tubing, making it the best and most beautiful pump on the market.

We especially call attention to its superiority over the old Wooden Suction and Iron Pitcher Pumps, as there are no valves to get out of order or dry out, and it will always throw a larger stream of water than any other Pump on the Market.

It Throws More Water and Pumps Easier than any other Pump in existence.

It Keeps the Water Pure and Fresh.

"HERCULES CASTERS"

Are the Strongest and Best in the market, having all the advantages of other casters, and Special Features of their own, namely, a larger anti-friction wheel, being one-half the diameter of the floor wheel, which makes it revolve easier, its long stem giving sufficient side motion so as to let the floor wheels adjust themselves to uneven surfaces.

Why You Should use the I. X. L. Galvanized Steel Tubing.

It does not make the water taste as wood tubing does.
It will not rust, being made out of No. 24 Gauge Best Galvanized Steel.
It will not rot or accumulate filth, and leaves the water clear and pure.
It is anti-freezing, as the reservoir piece has a small hole in same, which allows the water to run out.
It only weighs ⅛ lb. to the foot, while wood tubing soaked with water weighs 6 lbs. or more per foot.
It can be used in wells as deep as 40 feet.

The I. X. L. Galvanized Steel Tubing can also be used on any make of wood curbs, as the stirrup on all other curbs will fit the square reservoir box on the Galvanized Tubing.

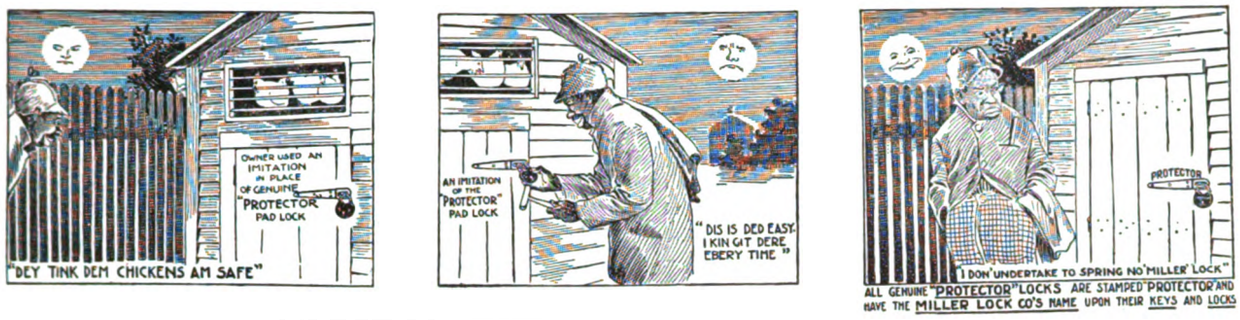

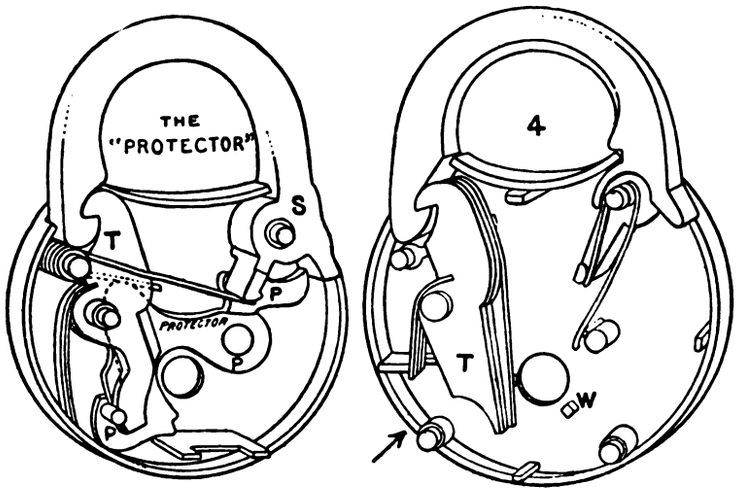

FIG. 4 is a good illustration of the interior make up of many of the imitations that are now offered in competition with the genuine **"PROTECTOR"** Padlocks. Sam has just looked into this matter and knows just where to use his little mallet.

He has learned not to fool with the **"PROTECTOR,"** the construction of which is exposed to view in the cut. In it, the 3rd lever, the **"PROTECTOR"** "P," acts as a tumbler and must be lifted by the Key before the other tumblers, "T," can be moved from their locked position. **This is patented.** The imitations omit it, and the rooster will be stolen.

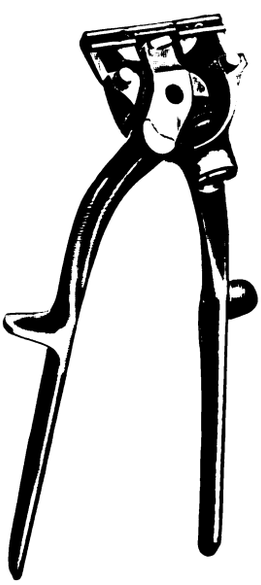
COATES CLIPPERS

Don't fail to handle a complete line of . . . COATES CLIPPERS.

MADE IN GREAT VARIETIES, BOTH HAND AND POWER

For **Barbers and Horsemen.**

Coates Patent Ball-Bearing Clippers



are the easiest running on the market. They are supplied with a hardened steel ball-case—which serves as a ball retainer. It is impossible for the hair or dirt to get at the balls.

A New Thing is the **Corrugated Duplex Pressure Plate.** By its use the tension is obtained exactly at the roots of the teeth where the resistance occurs in cutting hair. By this method it requires just one-half as much pressure on the plates to prevent them lifting in the hair, and consequently they operate in just that proportion easier.

A Novel Feature is the spring. It may be adjusted to fit the strength of any hand—a patent Pull Spring working parallel to the handles.

See that corrugated Bottom Pressure Plate, also the Ball Cases.

No. 171 Ball-Bearing "Easy Running."

"Lightning"

Reg Trade-Mark No.9583.

This Knife stands without a rival in the markets of the WORLD to-day. Many have attempted to imitate it, but in every instance **FAILURE** is the record. We shall continue to keep its qualities of material and workmanship up to its high standard

This Cut represents the tools we manufacture under a Patent issued to C. C. Brooks, November 2, 1897. This invention is "to produce a cutter or knife having a serrated cutting edge which may be ground on each side, as are ordinary knives, and without danger of destroying the serrations."

Thus we produce a blade without the scale always present on a blade which is ground on one side only, and which prevents a keen, smooth, durable edge ever being put upon it, no matter how much care may be taken in grinding that one side.

ONE TRIAL WILL CONVINCE.

Syndicate Buying.

Editor Hardware: While many of the more experienced Hardware merchants are familiar with syndicate buying in all its phases, there are some who regard it as a new invention still in the experimental stage; therefore I will state first that the syndicate buyer has been an important factor in trade circles for more than twenty-five years, during which time his position has been steadily strengthened by increasing his number of constituents, and in gaining more recognition from manufacturers, many of whom depend upon him to market a large percentage (and in some cases all) of the goods they produce.

It is now conservatively estimated that the syndicate buyers of New York represent over four hundred strictly Hardware houses, and purchase annually about fifteen million dollars worth of goods. This estimate does not include syndicate buyers for department stores, one or two of whom are very large buyers of Hardware specialties.

From its inception the system, while strongly supported by some, has been as strongly opposed by others, either side viewing the matter from a point of natural self interest; its supporters among the jobbers as well as manufacturers being content with the advantages gained through the instrumentality of the syndicate buyer, and as many have stated not wishing to advertise it to their competitors have been more silent on the subject, while its opponents in freely agitating the question have liberally advertised it to the syndicate buyer's advantage. In fact, the business has assumed such power and magnitude that many large manufacturers in association with others have acknowledged the wisdom of making special terms with the syndicate buyers as the best means of carrying out their plans to a profitable conclusion.

Originally the operators of this system confined their efforts to the jobbing trade alone, while of late years some of them have departed from this policy and now represent a number of retailers, so that syndicate buying has practically resolved itself into three classes as follows:

Class 1—Is an association of a limited number of large jobbers of about an equal class, each one of whom, as I understand it, has a voice in the management and policy of the central office, and by harmonious action in respect to combining their orders for certain classes of goods exemplifies syndicate buying in its true business sense.

This syndicate, while no doubt sustained at a heavy expense to each of its members, is undoubtedly of benefit to their interests since it has been in existence for years, and to all appearances is more strongly organized to-day than at any time in its previous history.

Class 2—Is the syndicate buyer claiming to represent jobbers only, but whose policy and methods are dictated by his own judgment, that is his clients having no special intercourse with each other in regard to shaping his policy, depending entirely upon his individual ability to benefit their interests.

This class of buyers represents a large number of houses and to my mind has proved the most popular and attractive to the jobbing trade in general on account of the comparative small cost of his services, and leaving his clients free to act more independently in the placing of their orders, and while he controls a very large volume of business, and in many cases is able to contract for very large quantities of goods, (thus obtaining special prices for his constituents) makes a special feature of reporting market changes in prices and other points of interest to his clients, and in which respect many jobbers have stated they consider his services invaluable as a guide to their general interests.

Class 3—Is the syndicate buyer representing both jobbers and retailers, and whose policy is similar to Class 2.

From the jobbers' standpoint any objections they may have to the system hinges on the fact of the syndicate buyers (Classes 2 and 3) having for their clients houses which they regard as not being entitled to the special benefits obtained for the larger ones.

The buyers' excuse for this is that the compensation and in other respects the support received from the large jobbers does not warrant the restrictions they would make in this respect, although I must point out here the fact that the jobbers frequently send the buyers orders for shipments direct to their customers, and for goods which manufacturers charge to the syndicate buyers' account, thus creating the impression at times that they represent certain small houses which they have no direct connection with. I consider it possible for the jobbers, in a measure, to regulate the above feature of the business, but through negotiations with the buyers direct it being to my mind a practical impossibility to seriously weaken the system through the manufacturers, which I have reason to believe has been attempted.

I know of at least one firm of syndicate buyers in Class 2 who, being in sympathy with the jobbers, would willingly meet them in discussing this question and present plausible suggestions for regulating same in line with their ideas.

THOMAS E. OLIVER.

This has been done in some sections of the country and could as easily be arranged for other sections.

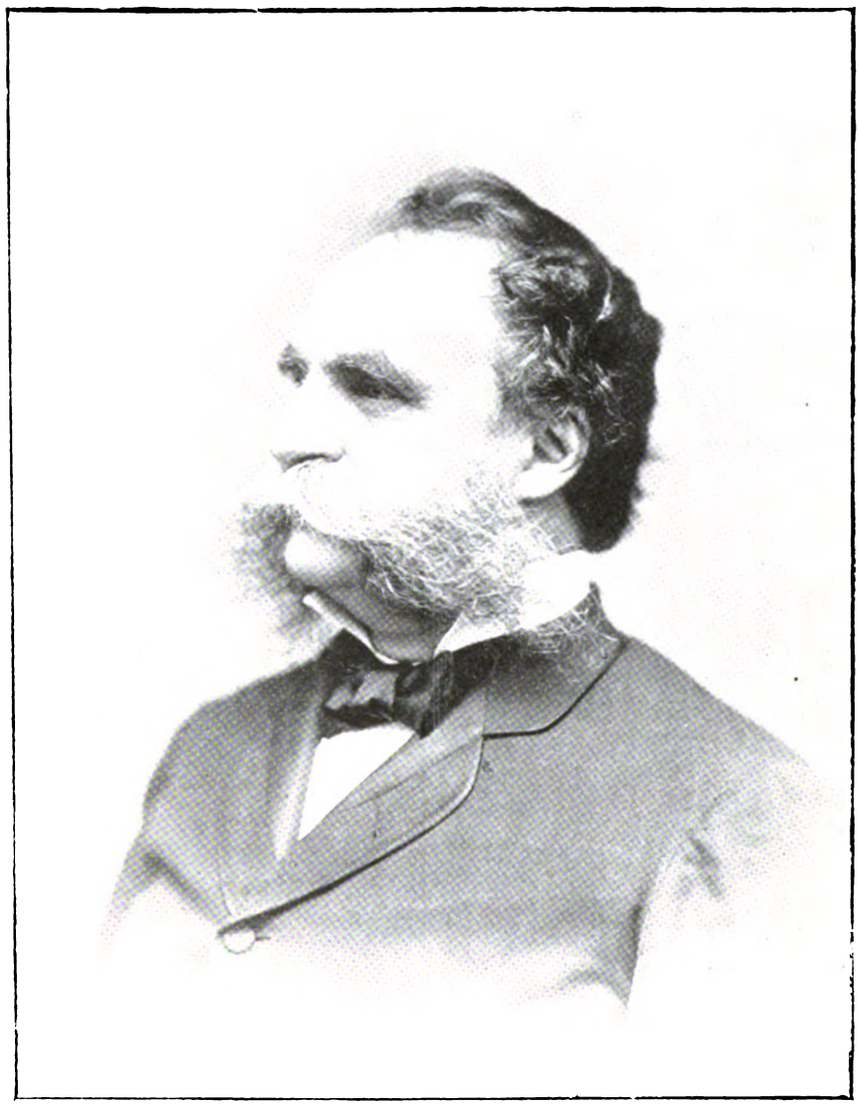
I cannot help but feel that the large jobbers can best protect their own interests by supporting the syndicate buyers rather than forcing them into seeking support from the smaller jobbers and large retailers in a more general way, and which would to my mind build up much stronger competition than the jobbers have heretofore had to contend with.

I say this feeling fully assured of the stability of and future success of the syndicate buying system, the tendency of the times undoubtedly making it yet more useful to the manufacturer as well as jobber.

THOMAS E. OLIVER,
Oliver Bros.

New York, April 4, 1899.

F. E. Kohler & Co., the well known manufacturers of Hardware specialties, Canton, Ohio, are fitting up for the manufacture of Wooden D Handles, for use in shovels and spades. They are led to this from the fact that the handle makers are in combination, and do not sell handles to outsiders. Anything which Kohler & Co. place upon the market can be depended upon as first class.



H. M. Putnam, formerly connected with the Simonds Rolling Machine Co., and later with the Fitchburg Steel Ball Co., has accepted a position with the Iver Johnson's Arms & Cycle Works, of Fitchburg, Mass.

President George H. Sargent.

George Henry Sargent, the recently elected president of the Hardware Club of New York, became a member of the Board of Governors of that body, on the death of the late William H. Williams. He has given to the Club a faithful and energetic service, acting among other duties, as Chairman of the Admissions' Committee, and one year ago was elected to the position of vice-president. On the refusal of Peter McCartee to again serve in the Board of Governers, the members of that body turned to Mr. Sargent, and his election to the high office which he holds, was made by unanimous vote.

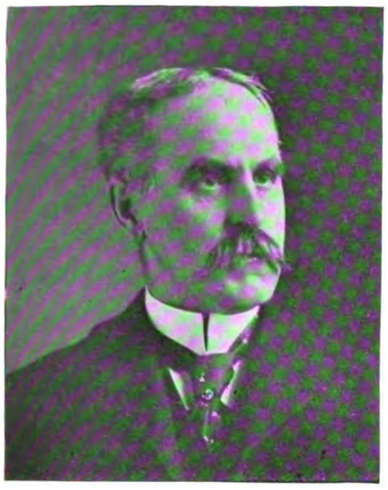
It is not necessary to tell the Hardware trade of the country about Mr. Sargent, or to more than refer incidentally to the eminent position which he holds in the confidence and respect of that trade. He came to this city in 1853, and joined himself to that stirring and active body of merchants who were engaged in laying the foundations of the splendid commercial and mercantile success, which is a part of the heritage of New York to-day.

GEORGE HENRY SARGENT.

In one sense, Mr. Sargent has come down rather than gone up, in the Hardware trade, as he began in limited quarters in the third loft, while to-day he is to be found, literally, as well as figuratively, on the ground floor, in the Hardware trade of this city. Any visitor to New York who enters the great establishment of Sargent & Co. on Leonard Street, and threads his way through the maze of desks, to the rear portion of the offices on the street floor, will certainly find Mr. Sargent at his desk, but never too busy to give a cordial greeting to his caller, and to make him feel, so far as Mr. Sargent is concerned, that his lines. while in this great city, have been cast in pleasant places.

We have had occasion heretofore to review the mercantile career of Mr. Sargent, and it is only necessary to add in this connection, that he has rightly won the high position which he holds in the respect and confidence of the trade. He has been a busy man for a great number of years, and is busy still, yet finds sufficient time to give to the presidency of the Hardware Club, that care and attention which its important duties require.

While Mr. Sargent is preeminently a business man, he is also a man of wide social and personal acquaintance, and numbers his friends among the most eminent of the professional and business men of the city, and finds them among the active men of every other city to which business or pleasure calls him. He is a man of rare educational endowments, a graduate of "Old Harvard," a member of the Union League, University, and other prominent clubs, a rare conversationalist, a man who has thought for himself. and knows how to express himself in the choicest language; and taking, all in all, is as genial and pleasant a person to encounter as one could wish to find. The Hardware Club is to be congratulated upon having for its present executive officer, one, of his high-standing and excellent qualities.



Peter McCartee has set a high mark as an ideal president, —and it is the highest compliment that can be paid to Mr. Sargent, to say that he will certainly prove a worthy and a fit successor to that gentleman.

The Knapp & Spencer Co.

The Knapp & Spencer Co., the title taken last year by the company formerly known as Knapp & Spalding Co., are well known to be in the front rank of the jobbers in the middle-west.

In a quiet way the business was opened in Sioux City in 1885; and the favorable location for distribution of goods,

C. A. KNAPP.

H. L. SPENCER.

seconded by the efficient corps of salesmen and the considerate, generous and prompt treatment of all orders, very soon resulted in a large line of customers. It is fair to say that customers were never more steadfast friends of a house than those whom Knapp & Spencer Co. place on their

C. E. HUGHSON.

W. H. PRESTON.

books. Many names now appearing on these books as customers started many years ago. Their trade covers Iowa, South Dakota, Southern North Dakota, Minnesota and Nebraska. Their lines include shelf Hardware, cutlery, sporting goods, sewing machines, paints, etc.

The officers of the company are: C. A. Knapp, president; H. L. Spencer, vice president; C. E. Hughson, secretary; W. H. Preston, treasurer.

All the above named, with the exception of H. L. Spencer, who resides at Oskaloosa, Ia., are actively engaged in the business, Mr. Kapp being general manager, and in charge of most of the buying, Mr Hughson managing the sales and bicycle departments, and Mr. Preston the credits and finances. All are well and favorably known in commercial circles.

Probably no company enjoys a larger mail order business proportioned to the sales, for the business is carefully systemized so that shipments are promptly made, and the splendid railroad facilities make Sioux City an unusually favorable point for prompt shipments.

The company has liberal capital, and the connection with it of wealthy investors is a guarantee that they are in position to avail themselves of any favorable opportunities for large purchases for cash.

Concerning the "Lightning."

Editor Hardware: It appears that a certain manufacturer is now proposing to furnish Hay Knives to the trade and to use the word "Lightning" in connection therewith, say on labels, boxes, etc., etc. We desire to give this timely notice to all interested that said word "Lightning," as applied to Hay Knives, is our lawful trade mark, duly registered, and is No. 9583 in the United States Patent office; that its validity has been affirmed in the strongest manner by a United States Circuit Court, and in these words: "The trade mark 'Lightning,' as applied to Hay Knives, is valid both at common law and by the Act of Congress of March 3, 1881." We shall guard our property to the utmost of our ability, and infringers thereof, either manufacturers or dealers, will kindly give this matter careful consideration. By fair dealing and a strict adherence to the principle of manufacturing A1 high-grade goods only, it comes to pass in these days that our trade mark is of especial value to us and we shall protect it accordingly. We shall esteem it a favor if the trade, wholesale or retail, will kindly report to us, or to our agents, Messrs. Wiebusch & Hilger, Limited, Nos. 9 to 15 Murray Street, New York, any information bearing on this matter which may come to their notice, thereby aiding us in disposing of an unprincipled competition. Clark & Parsons Co.

East Wilton, Me., March 27, 1899.

WHAT DOES THE WORD "JOBBER" MEAN?

Hardware feels that it has done its duty toward Hardware jobbers, and the Hardware trade generally, by the preparation and publication of the present special anniversary edition; but it does not feel competent of itself to attempt the definition of the words "Hardware Jobber." Search has been made through the various dictionaries in order to find their understanding of the word jobber, and the result is herewith given:

Bartlett's Dictionary of Americanisms: "One who purchases goods from importers and manufacturers by the package and sells to retailers."

The Century Dictionary: "One who purchases goods in bulk and resells them to smaller dealers; a middleman."

The Standard Dictionary: "One who buys goods in bulk from the importer or manufacturer and sells to the retailer; a middleman."

The Imperial Dictionary: "One who purchases goods from importers and sells to retailers."

Worcester's Dictionery: "One who buys goods of importers and manufacturers and sells to retailers."

Stormonth's English Directory: This word does not seem to be quite English in its make-up, at least not to the satisfaction of the makers of this dictionary, who define the word as: "Dealer on the Stock Exchange who is the intermediate agent between the stock broker and the public; a petty dealer in cattle, etc." The word jobbing is defined as "Buying and selling as a jobber; the purchasing from importers in order to sell to retailers."

Webster's dictionary: "One who buys goods from importers, wholesalers or manufacturers, and sells to retailers."

Better than the dictionary definitions, however, and more to the point so far as the same relate to the Hardware trade, are the subjoined expressions of opinion from leading Hardwaremen as to the scope and meaning of this term. The gentlemen quoted below were requested to use a dozen words or so in this definition, and have responded in a very prompt and willing manner, and we are satisfied that the entire trade will be under obligations to them for having thrown great light in a very original manner upon this uncertain theme. These responses are as follows:

Henry R. Towne, Yale & Towne Mfg. Co.: The term "Hardware Jobber" as now used is synonymous with "wholesale dealer" and applies correctly to a merchant who purchases from first hands, who carries in stock at least the goods ordinarily required by his customers, and who sells to the retail dealers through whom the ultimate consumer is finally reached.

William W. Supplee, Supplee Hardware Co.: A firm or corporation who have a sufficient amount of capital in business to enable them to purchase goods in large quantities direct from manufacturers; making their purchases in advance of the current season's trade; carrying at all times a complete and well assorted stock of goods suitable to supply the trade; so located to command the trade of the surrounding country; having in their employ a corpse of traveling salesmen and fully equipped with a clerical and working force to properly conduct the business.

George H. Sargent, Sargent & Co.: When, Mr. Editor, you requested me to give the correct definition of the term "Hardware Jobber," I said I have written reams *about* the term, "Hardware Jobber," as well as of the "terms" *to* the Hardware jobber, but I felt a good deal as the Irish historian did, who, when called upon to testify to some fact in Irish history, said with a readiness characteristic of his race, "Oh, history may be divid d into two parts, that which I never knew, and that which I have written and forgotten, ' and so about the Hardware jobbers, there is a lot I never knew about the "definition of the term," and there is ever so much I have written and forgotten, and I hope *they* are equally oblivious as to that. Once I wrote, in a plain, clear hand, quite a learned treatise, as I thought, on the duties and calling of the craft, and about the derivation of the term; whereupon I was soon informed by some of them, that there was a certain propriety in calling those persons jobbers who read my disquisition, because it was such a job to decipher my chirography and interpret my so called logic; and others said it required the patience of the old Testament Job—he who was so sorely afflicted—to comprehend my definition of their Profession (not *professions*) hence Job-bers. I had called them "middlemen," because sandwiched in between the manufacturers and retailers, with the "right of the road"—especially the cross roads—as to said manufacturers. Another person, better posted than myself about their "calling and election" defined jobbers as dealers who bought in bulk if they anticipated no decline in price, and in carload lots when very confidentially assured that a "big advance" was in sight, because of "a corner" or consolidation, but, he said, in selling the goods so favorably bought they were sometimes generous and self-sacrificing and turned out goods at "old prices" (*if* they agreed to). The definition you would apply to such generosity, would be kindhearted and self-sacrificing jobbers, when you might happen to find them after a diligent search. The strictly conscientious and God-fearing jobber *retails* no goods except to his best friends; and then only at friendship prices, which are about 50 per cent. higher than the same article could be purchased from a retailer; and he is not conscience stricken either, for what matters a little opportunity like that "as between friends," especially as there is in it worldly gain, even if loss of a soul or part of one. Now, Mr. Editor, after reading these lines, and between the lines, you do not find the definition requested, or something tantamount to it, if you will call at my office any evening between seven and eleven o'clock I will still further exploit verbally my ignorance of the term and my inaptitude as a definer. But in closing, let me say that the Hardware jobbers of this, our beloved country, however technically or professionally defined, are the best men in the world, in their social, business and public spheres—diligent merchants, good citizens and good fellows, and here's to them; may they long live and prosper!

T. James Fernley: A jobbing house is one located at a central distributing point, carrying an ample stock of goods to supply the wants of the trade solicited, and distributing these goods to the retail dealers through the medium of a corps of traveling salesmen statedly employed.

Edward C. Van Glahn, White, Van Glahn & Co.: A Hardware jobber is a middleman who purchases goods in large quantities, and resells them to small dealers exclusively. For the past few years there has been such a rapid tendency,

Digitized by Google

among manufacturers as well as so-called jobbers, toward retail trade, that the "jobber" in New York is now more properly designated a "wholesale and retail dealer."

V. P. Humason, Humason & Beckley Mfg. Co.: A Hardware jobber is a merchant who makes a business of selling Hardware to the trade.

John J. Tower, Tower & Lyon: Retailer: Sells for individual use or consumption. Jobber: Sells to retail dealers, or corporate consumers who carry a stock of supplies. Wholesaler: Sells in unbroken original packages—*Exclusive* Wholesaler, an undiscovered factor in the general Hardware business.

H. T. Patterson, Patterson, Gottfried & Hunter: A Hardware jobber is a dealer in Hardware who sells to other dealers.

Webster R. Walkley, Peck, Stow & Wilcox Co.: In answering your question "Who is a jobber?" I should say—without consulting a dictionary: A jobber is a merchant who buys goods to sell to other sellers. If one sells merchandise of any kind to consumers, he's a retail merchant. If one sells only to parties who buy to sell again, he is a jobber as I understand the meaning of the word.

C. E. Jennings, C. E. Jennings & Co.: In reply to your question "What is a Hardware jobber?" I would say that as some of the largest jobbers, *retail*, and some of the largest retailers, *job* goods, there is no rule which can determine who is a Hardware jobber, except the quantity of goods purchased from the manufacturer.

Joseph Gales, Schoverling, Daly & Gales: The answer to your question seems a self-evident one. I should say that the Hardware jobber is the manufacturer's right hand; the one who makes it easy for the manufacturer to distribute his goods, combining the product of twenty factories in one shipment, buying by the great gross and selling by the dozen.

William Quincy Wales, Brown & Wales: A Hardware jobber in my judgement, is one who carries a stock well assorted, buys in quantity lots or packages, employs a staff of salesmen to cover properly the territory which he intends to handle, and is located in a large city; who does not retail.

Henry Hopkins, associate editor *Hardware:* What is a jobber! Is it possible that any veteran in the Hardware business cannot answer that question off hand? Well I should guess so! A jobber is the retailer's right bower, strengthening his ability to do a safe, shrewd and successful business. A jobber is the good Samaritan, who sends word when advances are likely to take place, and books requirements that run six months, and always at old prices—or very near them. To know a jobber thoroughly, is to know the easy methods of buying without fear or trepidation, and selling at a profit without loss of interest on too much dead stock. The wise jobber—and the woods are full of them—never tries to overstock his customer, he's much more desirous of having him pay up promptly and order another supply. In fact, the jobber is the retailer's backer, counsellor, friend and adviser. He is also the best outlet for the intelligent distribution, in an orderly and economical manner, of the product of the ambitious and progressive manufacturer, who can thus without expense, collect from one source the accumulated results of a number of transactions, too small to merit attention from the producer.

R. H. Swayze, Plume & Atwood Mfg. Co.: One who buys goods in original packages from factories and importers, and distributes them to dealers in smaller quantities.

William C. Biddle, Biddle Purchasing Co.: It would be hard to answer your question in literally a dozen words, but a concise definition would be: A Hardware "jobber" is a dealer who has salesmen "on the road," through whom he solicits and sells to smaller dealers only, who in turn sell to the consumer.

F. B. Earle, National Saw Co.: Hardware jobber: One who sells exclusively to the retail trade.

Griff D. Palmer, Weaver, Palmer & Richmond: A Hardware jobber is a great convenience to the large retail Hardware dealer, and an absolute necessity to the small retail Hardware dealer.

J. A. H. Dressel, Union Metallic Cartridge Co.: A Hardware jobber is one who buys and carries a stock, selling to distributors only.

D. C. Delamater, Freeman, Delamater & Co: One who sells to the retail merchants exclusively, and acts as a distributor for all the different manufacturers, and brings their products together into one stock; thereby enabling the retailer to draw from and replenish his stock from one source, of the multitude of articles known to the Hardware trade. One who for these reasons is a necessity to the manufacturer and a convenience and source of economy to the retailer.

Henry G. Atha, Atha Tool Co: Any one who buys Hammers from the Atha Tool Co.

Clarence I. Markham, Cleveland Twist Drill Co.: A merchant who deals in Hardware by wholesale, or in job lots, for his customers, merchants who re-sell the goods.

J. H. Fall, Jr., J. H. Fall & Co.: A Tin Soldier, in a losing battle.

"Protector" Padlocks.

On page 135 of this issue will be found a series of illustrations, showing the difficulties which are encountered by an enterprising colored gentleman, who has sallied forth in the light of the moon, for the purpose of recuperating his attenuated larder. The manner in which he has run up against a "Protector" padlock, and the evident chagrin which overcomes him on discovering that the hen-roost which he has attacked is invulnerable, suggests the fact

that the word "Protector," used in this sense, signifies protection indeed. His success with an imitation of the "Protector," is also shown forth in a graphic manner.

We show in this connection a sample of the "Protector" lock, the details of which will be found in the advertisement referred to. These goods are manufactured by the Miller Lock Co., Philadelphia, and all that are genuine are stamped "Protector" and have the Miller Lock Co's name on their keys and locks These are made in steel, dark finish; brass with bronzed shackle of malleable iron; and steel shell, bronzed shackle of malleable iron. These goods are for sale by the jobbing trade everywhere.

The Hardware Trade and the Bicycle.

Editor Hardware: While, perhaps, the time has not yet arrived for a new Gibbon to write of the "Rise and Fall of the Bicycle," still, we have now reached a point where it is possible to survey the business in its growth from infancy to full manhood, and to a point now reached, where fadding has ceased, and the call has simmered down to that which is legitimate and, perhaps, more or less permanent.

It is a peculiarity of modern business that it is done in a meteoric fashion. A new article of invention—entirely undreamed of in the past—suddenly, comes on the market, and instantly idle capital, attracted by the possibilities of the future, seizes the infant and quickly develops it to a fullness resembling that of the photographs of children who are using patent baby foods.

This has been true of the wire nail industry (which is of comparatively recent growth in this country); the telephone and electric railroad business, and a most striking example is to be found in the bicycle.

When this foundling appeared on the doorstep of the business public, some six or seven years ago, business men, for a while, looked askance at the stranger and asked "Who would take it in?" For some time the baby was not welcomed, but, suddenly, all lines of business seemed to wake to the fact that here was a promising youngster who only needed adoption in order to develop into an infant prodigy, and, almost instantly, every line of business opened its arms to take the stranger in. Never, perhaps, have so many separate and distinct lines fought for the privilege of nursing a stranger.

First, there were not wanting bicycle enthusiasts that insisted the bicycle made a business of its own, and who scorned the idea of letting the bicycle play second fiddle, or take a subordinate part in any other line. This view, however was scoffed at by many, and, for a while, bicycles could be found displayed in sewing machine stores, grocery stores, dry goods stores, Hardware stores, notion stores, stationers' windows, and even cigar stores, drug stores and undertakers' shops, while livery stables also took them up in lieu of horses.

As might be expected, such a state of affairs could not last forever, and the bicycle was sure to find at last a home in some one line of business.

For our part, we have always been convinced that the bicycle, of itself, could not furnish the necessary amount of business to enable it to stand alone in the town of medium size. The bicycle is a seasonable article, and is not sold steadily the year round, and makes a very precarious living for anyone who has only this to depend upon.

In large cities, it may be possible for a bicycle dealer to exist, but the outlook for him in a small place certainly does not promise he will realize boundless dreams of wealth.

Such being the case, the bicycle must find a home in some one line of business. Where does it belong? Certainly the compounder of pills and potions seems out of place in selling bicycles, and is more at home in selling ipecac or perfumery powder; while the man behind the counter who is measuring out ribbons and muslins by the yard seems equally at sea in selling wheels. Tobacco and groceries are out of the question; while it certainly seems incongruous that a body should be followed to the grave by a company of mourners mounted on bicycles, so, to our mind, it has been perfectly clear that there is only one dealer that can handle the bicycle to advantage—and that is the Hardwareman.

Everyone knows that in a small town the Hardwareman is supposed to be the general tinker of the place, and to him, naturally, drifts the repair of lawn mowers and locks, the fitting of keys, repair of sewing machines and small mechanical work generally. Who, then, is better fitted to handle and repair bicycles than the Hardwareman? And, acting upon this conviction, we have felt no hesitation in offering bicycles to our Hardware trade, with results that have far exceeded our expectations.

It is now generally recognized that the Hardware dealer has the best right to the bicycle trade, and it should constitute part of his business, and there seems to be no question that if the business has come to stay, it will stay in the hands of the Hardwareman.

Now as for the experience gained by the Hardwareman in this line! As we all know, the business, at first, was developed in rather a reckless fashion. Bicycles were sold on very small payments and equally long credits, with a result that dealers who sold them in this way, have in a number of cases, become discouraged with the results and retired from the field. This, however, is not the case with the dealer who has sold them, as he sells other lines of goods, in a prudent and careful way.

While, of course, each dealer must judge for himself as to the desirability of handling bicycles, there are many Hardwaremen who have come to regard it as a legitimate part of their business, and who are satisfied to handle it, feeling there is to be a steady and normal demand for the useful steed.

We quote from one of our customers, as follows:

"Our experience is, that trade take to the Hardware stores for bicycles as they would for a corkscrew or a keg of nails. Having a large tool trade, we find this trade large buyers of bicycles."

We think this sums up the situation, and that the conviction which we have always entertained has been justified by the results, and, to our mind, it is more clear than ever that the bicycle belongs to the Hardware trade, and that, if it is going to stay anywhere, it will stay right there "until the cows come home."

James H. Ritter,
Biddle Hardware Co.

Philadelphia, Pa., April, 1899.

Hardware Club Committees.

President George H. Sargent has appointed the following committees of the Hardware Club of New York, to serve during the ensuing year:

Admissions: Alfred D. Clinch, chairman; Robert H. Swayze, Edward C. Van Glahn, Richard R. Williams and Robert Sickles.

Finance: Webster R. Walkley, chairman; George J. Laighton and Mortimer C. Ogden.

House: Eugene Bissell, chirman; James D. Foot, Arthur G. Sherman, Edward C. Van Glahn and J. Leonard Varick.

Library: Richard R. Williams, chairman; Thomas F. Keating and James H. Kennedy.

"Office Hours."

The Troy Nickel Works, Albany, N. Y., have prepared a handsome card headed, "Office Hours," which their patrons will certainly hang up in the most conspicuous places over their desks, as the same gives an outline of the labors of the day, showing that all classes of callers are welcome. This outline is as follows:

Collectors of Church Subscriptions, -	9 to 10, A. M.
Book Canvassers, Agents, Etc., -	10 to 11, A. M.
People with Funny Stories, - -	11 to 12, A. M.
Ladies with Tickets For Sale, -	12 to 4, P. M.
People with Inventions For Sale, -	4 to 5 P. M.

The rest of the afternoon we devote to miscellaneous calls.

We attend to our own business at night, and have the Troy Nickel Works, Albany, N. Y., attend to our wants in the stove Hardware line, for "Alaska" is "Always Cold."

J. Seymour Andrews, the grocer, has the following placard conspicuously displayed in his store: "A Mistake. All men are not made of dust. Dust always settles. Some men never settle."—*New England Grocer.*

OLD NEW YORK JOBBING DAYS.

There is little if any comparison which can be made between the jobber of these *fin de siecle* days and the dignified, money-making magnate who dominated the business forty or fifty years ago. The traffic in its conditions, its theories, its environments, even in its ratio of recompense for labor performed, presents to-day features of such vast importance which the jobber in the earlier period, even though a dreamer, could have had scarcely a conception.

The extensive establishments which are objects of attraction in all our leading cities, with immense warehouses, and army of employees, afford enormous facilities for the transaction of an overwhelming amount of business, springing from the efforts on the road of a force of traveling representatives that may number anywhere from fifty to five times as many.

Associated with this must be remembered the advisory council, the heads of departments, separate branches of a stupendous whole, either one of which frequently surpasses in amount of sales anything on record of those old firms who made Hardware history in the days gone by.

Then again reflect upon the wide diversity of stock and the countless and never-ending variety to fill even the simplest requirement of this well organized plant. The responsible and brainy men who supervise and control the various departments of a business, the transactions of which run into millions of dollars a year in sales, were undreamed of by our predecessors, and except as members of the firms they represented, could have had no such opportunities for self-advancement.

As the aggregate amount of business done by individual houses was limited in amount, salaries were rarely of extravagant figures, and profits were greater in proportion to gross sales than could be expected in these hustling days of greater competition, enlightened buyers and cash resources.

The foundation of the present highly prosperous state of the industry with its far-reaching importance, may be rightly attributed to advertising; not necessarily newspaper advertising, which the use of that term invariably suggests, but the exploiting made possible by the wide distribution of printed matter, and in connection with intelligent traveling representatives who are armed each with a catalogue which through the evolution of the past two decades has become a veritable cyclopedia of massive form and weight, and natural and indispensable to but a single industry, and possible to no other branch of the world's business because no other trade possesses the minutiæ of expression, the wealth of illustration, that make necessary the perfect enlightenment of the prospective buyer.

This is characteristic of this all-pervading industry alone, because it has its representative, though small in degree, in every hamlet in the land where primitive wants are generated and a mechanic's savings and honest integrity are permitted to lay a foundation on which may be built the more ambitious business of the certain future.

There is a big difference in personality in the jobber of the present day and the jobber of 1860. The decade between 1850 and 1860 was one in which for the advancement of business interests between the jobber and the retailer, credit for one thing was a prime essential and had to be gilt-edged with an underlying character for honor, probity and fair dealing. It was important that the man to whom was extended a line of credit, often of many thousands of dollars, should come well recommended. Cash didn't cut so much of a figure in the formation of business capacity and mercantile ability. The jobber was seldom satisfied with his knowledge of a customer without personal contact, and this instinctive feeling of safety which followed a study of character permeated the relations existing between the wholesaler and the retailer; we knew our customers, made friends as well as customers of them, and felt jealous of any one else being admitted more closely to his aims and confidences than ourselves.

This was characteristic of the heads of manufacturing houses also; they used to go around among the jobbers, getting thoroughly acquainted with them; noticing if their line of goods was properly sampled, keeping tab on the stock—the freedom of the house in a friendly way being extended to them—and also noticing if their competitors goods were to any extent displacing their own, and if so, conjecturing the possible reason.

In the old days the jobber himself was a hard worker, alive to all the details of a large and active business; know-

HENRY HOPKINS.

ing every one of his score of assistants intimately by association, he corrected small errors into important virtues, and felt drawn more and more toward closer business relations with his employees, that made many a boy do a man's work for nominal pay. This close attention to the business, the employers themselves being frequently the best salesmen, caused a zealous application almost night and day for two seasons of three months each, into which the heavy business was at that time compressed; the intervening months being days of relaxation and inactivity, in which vacations in the summer and inventory in the winter were furnished ample opportunity. Heavy orders were given, considering the volume of business; and large stocks were carried to which the sales were enabled to be confined. The manufacturer, then, didn't keep large warehouses filled with goods made up in anticipation of possible requirements; he expected wants would be anticipated when the goods would be made up to meet; rush orders by telegraph being a thing almost unknown, and for the manufacturer to carry the stock, as of late has been the custom, was to be more honored in the breach than in the observance thereof.

But this period in the history of the business was before the American manufacturer had emerged from his swaddling clothes and created a business activity of his own. By far, the larger portion of the goods carried in stock by the New York jobber, came from abroad, and in too many cases had to be ordered four, five or six months ahead, and shipped to port of entry by sailing vessel. These goods, upon arriving and passing through the Custom House,

Digitized by Google

would invariably make it necessary to stay nights, for which the house provided supper money. Then the casks and cases would be opened, the goods sampled and marked, and frequently formed part of the sales on the day following.

It was the custom for early buyers to frequent the marts of the city, making fame and fortune for many hotels well enough known in those days, but to-day existing only in feeble memory. They would make their rounds through the various houses with which they were acquainted, usually making headquarters in one of them, in which the larger amount of their purchases would be made, from personal selection of everything; shipping directions being given, prompt shipment enjoined, and then frequently went on to Boston, where certain goods were usually obtainable at a lower rate of profit; and once in a while would take a trip to Philadelphia, which then had a reputation for jobbing some things at lower prices than other points, a reputation which it is authoritatively stated it still enjoys

Previous to the rebellion, goods were purchased from the makers either here or abroad on six months time or more, with a discount of 5 per cent. for cash in 30 days. Credit being universal, once it was established, business could be extended indefinitely. I have known in my own experience, where a manufacturer of table cutlery in Sheffield in the early days of American competition on same lines, said, he had rather "renew my bill (note) for another six months than have it paid, for seven per cent." (then the legal interest) "was a larger profit on the money than on the same amount of goods." The jobbers sold their goods on same time—sometimes, "and repeat,"—with the exception of a few things on which profit was almost an unknown quantity. This included cut nails and shot, and when we could work it in, Manila rope. These items were usually settled for in cash, before dealer left town; or certainly upon arriving at his destination.

The advent of the rebellion which ruined so many jobbing houses in the South and many Northern ones having southern connections, had the effect of making cash purchases by the retailers the standard of all transactions. Cash quotations then became the vogue, and thirty days the limit of time either asked for or given. The credit and standing of a firm was not considered of so much importance when cash prices were demanded and cash payments exacted.

Advancing prices daily and weekly, and a freedom from the usual and ordinary losses inseparable from a credit business, soon made big profits for such jobbers as were able to stay in the business. I can remember as an illustration that in 1864, on a business not exceeding in volume $180,000 for the year, my immediate predecessors, on the corner of Greenwich and Dey Streets, cleared $32,000.

And in 1865, my first year as principal in the same store, our sales increased to $210,000, and our net profits were in excess of $36,000, being 17¼ per cent. on gross sales. Many a single department in some of the larger jobbing establishments of the present day, can show sales as large, but the profits are in an inverse ratio although some of them—have hopes.

The goods sold in these early days were nearly all standard and regular every-day styles; stocks having no such wide range as is now made necessary in the character of their make up.

A puzzling variety of finishes on builders' Hardware for instance was a thing unknown. None of the encyclopedic catalogues already referred to were then in existence. Plain japanned, so-called coppered, or copper bronzed, forming the principal variation; occasionally some wrought goods would receive a tumbled finish, and there would for special trade be galvanized, or tinned goods also, but the vast variety of finishes now occupying with their artistic differences the cells of gray matter of a Hardwareman's head, had not as yet emerged even from dreamland.

A great many of the goods comprising a stock of Hardware in the days to which I refer, from one end of the store to the other, were sampled on the front of the bundles or packages in which they came originally. The luxury of having square boxes for the proper packing of cutlery and shelf Hardware, was still hidden in the surprises of the future; coming in later when American made goods pushed to the front and began to assume more prominence in our stock in trade.

There were scattered around on the blank walls sample cards set in frames with turn buckles—which permitted an easy removal for changing—and these boards would be handsomely lettered by some of the junior clerks with a knack for that kind of work, and the japanned and similar goods were shown by their aid. Brass goods in many lines in the fancy part of the Hardware products were then largely noticeable. Bronze metal goods as recognized to-day, being yet to come, to show by their artistic excellence the unexampled growth of a branch of our business in which we lead the world. Table cutlery, pocket cutlery, razors, shears, scissors, carvers, etc., were sampled upon the front of the irregularly angled packages filling the shelves. When the sale of any particular pattern cleared it out of stock that was the end of that design until the next season's importations brought in an increased supply.

As they do it to-day the multifarious details connected with selling a large bill of Hardware would have made some of the old-timers fit subjects for a lunatic asylum; with builders' Hardware to be drawn off from architects' working drawings and builders specifications; with the same line of goods having 100 different finishes and of as many patterns and varieties; complicated systems of numbering, further individualized or grouped by the addition of a letter in front, any deviation from which in putting down or getting out, would throw the whole order out of gear, all these things would make an old time Hardware clerk feel like throwing off "the white man's burden" and using some of it for "dope."

I was advised when I entered the jobbing Hardware business as a boy forty years ago of the advisability of its selection because there was so much to learn that it presented all the advantages of learning a trade; how much more truly is this the case to-day when the diversity is twenty times greater. Completely experienced Hardwaremen, conversant with every branch of the business, are not so plentiful as one would imagine; each young man in a big store to-day with an immense catalogue that tells him everything, may know his own department thoroughly, but the rest of the vast establishment is likely enough a *terra incognita* as far as he is concerned. The older employees who have been pushed through every branch of the business are the only ones upon whom the heads of the store place implicit reliance. That was the way the old time houses operated in order to teach the business and create experienced assistants; every one of them had to know the working of each department in the largest estabment, from the entering of goods to the preparation of data for the transmission of foreign orders.

Henry Hopkins,
New York, April, 1899. Associate Editor *Hardware*.

"A pathetic incident of the cold weather," says the Atlanta *Constitution*, "is the case of a bare-foot little fellow who walked into a shoe store, planked down $1 and said:

"'I wants a pair o' shoes fer that.'

"'What number?' asked the clerk.

"'I dunno what number,' was the answer. 'I ain't never wore no shoes since I kin remember. You'll have to measure me!'"

Miller, Sloss & Scott's Large Fire.

The wholesale Hardware house of Miller, Sloss & Scott, San Francisco, Cal., was destroyed by fire on March 31st, the total loss being estimated at about $400,000. The firm occupied a four-story and basement brick building, Nos. 18-22 Fremont Street, near Market, and was known to carry one of the largest and most complete stocks of Hardware on the Pacific Coast, valued at a half million dollars, and was insured for nearly $300,000. The building was owned by W. S. Foy and was worth $50,000. It was almost a total loss and will have to be entirely rebuilt before being again occupied. The origin of the fire is unknown. When discovered, it was confined apparently to the upper floor, but within a short time the whole building was enveloped in flames. Almost the entire fire department of the city was called to the scene, and by ceaseless effort, were enabled to confine the extent of the conflagration to the structure in which it started. The firm carried a large stock of fixed ammunition, and the constant explosions taking place as the fire progressed made the courageous exertions of the firemen attended with considerable danger. Fortunately, no one was injured. As the building was located in the centre of the wholesale district, for a time there was great alarm felt lest the flames should spread to other establishments in the neighborhood; but there were fortunately, no high winds, and this aided the efforts of the fire department, which, after three hours' work, succeeded in subduing the fire.

It is said the structure was inadequate to hold the firm's increasing business, and about two weeks previous, the corporation had already paid $100,000 for a valuable piece of property, now occupied by the Mechanics' Mill, at the southwest corner of Mission and Fremont Streets, and contemplated erecting at once a large building suitable for their purposes.

Within twenty-four hours of the destruction of their own stock, negotiations were entered into and settled upon, by which they became the proprietors of the entire business of the Hawley Bros. Hardware Co., who, by making this change, retire from the business, and consequently remove an active competitor, while protecting the interests of the customers of this old house by leaving them in such good hands as this enterprising firm. The smoke of the ruins was still in evidence, when the front of the Hawley Bros. Hardware Co.'s establishment was ornamented by the signs of Miller, Sloss & Scott, and the usual delay attending so extensive a fireand recovery from its effects, was unknown. business progressing without any interruption of consequence.

The Smith & Hemenway Co.

The Smith & Hemenway Co. having purchased the entire Hardware business of the Maltby-Henley Company and the Bindley Automatic Wrench Co., will hereafter manufacture their specialties at the factory of the Utica Drop Forge Co., Utica, N. Y., owning an interest as they do, in that important factory. On account of the acquisition of the above companies, it became necessary to seek more extensive quarters in New York City; and on May 1st they will move from their old location at No. 20 Warren Street, to the more desirable location No. 296 Broadway.

New England Hardware Dealers' Association.

The regular monthly meeting of the above association will be held on the evening of April 12th, at the United States Hotel, Boston.

The subjects for discussion are those which were partially disposed of at the March meeting, viz:

"Is it advisable to continue as a social organization? If not, what can you suggest to make it a business organization?"

"The advisability of the formation of Local Associations in all towns and cities throughout New England as auxiliaries to the parent Association."

The hour has been changed from 5:30 P. M. to 4:30 P. M. This will allow one hour more for business and will obviate the necessity of out-of-town members leaving to catch their trains before the meeting is adjourned; as has been the case formerly.

Making of Baby Scales.

The making of infant scales is said to be a growing industry. An infant scale of a new design is finished in white enamel. The plate upon which the weights are placed is of iron polished until it looks like a steel miror. At the other end of the balance, where the pan would ordinarily be, is the basket, fashioned with a view to the convenient and comfortable holding of a child. The basket also is enamelled. The base of the scale projects in front to afford a place for the weights, which are of polished iron, the larger ones being provided with handles. The fractional weights are taken by means of a sliding weight on a beam attached to the front of the scale.—*New York Tribune.*

Eating and Drinking.

An average man requires fifty-nine ounces of food per diem. He needs thirty-seven ounces of water for drinking, and in breathing he absorbs thirty ounces of oxygen. He eats as much water as he drinks, so much of that fluid being contained in various foods. In order to supply fuel for running the body machine and to make up for waste tissue he ought to swallow daily the equivalent of twenty ounces of bread, three ounces of potatoes, one ounce of butter and one quart of water. The body is mostly water. The body of a man weighing 154 pounds contains ninety-six pounds, or forty-six quarts of water.—*Exchange.*

When the Relief Committee was organized recently in Atlanta an old negro sent the following letter to a man who had formerly employed him: "Marse Bill; Deer Fren: I is tol' dat dey gwine 'roun' striblitin' goods ter de po'. Marse Bill, you well knows dat I de po'es' nigger dis side er Freedom. So fur, so good. Now, I wants you ter use you 'fluence ter git me some what dey distriblitin'. I wants one bar'l er self risin' flour; two hams, en a side er meat; one bar'l er pearl grits (git de right bran', Marse Bill!); two gallons er maple surrup; one sack er salt; six poun's er coffee; a dollar's wuth er sugar, en, Marse Bill,—ef hit don't go 'g'in dey conscience—erbout a quart er co'n licker, so's de ol' man kin git his dram!"—*New York Tribune.*

The Russell & Erwin Mfg. Co., New Britain, Conn. and No. 43 Chambers Street, New York., announce the publication of their new and complete catalogue, which forms volume IX of the series, and is dated 1899. It comprises a large volume of over a thousand pages, handsomely and firmly bound in dark red cloth with olive edges and ornamental gold stampings upon the side. We are unable to give the space to a more extended notice in this issue of *Hardware*, but promise to refer more particularly to its well arranged contents at an early date.

The word "trust" as applied to recent industrial combinations like that of the saddle makers, is a misnomer, and grows out of the fact that in the early efforts at combination the different interests were conveyed to a "trustee." This trustee issued certificates for the shares which each member of such a combination owned in that combination, and these certificates were commonly called "trust certificates," hence the name "trust" now in common use.—*Ex.*

HARDWARE'S "Prices Current" are reliable.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Azusa, Cal.—The C. C. Casey Co., Hardware, etc., has been incorporated. Capital stock, $10,000; subscribed $6600; C. C. Casey, H. Fabrick, E. K. Peirce, Mrs. C. A. Casey, Mrs. A. M. Peirce.

Bode, Ia.—The new Hardware store of Peter Williams & Sons is now ready for business.

Boston, Mass.—The Miles F. Brennan Co. has been incorporated to deal in iron, Hardware and vehicles. Capital stock, $20,000. Incorporators: Miles F. Brennan, Thomas J. Roche, T. J. A. Johnson.

Buffalo, N. Y.—The A. A. Grinnell Co. has been incorporated by A. A. Grinnell, Albert R. Avery, and Chas C. Avery; Hardware, etc. Capital stock, $25.000.

Copemish, Mich.—Jim McGuire has purchased the Copemish opera house, and has opened a Hardware store in same.

Davenport, Ia.—A new Hardware company has filed articles of incorporation. Its capital stock is to be authorized at $40,000, $20,000 to be subscribed before the concern commences business. Shares, $100 each. The style of the institution is Rascher, Schricker & Rascher Hardware Co., with Frank Rascher as president, Carl O. Rascher, vice-president, and Richard L. Schricker as secretary and treasurer.

Dayton, Tenn.—W. C Godsey, of Meigs County, will open a new Hardware store in the building now occupied by T. H. Brown.

Hornellsville, N. Y.—Chauncey D. Shults and Allen V. Burdett have formed a copartnership and opened a Hardware store on Seneca Street in the building recently occupied by E. J. Davis.

Lafayette, Ind.—The Campbell, Moore, Westfall Co. has been incorporated by Robert L. Campbell, A. B. Moore, and Wm. M. Westfall; Hardware and farming machinery. Capital stock, $10,000.

Lorain, O.—The Lorain Hardware Co. has been incorporated with $10,000 capital stock to deal in Hardware, stoves, tinware, etc. William Helwager, J. A. Kreintz, George F. Haseroelt, Fred P. Dorthler, jr., and George Wieland are the incorporators.

Louisville, Ky.—D. W. Rider, of Elizabethtown, will open a Hardware store in the new building now occupied by Mr. Walker as a grocery, next door to the Joplin Implement Co.

Massillon, O.—The Gow Hardware Co. have taken charge of their new quarters in the Winold block.

Montreal, Can.—T. G. Lewis & Co., Hardware, new firm, have commenced business.

New Berlin, N. Y.—H. L. White and S. B. Pope have formed a partnership under the firm name of White & Pope, and will carry on a general Hardware business.

New Haven, Conn.—George H. Baker of No. 956 State Street has opened a new store, located between Edwards and Bishop Streets, devoted to the sale of Hardware, paints, oils, window glass and house furnishings.

Springfield, Mass.—John W. Hartwell's new Hardware store has been opened in the Columbian block.

Changes and Improvements.

Adams Center, N. Y.—The general store and Hardware business which has been conducted by Bunce & Dean the past five years, has changed its firm name, as Mr. Dean has sold out his interests to Alta Sanford, of North Adams.

Auburn, N. Y.—The firm of Everts Brothers, Hardware dealers, is now Everts Brothers & Pomeroy. Theodore M. Pomeroy, of this city, having been recently admitted into partnership.

Bangor, Me.—William A. Mason, who recently bought out the Hardware store of George A. Bailey, has accepted a partner in the person of William H. Hall, Jr., of this city and the business will now be conducted under the firm name of Mason & Hall.

Clearfield, Pa.—The old firm of Powell Bros. & Powell has dissolved partnership; J. F. Powell retiring.

Edgar, Neb.—Frank Thompson has taken his brother into partnership with him and the firm name is F. M. Thompson & Co. They will deal in Hardware and farm implements.

Fulton, N. Y.—Jesse R. Wright has disposed of the remainder of the Hardware of the J. J. Wright stock to A. J. Snow.

Huntington, N. Y.—Mrs. James Cheshire is building an addition to the rear of her building, used by A. P. Dodge as a Hardware store. Mr. Dodge requires more room for his increasing business.

Gouverneur, N. Y.—A change has taken place in the Gouverneur Hardware Co. by the retirement of Geo. Parlow from the firm.

Marathon, N. Y.—J. O. Peebles, of this place, and his son Clark of Tully have purchased the Hardware store which has been conducted by R. D. Mack.

Ottumwa, Iowa. — Harper & McIntire have purchased the wholesale and retail Hardware business of W. F. McCarroll & Son.

Palestine, Ill.—Bussard & Fife, Hardware, succeeded by David Fife.

Savannah, Mo.—The Stuart & Clasbey Hardware firm have dissolved partnership, Mr. Stuart retiring from business.

Saybrook, Ill.—George C. Gray, Hardware, succeeded by C R. Lott.

Table Rock, Neb.—W. S Lindsley has sold his interest in the Hardware firm of Tillotson & Lindsley, to Anthony Kovandah, and the style of the new firm will be Tillotson & Kovandah. The new firm has already taken possession.

Walton, N.Y.—R. G. MacGibbon has sold his Hardware business to S. G. Alcott, of Hornellsville, and A. B. Shank, of Johnstown, who will continue the business at the same place.

Washburn, Ill.—Mr. Washburn has sold out his Hardware store stock to Mr. Bedding and will move to Milford, Ind.

York, N.Y.—R. D. Guthrie has purchased the Hardware business conducted by George F. Maloney.

Burglaries in Hardware Stores

Arlington, Kans.—Fehr Bros., ammunition.

Atlanta, Ga.—Beck & Gregg Hardware Co., knives.

Beaver Falls, Pa.—W. J. Davidson, revolvers.

Bedford City, Va.—Thomas & Thomas, $100.

Garland, Tex.—M. D. Williams, razors, etc.

Greensboro N. C.—The Odell Hardware Co., store burglarized, and a quantity of goods stolen.

Milledegville, Ga.—Johnston & Bethune, guns.

Ottawa, Can.—McDougall & Cuzner, $100.

San Antonio, Tex.—Chas. Hummel & Son, $150.

Fires in Hardware Stores.

Algoma, Wis.—The Hardware store of C. B. Tift has been destroyed by fire.

Ashby, Minn.—N. O. Melby's Hardware store has been destroyed by fire.

Avon, Ill.—The Hardware store of Merrill & Merrill has been destroyed by fire.

Belton, Tex.—Wilson & Austin Co's Hardware store has been destroyed by fire. Loss, $25,000.

Boston, Mass.—The Hardware store of H. M. Sanders & Co., No. 27 Eliot Street, has been damaged by fire to the extent of $5000.

Chicago, Ill.—Orr & Lockett's Hardware store at No. 50 State Street was slightly damaged by fire a few evenings since.

Grimes, Ia.—The Hardware store of Prunty & Iseminger has been destroyed by fire. Loss, $2000; insurance, $1300.

Irvington, N. J.—The Hardware store of Frederick Stone has been damaged by fire to the extent of $2000.

Louisville, Ky.—G. Dreher & Son's Hardware store located at No. 1029 Third Street, has been destroyed by fire. Loss, $1700.

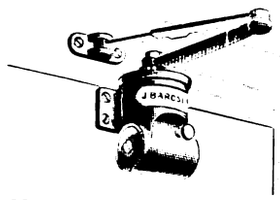
Muncie, Ind.—W. H. Ballard & Co's Hardware establishment has been destroyed by fire. Loss, $3500; fully insured.

Patoka, Ind.—J. H. Hitch's Hardware store has been destroyed by fire.

Sellers, Ala.—The Hardware store of James A. Pool has been destroyed by fire.

Syracuse, N.Y.—Thos. C. Drennan's Hardware stock has been destroyed by fire. Loss $10 000; insurance $8000.

Business Embarrassments.



Montreal, Can.—Amedee Perrier, Hardware merchant, has assigned at the demand of Loranger & Heroux, with liabilities of about $1000.

Watertown, S. D.—L. R. Slawson, Hardware, has made an assignment here to-day. R. L. Eddy is the assignee.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page News of new factories or companies, changes, improvements. etc , will be gladly received, and promptly published.

New Companies, Etc.

Camden, N. J.—The Globe Radiator & Range Co. has been incorporated by William C. Cain, Frank C Cain and Julius H. Anthony; to manufacture steam heaters, stoves, ranges, etc. Capital stock, $100 000.

Chattanooga, Tenn.—The Williams Novelty Works will be established for the manufacture of metal curtain poles patented by Jesse Williams, and other novelties in the metal line.

Chicago, Ill.—The South Chicago Furnace Co. has been incorporated by Thomas M. Butters, Herbert H. Hall and William H. Dayton; manufacturing. Capital stock, $300,000.

Cleveland, Ohio.—The Diamond Bolt & Screw Co. has been incorporated by Isaac Lewis, Robert Lindmueller, D. E. Wright, S. C. Payne and J. W. Stoddart; bolts and screws. Capital stock, $25,000.

Cleveland, Ohio.— The Reliance Gauge Co. has been incorporated by M. F. Bramley, Herman P. Zapp, W. Harris Lucas, Frederick Roberts and others; machinery and tools. Capital stock, $25.000.

Goldsboro, N. C.—The John Slaughter Co. has been incorporated by John Slaughter, Charles Dewey and Charles F. Herring; for the manufacture of Hardware, etc. Capital stock, $40,000.

Hoosick Falls, N. Y.—The Brian Heater Co. has been incorporated by Henry W. Stone, James T. Brian and Theodore B. Brian; heating. ventilating and sanitary apparatus. Capital stock, $50,000.

New Haven, Conn.—A new joint stock company is to be started under the name of the New Haven Cutlery Mfg. Co., and will shortly begin the manufacture of cutlery and Hardware. The new company has been organized with a capital of $3500, with 140 shares at $25 each.

Portland, Me —The National Machine & Tool Co. has been organized for the purpose of the manufacture and sale of machinery, with $50,000 capital stock, of which $400 is paid in. The officers are: President and treasurer, James H. Reed, of Brookline, Mass.

Rome, N. Y.—The Rome Tube Co. has been incorporated by Wm. P. Huntington, W. J. P. Kingsley and J. S. Haselton; manufacturing and dealing in metals. Capital stock, $200,000.

St. Paul, Minn.—The Lang Radial Valve Gear Co. has been incorporated by L. A. Lang, E. F. Walsh and Joseph W. Bethinger; to develop radial valve gear. Capital stock, $25,000.

Trenton, N. J.—Articles of incorporation have been filed for the American Copper Co., with an authorized capital of $600,000. The company is authorized to mine, smelt, manufacture and deal in gold, silver, copper, lead, zinc, brass and other ores. The incorporators are: Frederick B. Hyde, Kenneth K McLaren and Harry W. Moon, of Jersey City.

Woonsocket, R. I.—The City Iron Foundry has been incorporated by Charles E. Thomas and Fred A. Thomas; heating appliances and machinery. Capital stock, $100,000.

Changes and Improvements.

Bridgeport, Conn.—Another building is to be erected by the Union Metallic Cartridge Co. It is to be three stories high and will be located on Barnum Avenue between Seaview Avenue and Pauline Street. The foundation work will begin in a few days. An addition of several stories is also to be constructed to the building across the street from the new structure. The two buildings will be connected by a bridge over the street permission having been granted by the city. The company has well on the way to completion a four-story addition to its buildings on Pauline Street.

Jersey City, N. J.—The Great Western File Co. have sold the property in Beaver Falls, Pa., known as the Great Western File Works, to the Nicholson File Co., of Providence, R. I., for $50 000.

Louisville, Ky.—The Todd Mfg. Co., of New Albany, have purchased the entire machinery plant of Raible, Smith & Co., who recently failed in business.

Monongahela, Pa.—The new stove factory of Graff & Co. is almost completed and will be ready for operation in about ten days. When completed it will be one of the most extensive plants of the kind in the State. The foundry building is 120x260 feet, and the pattern shop is 40x70 feet. The buildings cost $20 000. The cost of the machinery and patterns is nearly $30,000, making the total cost of the plant about $50 000, About 250 men will be employed in the works.

New Haven, Conn.—The Lavigne & Scott Mfg. Co., of No. 15 River Street, has been succeeded in business by the Lavigne Automatic Mfg Co., with an authorized capital of $150,000. Lavigne & Scott have been for years engaged in the manufacture of Hardware, yacht cannons, wrenches and special goods. The reason for the forming of the new company was that the Lavigne & Scott Co.'s business had increased so that they had to form a new company in order to meet the demand for the Lavigne automatic machines. The new company was formed under the statutes of Connecticut, and its officers are: President, Benjamin Eastwood, of Paterson, N. J.; secretary and treasurer, William H. Cole, of New York City; manager, J. P. Lavigne.

Sharon, Pa.—The Sharpsville foundry has been purchased from Receiver James P. Whitlaw, for $2900, by James V. Rose, who will repair plant immediately and put it in operation.

Recent Embarrassments.

Unionville, Conn.— At a meeting of the stockholders of the Upson & Hart Co., manufacturers of cutlery, it was voted to apply to the Superior Court for the appointment of a receiver to wind up the affairs of the corporation. The capital of the company is $75.000. It is the successor of Mecht & Hart, the latter succeeding the firm of Pond & Hart. Last fall the plant was leased to the Upson Nut Co. for a period of nine months, and this lease soon expires.

Recent Fires.

Cleveland, Ohio.—The Cleveland Machine Screw Co., plant damaged by fire at a loss of about $50,000; fully insured.

Cleveland, Ohio.—The Dangler Stove & Mfg. Co., Perkins Avenue near Willson, damaged by fire at a loss of about $30 000; partially insured.

Lancaster, N. Y.—Fire which destroyed the buildings of the Lancaster Machine & Knife Co., involving a loss of $30.000. The plant was located in the extreme end of the village, a long distance away from the hydrants. It was practically impossible, under the circumstances, to make much of a fight against the fire. The loss will be a severe blow to many residents of Lancaster, as it will, for a time, at least, throw them out of work. It is understood the works will be rebuilt.

Milwaukee, Wis.—Fire which started a few days since in the smelting room of the Brand Stove Co.'s plant, destroyed property worth about $1000. None of the patterns were lost or destroyed.

Miscellaneous.

Hartford, Conn.—At the meeting of the board of directors of the Pratt & Whitney Co., the following officers were elected: Amos Whitney, president; Rowland Swift, vice-president; Roswell F. Blodgett, secretary, and J. C. Stirling, treasurer. The office of the second vice-president, lately held by George W. M. Reed, was not filled. The same men who constituted the executive board last year were re-elected. The following are the directors for the coming year: Francis A. Pratt, Amos Whitney, Roswell F. Blodgett, Rowland Swift, William Waldo Hyde, J. R. Refield, George W. M. Reed, Frank C. Sumner, Daniel R. Howe, of Hartford; C. C. Cuyler, A. C. Vaughn and Robert S. Walker, of New York; T. J. Nicholl, of Rochester. Mr. Nicholl, who is the new managing director, takes the place of Gen. H. J. Morse, of New York, on the board.

Rochester, N. Y.—The War Department of the government has paid a great compliment to an extensive industry of this city in selecting it to supply 3000 steel baskets which are needed for use by Admiral Dewey's fleet at Manila. The Metallic Basket Co. was selected from a large number of competitors to do the work. The naval officials were surprised when they received the request from Dewey for the steel baskets. Heretofore it has been customary to use heavy bags. It is thought that Admiral Dewey has adopted the idea of using the steel baskets from seeing them in operation on the foreign ships in Manila harbor.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Beaver Falls, Pa.—H. G. Wassen, of Pittsburg, Pa., will shortly erect a plant in this city for the manufacture of seamless bicycle tubing. It will cost about $175,000.

Chicago, Ill.—The Berger & Larsen Tire Co. has been incorporated. Capital stock, $10,000. Incorporators: John P. Larson, John A. Berger and Bernhard Anderson.

Cleveland, Ohio.—The W. E. Kelly Mfg. Co. has been incorporated by William E. Kelly, Edward B. Weed, Albert H. Weed, Walter D. Meals and Ferdinand L. Black, handle bars. Capital stock, $25,000.

Detroit, Mich.—The Sprocket Chain Mfg. Co. has been incordorated by T. D. Buhl, L. B. Ball and Alex. McPherson; malleable iron castings. Capital stock, $75,000.

Fairbury, Neb. — Howell Bros., Hardware, sporting goods, etc., have opened new store.

Hartland, Minn.— Ackland & Siblerud, Hardware, sporting goods, etc., new firm, have commenced business.

Jersey City, N. J.—The Metallic Rubber Tire Co. has been incorporated by Calvin T. Adams, Robert S. Adams, Clarence L. Barger and Frank M. Burger; tires for bicycles. Capital stock, $100,000.

Montreal, Quebec.—The Canada Hardware Co., Ltd., has been incorporated to deal in Hardware, bicycles, sporting goods, etc. Capital stock, $50,000.

Norfolk, Va.—The Norfolk Novelty Mfg. Co. has been incorporated by B. R. Jones, C. D. Brumley, A. M. Jones, S. D. Scott and Jas. H. Parker; tire tighteners, etc. Capital stock, $5000.

Northampton, Mass.—John W. Hartwell, sporting goods, etc., has opened a wholesale and retail store.

Oregon, Ill.—M. B. Bohner, bicycles, will open new store on North Fourth Street, and a complete line of high grade wheels will be handled, together with all kinds of repairs, etc.

Palmer, Mass.— Wallace Knowlton will shortly open a bicycle repair and sale stere.

St. Marys, W. Va.—The E. T. Martin Hardware Co., Hardware, sporting goods, etc., will open new store about April 15th.

Washington, D.C.—Articles of incorporation of the Automatic Cycle Pump Co. have been filed. The capital stock of the company is stated to be $15,000, and the incorporators are: Samuel J. Ross, George S. Cooper and George O. Ferguson.

Changes and Improvements.

Birmingham, Ala.—The business of the Marvel City Cycle Co has been purchased from J. W. Rarden the former owner, by Henry Brown and George Houston.

Buffalo, N. Y.—W. S. Pitman, manufacturer of bicycles succeeded by the North Buffalo Wheel Co.

Chattanooga, Tenn.—The Nashville Rubber Tire Works Co. will establish a rubber tire factory in Chattanooga.

Chicago, Ill.—The Plew & Motter Mfg. Co. has certified to a change of name to Plew Saddle Co. Change of object of incorporation. to manufacture bicycles. Increase in directory from four to five, and increase in capital stock from $5000 to $25,000.

Florence, Colo.— H. E. Stock, bicycle dealer, succeeded by W. A. Tatum.

Honolulu, H. I.—The Pacific Hardware Ca. have been succeeded by Castle & Cooke, dealers in Hardware, sporting goods, etc.

Hot Springs, Ark.—Joseph Beaulleu, bicycles, reported to have sold interest to S. M. Hunt.

Lebanon, Ind.—James & Wysong, bicycle dealers, succeeded by M. D. Jones.

Lidgerwood, N. D.—Hellier & Clark, bicycles, succeeded by H. J. Clark.

Macon, Ga.—The Southern Hardware Co., Hardware, sporting goods, etc., succeeded by the Merritt Hardware Co.

Minneapolis, Minn.—The Northwestern Cycle Co. have leased the new brick block, No. 121 Sixth Street, S., for the handling of their wholesale business. This enlargement was rendered imperative by their rapidly increasing jobbing business. Their retail business will be conducted as formerly in their old store, corner Sixth Street and First Avenue, S.

New Bedford, Mass.—F. L. Sowle & Co · Hardware, bicycles, etc., business purchased by the Packard Hardware Co.

Oskaloosa, Iowa.—Thomas L. Ira & Co., bicycles, reported to have dissolved partnership.

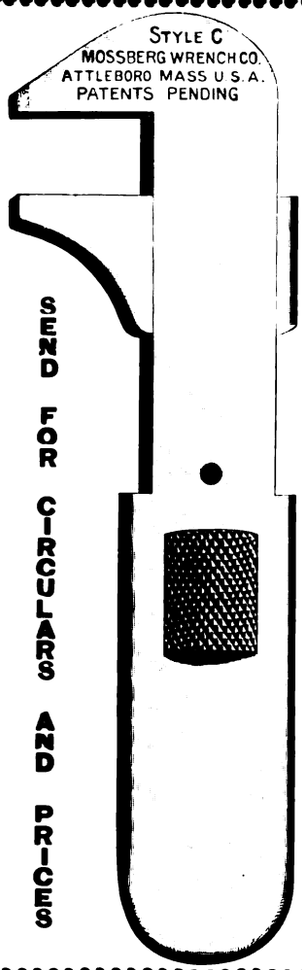
Recent Fires.

Denver, Colo.—The Denver Bicyle Engraving Works, No. 825 Eighteenth Street, slightly damaged by fire.

Lyndonville, Vt.—E. J. Blodgett, bicycle dealer, damaged by fire.

Toledo, Ohio.—Norman De Vaux, bicycles, destroyed by fire.

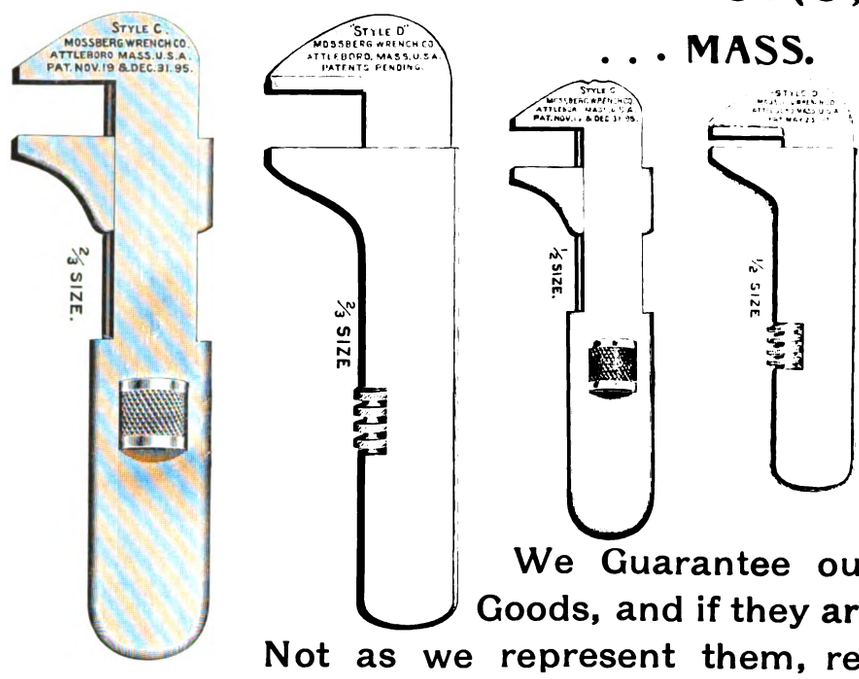
Recent Burglaries.



Hammonton, N. J.—A. L. Patton, bicycles, store burglarized.

The Value of Lightning Rods.

"One of the best evidences of the value of lightning-rods up to date," says the *Scientific American Supplement*, "has been afforded by the Washington Monument. It is capped by a small four-sided pyramid of aluminum, which metal, so cheap to-day, was very costly at the time of the building of the greatest obelisk that the world has ever known. This aluminum tip is connected with the ground by four copper rods which go down deep into the earth. On April 5, 1885, the monument was struck fiercely five time, but it suffered no damage whatever. On June 15 of the same year a more tremendous assault was made upon the monument from the heavens and the result was a fracture of one of the topmost stones. The crack still remains to show what nature can do in the way of an electrical shock, but the slightness of the damage is evidence of man's power to protect himself from such attacks. The obelisk is ideally located for attracting electrical assaults from the skies, and yet, while many times hit, it has suffered only once, and that time to a trifling extent. The Statue of Liberty, New York Harbor, is protected by copper rods united to the figure and extending through the pedestal to copper plates buried in wet ground beneath the foundation. Lightning has never injured the statue in the least."



HARDWARE is printed for men now on earth.

The Blount Door Check

is described in a monthly bulletin of good things issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

The Yale & Towne Mfg. Company.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. **List, per doz., Enameled, $30.00; Full Nickel, $42.00.**

We have received from the Knapp & Spencer Co., Sioux City, Iowa, their supplement to Department C of builders' Hardware, under date of April, 1899. This is a large and handsome volume, containing nearly a hundred pages, in convenient size for office use, and showing designs, with descriptions of their extensive line of builders' Hardware. They say: "In presenting this supplement to the trade, it is our intention that this should be used as a supplement to departmen C, builders' Hardware, of our general catalogue. This supplement includes a number of the very latest designs of house trimmings, and can be furnished in any of the finishes as described on the next page. Goods not listed in this supplement will be found in department C of the general catalogue. This, we believe, will make our list of house trimmings complete and up-to-date in every respect. We are in a position to furnish estimates and price on special contracts for special designs, and we will gladly furnish without delay, prices in any finish of any of the goods listed in this supplement and catalogue. We are also in a position to submit samples for inspection of the entire line."

In the New York Sportsmen's Exposition Rifle Tournament, held in Madison Square Garden, March 2 to 15, 1899, Peters' cartridges established a record for the world. Of the twelve winners in the Championship Match nine of them, including the first eight, shot their goods, and the winner, F. C. Ross, made the great record of 2425, which exceeded by one the World's Record established last year by H. M. Spencer, Esq., who also used their cartridges. In the Continuous Match the first fourteen winners shot their cartridges, and in the .22-Caliber Pistol Match the winner, Dr. Weber, also shot their goods.

Goodell Bros, Co., of Greenfield, Mass., the well-known manufacturers of mechanics' tools, have changed their corporate name to the Goodell-Pratt Co. There is no change in the officers, directors or management, and these well-known works will be conducted as heretofore. F. E. Wells is president of this company and W. M. Pratt treasurer, and their New York office is at No. 94 Reade Street.

The Secretary of State for War has placed the following order for cutlery with Messrs. Atkinson Brothers, Ltd., Milton Works: 120,000 razors and cases, 75,000 sailors' clasp knives, 210,000 table knives, 170,000 table forks, 1200 carving knives, 1000 carving forks.—*Hardware Trade Journal.*

The fourth annual convention of the Texas Hardware Jobbers' Association will be held at Sherman, Tex., on April 25th and 26th.

Digitized by Google

REVIEW OF THE MARKETS.

Hardware: The jobbing fraternity have every reason to feel grateful at the present conditions surrounding the Hardware industry. An opportunity, such as they have enjoyed for several months, in preparing to recoup themselves for the absence of profits of late years, must give them a feeling of content and comfort. The manufacturers have been doing their best to supply the stocks already ordered by the hopeful jobbers, and the flood of spring trade will be in full operation at the first breath of the warm and grateful zephyrs of spring. The jobbers' requirements are becoming less, and until demands upon their own stock indicate if any weak spots exist the factories will find that filling specifications previously received will provide ample employment. Late changes in price are not so numerous as they were a month ago, and the trade has settled down to the belief that a general and uniform advance will pervade the entire market, and that what are called old prices will not be heard from for a long time to come. The only fear in the minds of the manufacturers is, that when new orders are taken, whether the trend of business will sustain the conditions now so noticeable, and that there will be no retrograde movement, slaughtering prospective advantages, and unsettling prices on which the future prosperity is based and predicated. The consumer, in his dealings with the retailer, will do much to increase confidence, in the fact that slight advances in price will not militate to the disadvantage of the retailer, who will thus stimulate the trade with the jobber and make it easier for the manufacturer. As many goods have been purchased at figures too low to be duplicated, it is to be hoped the jobbers will see the advantages they possess and not throw them away. The old feeling of competing with the manufacturer and his quotations, this season cannot come to the front, for the factories are too busy filling the jobbers' orders; and when it becomes a question between themselves, to obtain all the good that should be their portion, it is dictated by common sense that the prevailing fraternity of interests under the influence of the jobbers' asssociations will prove a safety valve, that will make the season's business a grand and prosperous success.

Wire Nails: The quotations on wire nails remain as previously reported in our more recent issue, the business being done at the latest scale of prices, is not especially remarkable, as the larger buyers have already protected themselves in good shape, and many of them have nails coming to them on orders booked as far back as the days when $1.25 was a prevailing quotation. We quote as follows, f.o b. Pittsburg or Cleveland, the prices being graded as indicated: To jobbers handling carload lots, $2; less than carload lots, $2.02½, To retailers, in carload lots, $2.05; less than carload lots, $2.15. New York market is indicated in the following quotations: Carload lots on dock, $2 20; small lots from store, $2.35@$2.40.

Cut Nails: The cut nail market has been greatly improved by the high prices prevailing on wire nails; the tendency being on the upward grade, in a manner very gratifying to the mills, whose concerted action has made it possible. The mills are quoting, f.o.b. Pittsburg: To jobbers in carload lots, $1.75; to jobbers in less than carload lots, $1.80; to retailers in carload lots, $1.80; to retailers in less than carload lots, $1.95. The New York prices may be quoted as follows: Carload lots on dock, $1.95 Small lots from store, $2.10.

Barb Wire: There have been no new changes in the prices of this leading staple, prices remaining as reported in our previous issue, which were as follows, f. o. b. Pittsburg or Cleveland: To jobbers in carload lots, painted, $2.10; galvanized, $2.50; to retailers carload lots, painted, $2.15; galvanized, $2.55; less than carload lots, painted, $2.25; galvanized, $2 65. New York prices, carload lots on dock; four point galvanized, $2.65. Small lots from store $2 75. Painted 40 cents less. The demand at present is only of a nominal character, but the belief is expressed that a lessened demand would possibly prevent the shortage of supply it was feared would be a feature before long.

Smooth Wire: A large demand for Smooth Wire is still being felt by the manufacturers and is likely to continue as large orders have been given which are a long way from being completed. Prices remain as previously quoted, so that the market is now represented by the quotation for plain wire of $1.85 base f. o. b. Cleveland or Pittsburg to largest buyers, single carloads $1.90 for plain and $2.30 for galvanized. Less than carloads, $2, f. o. b. Cleveland or Pittsburg, galvanized $2.40.

Bright Wire Goods: The manufacturers of bright wire goods, have adopted an entirely new list which will appear elsewhere in this issue. While the list prices are very much lower, the new discounts make a net price which is a large advance on the average previous cost. The new list is subject to a discount of 40 and 10 to 50 per cent.

Wood Screws: Under date of March 22d the following new discount sheet was issued by the American Screw Co , Providence, R. I., in which a number of advances occur, and also on rivets manufactured by them. They announce that they have discontinued the manufacture of Coach Screws:

Cash discount, 2 per cent. 10 days. Discounts subject to change without notice. AMERICAN SCREW CO., Providence, R. I., U. S. A.

Auger Bits: The prevailing quotations on this important line of goods has recently been advanced by the leading

Digitized by Google

makers on the ordinary pattern, present quotations being 75 to 75 and 10 per cent. discount from list.

Heavy Sledges and Hammers: The advancing tendencies of the material used in the manufacture of these goods has been so constant it has been found necessary to advance the prices in conformity therewith. The market is now represented by the following, the extreme discount applying to large orders: Heavy Sledges and Hammers 75 and 10 to 80 per cent.; Light Hammers and Masons' Hammers, 75 and 10 to 75, 10 and 5 per cent.

Railroad Picks, Mattocks and Grub Hoes: The market prices on these goods are now represented by the following latest quotations: 70 and 10 to 75 per cent. discount.

Steel and Iron Squares: The irregular prices which for some time have existed on these goods, have finally resulted in a concerted effort to sustain the market by firmer quotations based on the increased cost of raw material. The market is now represented in a regular way, at a discount of 75 and 10 per cent.

Galvanized Iron Pails: The increased value of all raw material has had its effect upon the market prices of these goods. The low prices previously prevailing having been withdrawn, the following are now quoted as representing the present market:

	10 inch.	12 inch.	14 inch.
Water Pails, competition goods, per gross	$17 00	$19.50	$22 00
" " standard goods, per gross	18.00	21 00	24.00
Fire Pails, round bottom, per gross	22.00	25 00	28 00
Well Buckets, per gross	23.00	25 00	27.00

Binder Twine: The present prices on binder twine are as follows:

White Sisal, 500 feet to pound	9½ cents
Standard, 550 feet to pound	9½ "
Manila, 600 feet to pound	10¼ "
Pure Manila, 650 feet to pound	11 "

Prices are for carload lots, f.o.b. Eastern factories. An advance of ¼ cent per pound is charged in less than carload lots.

Cordage: The present prices on manila and sisal rope are represented by the following:

Manila, 7-16 inch and larger	per pound,	9¼ cents
" ⅜ inch.	"	10¼ "
" ¼ and 5-16 inch.	"	10¼ "
Sisal, 7-16 inch and larger.	"	8¼ "
" ⅜ inch..	"	9¼ "
" ¼ and 5-16 inch	"	9¼ "
" Lath Yarn	"	8¼ "

Prices are for carload lots, f.o.b. Eastern factories. For less than carload lots the customary advance of ¼ cent is charged.

Window Screens, Screen Doors, Etc: We have received the following:

Burlington, Vermont, March 25, 1889.

Withdrawal of Quotations: Owing to the great advance in the price of all the materials entering into the manufacture of screens, we are compelled to withdraw all outstanding quotations. We shall be pleased to name our new prices upon application, and request that you send us your inquiries if you have not placed your order for this season.

Yours truly,

Porter Screen M'f'g Co.

Linseed Oil: Under date of March 24th, is quoted as follows: In lots of less than 5 barrels, 48 cents per gallon; in lots of 5 barrels or more, 47 cents per gallon. The 5-barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw: Calcutta oil, 58 cents per gallon. Above prices are subject to change without notice.

THE BALTIMORE TRADE.

American industries having recently assumed mammoth proportions, will find prosperity through their ability to meet the demand both foreign and domestic, which has suddenly burst from all quarters of the globe.

Never before in the world's history has there been such universal clamor for manufactured goods arising from conditions peculiar to progress and civilization. Rapid transit in various forms is superceding older methods of travel, and popular adoption by all nations, creates demand for quantities of material as is particularly noticeable in the volume of goods necessary to build and equip railroads of any magnitude, and the number of mills or factories required to produce the same.

Our natural resources, together with the vast amount of wealth invested in plants which have the best machinery known to modern science, not to mention the ability to ingratiate ourselves into the good graces of the fellow having a contract to let, should place us far in the lead in competition with any nation. Thousands of miles of railroads are now being built, and doubtless many more are under favorable consideration, and as some of our mills have declined contracts for steel rails through inability to complete them on time, being crowded with other orders, it is evident our manufacturers are getting a liberal share of the foreign trade.

To control this trade is the apparent object of consolidation and should be encouraged, but when manufacturers abuse their privileges and upon securing a monopoly in any line, charge our jobbers extortionate rates, thereby increasing the burden of the poor man and particularly the farmer, we should enact such State or National laws as would heap heavy penalties upon the heads of such offenders.

We concede that manufacturers should make liberal profits and pay their laboring men well, but do not want to participate in the patronage that forces the payment of two dollars for one dollar's worth of goods.

Whilst regretting we did not get it we are pleased to congratulate our Philadelphia friends upon securing the shipbuilding plant of which Henry G. Morse is president; although located at Camden, N. J.,—across the river—the benefits derived from the increased population necessary to run this big plant will be practically theirs.

Business continues brisk, and more goods would move were not some of our customers dropping certain items, considering them too high to handle at present, old contracts on poultry netting, barbed and other wires, and a few other things are not being filled as promptly as could be desired, and whilst we appreciate the difficulties experienced by manufacturers in getting cars and material, do not forget to remind them every now and then that we want our specifications rushed forward.

Collections are steady. H. W. Webb & Son.

THE PHILADELPHIA TRADE.

If there is any one word which will describe the situation in the Hardware trade to-day, that word is "confidence." Never, for a score of years have we seen such confidence displayed in the market as is shown to-day, and those who have been skeptical of the advanced prices recently announced, are finding as they view the market, that these prices have come to stay for sometime, at least, and in many cases, the difficulty is to-day to get goods at any prices.

Factories are still so far behind on their orders that very few can be found who will promise prompt shipment, while, in some lines, which lie near the raw material, the market is in such an excited state that manufacturers absolutely refuse to name any price whatever, and are adopting the rule forced on them by the parties from whom they buy their raw material, namely: goods sold only at prices ruling at date of shipment.

In such cases, it can readily be seen that the jobber is in a most unsatisfactory position. Unless he should be so fortunate as to have a very full stock of every line of goods, he cannot know, with any certainty, at what prices he dares to take an order, as quotations which he may have in hand from the manufacturer to-day, may not be good to-morrow, and goods sold at a profit based on to-day's price, may net a loss to the jobber at the time of shipment. Almost every jobber can testify to cases of this kind, and they seem to be getting more numerous as the spring advances.

It goes without saying that advances continue. Almost every line of goods is feeling the impetus, and those which

Digitized by Google

have been quiet so far are now being forced into the field; while second and third advances are also making their appearance.

It is a very reasonable question to ask whether these advances are justified by present conditions, and, in our last letter we endeavored to point out some of the natural causes which have led to these advances.

Many people fail to see any natural causes for an advance and claim it is simply an arbitrary action on the part of the trusts, but even if, for the sake of argument, this last claim is granted, it seems quite evident that, as raw material is firmly controlled by four or five gigantic corporations, which, today, have a complete and masterly grasp of the market, these trusts, having everything to lose by a decline and everything to make by maintaining prices, are not apt to let the market fall off—on the contrary, there is every promise prices will be maintained for some little time.

It is gratifying to report that March shows a decided increase in sales, and, if we are now favored with good spring weather, there is every reason to suppose that trade in April will more than surpass the records of last year.

Collections show an improvement, and the larger amount of money being paid out in wages is probably being felt in the channels of trade. Biddle Hardware Co.

THE DAVENPORT TRADE.

One of the great steel and wire syndicates, consolidations or whatever name the company may be called, now quote their various products at a price f. o. b. the mill from which the goods are to be shipped. "*With the full tariff rate of freight added to point of destination.*" If any of the jobbers have been getting a rebate from the railroads they will now realize that somebody else gets the benefit of this rake off. Wonder how they will enjoy it?

The high prices of iron, steel and Hardware are already having a depressing effect on trade, and deterring the erection of buildings, and other improvements contemplated previous to the recent advances. While sales are still large, and are above normal for this season, the last half of March will not show as large gains as the first half of the corresponding month of a year ago.

The catalogue houses and department stores continue to menace the retail dealers, but we are pleased to note that one of the largest and best known manufacturers whose goods are sold by nearly every legitimate wholesale and retail dealer in Hardware in this or any other civilized country on the globe, has recently decided that no more sales will be made to these houses.

As this is to be your large and elegant Anniversary Number, we wish to use more than the amount of space usually assigned for trade reports, and to give some facts connected with the United States Arsenal here that may interest some of the numerous readers of *Hardware*. For several years past the Rock Island Arsenal has manufactured all the equipments used by the infantry, cavalry and artillery soldier for his field and garrison service, horse equipments, targets and target material, metallic carriages for the field artillery used on the battlefield, and for the heavier 5-inch and 7-inch siege guns with their necessary ammunition wagons, repair wagons and all the varied implements and equipments incident to their service.

Before the recent war with Spain the average force employed at the arsenal was something under 500 men, with a payroll of $30,000.00 per month. Last summer this force was very greatly expanded and the shops were running twenty hours per day, employing nearly 3,000 men, with a payroll aggregating but little under $200,000 per month.

The reduction following the cessation of active hostilities with Spain brought the force down to its present limit of about 1,300, with a monthly payroll of $75,000 to $80,000, and it is likely that the arsenal will continue on this basis for some time to come.

During all this period, and in the immediate future, the manufactures have been limited to the different classes previously mentioned, but Congress in its last session has taken steps which will result in adding in a few years a very important industry to the manufactures of the arsenal.

For many years small arms, that is rifles and carbines principally, have been manufactured for the Army only at Springfield armory, Mass., but it is now contemplated to establish a plant at Rock Island Arsenal also, for doing this work and $350,000 was appropriated last March for taking the initial steps to this end.

The buildings designed for manufacturing purposes at the arsenal consist of ten large stone structures of two stories with capacious attics and basements, giving four floors in which machinery can be installed. These are arranged in two rows of five each, one designated as the Arsenal Row, and the other as the Armory Row. But three of those in the Arsenal Row have yet been fitted up with machinery, that having been sufficient for the manufactures at the arsenal and also all that could be accomplished with the funds available for the purchase of machinery. It is now proposed to commence preparing three of the buildings of the Armory Row for the reception of the necessary machinery for manufacturing the Krag-Jorgensen rifle, the weapon with which the soldier of our army is now equipped.

The sum available will, of course, not suffice for the purchase of the machinery and appliances which would be required to entirely equip these shops, but it will be sufficient to obtain some of all the classes requisite for the manufacture of small arms and it is proposed to so arrange it that if subsequent appropriations become available, additional machinery can be disposed without compelling material alterations in the plan adopted.

To fit up the shops with the necessary shafting and other appliances, to introduce power and to purchase and install the great variety of machinery required for the purpose will undoubtedly demand a long time. Congress recognized this and though the other appropriations in the Money Supply bill in which this was included all expires by limitation on June 30th, 1900, special provision was made making this allotment available until expended.

It is hoped that no more than eighteen months will be required to put the plant in proper condition for beginning work. If Congress should then provide funds for the actual manufacture of small arms to the capacity of the plant that has been installed, it is probable that nearly 1,000 additional employees would be required in the shops at Armory Row in addition to those now engaged in the present manufactures of the arsenal. As this, however, depends entirely upon the judgment of Congress, it is still somewhat within the realm of speculation.

Sickels, Preston & Nutting Co.

THE INDIANAPOLIS TRADE.

The price of pig iron has become an acknowledged barometer of business prosperity and depression. Another barometer of the same subject, with which more jobbers come in contact and can watch more closely, is the number of orders for opening stocks. It has been interesting to notice during the past two months the large increase in the number of such orders we have shipped.

All jobbers take great pleasure in assisting to start in business young men who have served their apprenticeship, devoting years to the mastery of the details of a most intricate business.

In no other country but our own is it possible for a young man by close application, frugality, perseverance and integrity to lay in a few years the foundation for a competency by accumulating a few hundred dollars with which he can purchase an assortment of Hardware and begin business for himself in a small way.

Many who will read this should take courage and go for-

Digitized by Google

ward with this in view. History repeats itself and what has been done by many during this decade can be done by young men who are in earnest and are thorough in all they undertake during the opening years of the new century.

The Hardware trade has a fascination about it which leads many consumers of it to believe that if the young men referred to above have made a success there is no reason why they should not also succeed. Their argument that it is the safest and cleanest of all merchandising has become almost a proverb.

When money begins to seek investments, which is only another definition of "Good Times," then some of those people who have little, if any, knowledge or experience, but have been able to gather together a few hundreds or thousands of dollars, rush into what they consider next to groceries, the easiest business in which an inexperienced person can engage. The result of this rashness has been very apparent during the past three or four years to those connected with the credits of our jobbing houses.

While the fallacy of the idea that the Hardware business is so simple that only a slight experience is necessary to success in it, is best known to those who, after a score or more years' close study, have not been able to master the intricacies of it, the venturers of the past have learned it to their sorrow in about the time it took to use up the capital they invested, together with what they were able to borrow of a few indulgent friends.

The conclusion is evident that to succeed in the Hardware business, and the same is true of the majority of mercantile pursuits, the three essentials are: Ability, Capital, Experience. The person who lacks any one of these is handicapped in the race.

VAN CAMP HARDWARE & IRON CO.

THE CHICAGO TRADE.

While there have not been any radical advances on any one line or one important item during the last few days, at the same time our clerks having in charge the changing of prices, have been more than ordinrrily busy during the past week making numerous changes on the smaller lines of goods, making, among others, moderate advances in the following goods: Spring hinges, wrought goods, halter chains, woodenware, galvanized eave-trough and conductor, rope, hog rings, wringers, bright wire goods (entirely new list and new discount), pieced and pressed tinware and enameled ware. The last two lines of goods have been advanced several times by the manufacturers in the last two or three months. Some of the advances have been so pronounced in their character that we have hesitated about making so much of a change in our prices to retailers as the manufacturers' advances called for. As a matter of fact, we believe that on some lines of goods the manufacturers have been rather exacting, and a little rapid in the higher rates that are being enforced.

Our own motto is "Live, and let live" and carrying out that policy we have preferred to keep our retail friends in good humor during the late advances, rather than to be too exacting in having our traveling salesmen charge for each line of goods up to the last limit, even if it can be proven by figures that the goods are worth it.

We realize that raw material is a great deal higher, and that the advances in labor have come to stay for at least the next year or two, but we shall be entirely satisfied as a firm if we do not receive the full benefits of prosperous times all in one year. The backward spring weather has interfered to a certain extent with our mail order business. Our traveling salesmen, however, have nothing to complain of and are not only very successful in selling large quantities of goods for immediate delivery but are also doing well on future orders for late spring and summer goods.

Collections are very good indeed; all of the better class of customers are discounting for cash. Failures are very infrequent, and the Chicago city retailers are purchasing from us in quantities that remind us of 1892 and 1893.

WELLS & NELLEGAR CO.

THE BUFFALO TRADE.

With rapidity which almost takes one breath away we have passed the quarter mile post of this year, and on the rapid wheels of time we are speeding swiftly to the half. The happy days of the past three months have inspired us, filling us with bright hope and anticipation for the future. January, February and March of 1899 have a record in business history, almost if not quite without parallel, and if the trade of the remaining nine months compares at all favorably with the first quarter, the present year will be the banner one for the Hardware trade in this grand republic of ours. To those of us who are younger in the trade the phenomenal record seems a dream; perhaps to the older men it is only the repetition of some of their former experiences. What does it all mean? Who can tell? Father Time alone can answer.

Perhaps we may be permitted a moment of reflection and for the present that will suffice. November last they began to put the "screws" on us The iron market moved upward, and the rise in price of this product was not surprising until a price for bars was reached which led the cautious man to reflect. Galvanized Sheets began to show an upward tendency, Black sheets soon followed, conductor pipe started, nails and wire began to feel lonesome, and they too must get a gait, and these all needed a certain amount of "tacking," and thus another line came in, and so one after another the various commodities gathered into combines. Then when we were beginning to feel peaceful once more, shovels and spades bethought themselves, and for fear that time would pass too rapidly they "scooped" the opportunity that seemed to offer itself, and we have been presented with an advance on this line together with others, so to-day the several lines are controlled by certain trusts and combinations Thus we are "hinged" and for the present we gracefully submit to the inevitable. We freely admit that in union there is strength, but the future alone must demonstrate whether or not the end will justify the means. Good fair prices for Hardware (shelf and heavy) are desirable for all concerned, and we as distributors will welcome a time and condition which would bring this about, but sincerely deprecate in flated values. We are inclined to believe, and we hope, that the men who have in hand the manipulating of the several combinations and the fixing of prices, terms and conditions, together with those manufacturing various single lines, will display such wisdom as will keep remote anything which in the end will bring reaction that would surely mean disaster. We have arrived at a critical period and to fathom the future puzzles the shrewdest men of to day. The opportunity is ripe to fix or unfix the confidence of the trade, and to accomplish the latter simply requires the juggling of prices. To cement the former means wise and judicious business methods on the part of manufacturers and jobbers, the following of which course will place business on a foundation which will be sure and steadfast for some time to come. Let us, therefore, with one accord, for the present at least, stand fast in faith.

WEED & CO.

THE MINNEAPOLIS TRADE.

We congratulate you upon your ninth anniversary. You are certainly publishing a paper that is interesting and valuable to the trade; may you have many happy and prosperous returns.

There is every indication of good business here the coming season. There is already considerable building on a small scale, residences principally, while quite a number of business blocks are contemplated, one a nine-story store and office building, being well under way; while another large building for the Chamber of Commerce

Digitized by Google

is in contemplation with a good prospect of the deal going through.

Dealers as a rule seem inclined to take advantage of the advances as made. Occasionally we hear of old prices being made by some of the smaller dealers, which we think as a rule is on account of the fact that the dealer has not had it called particularly to his attention that advance in price has been made. A supply house here persists in selling nails at about 20 cents per keg below jobbers' price and causes some little disturbance and annoyance. We hope in some way this can be prevented in the future. Presume the nail company could shut off supplies if a determined effort were made. Collections are unusually good.

While we shall not attempt to discuss the different subjects that you have outlined to appear in this issue, we cannot help saying that we think the jobber is necessary to the retailer from every point of view. How would it be possible for the dealers throughout the territory north and west from us here to procure the variety of goods that they are obliged to carry, without the jobber? Who purchases in carload lots and brings them to this central distributing point and in one shipment sends out goods that may have been collected from perhaps forty or fifty different points? Fully seventy-five per cent. of the orders placed by local dealers if made up in as large quantities as they could possibly handle would not make a factory shipment, and the difference in freight alone will pay the jobber a good margin of profit. Again, in a season of poor crops, which we are obliged to confess we do have up in this country once in a while, it is the jobber that carries the country dealer over from one season to another; that it would not be possible for him to arrange with forty or fifty different manufacturers to do for him. This of itself is a very important consideration; we feel occasionally the jobber goes after certain business, that from our standpoint he should leave for others; some manufacturers, however, do the same thing. Representatives come here to do business, and sometimes are inclined, if they do not succeed in interesting the local trade, go outside and pick up business that they can get; we presume this will always be the case.

Hardware jobbers are great expansionists; look at their stock as represented by their catalogue and compare with even ten years ago, and see the immense variety of goods they handle. We feel the jobber has a permanent place and is as necessary to the manufacturers as he is to the dealer. May the jobber, the manufacturer and the dealer prosper.

W. K. Morison & Co.

THE KANSAS CITY TRADE.

This is "All Fool's Day." Our boys have had their usual "jokes." The "greenhorns" have been initiated. One man came to the writer's desk as a last resort to learn where he could find a bundle of seventy-eight wheelbarrow spokes, for which he held a shipping ticket and which he had been directed to deliver to the check clerks in a great hurry. Others were hunting the "round squares," "meat augers," "left-handed wrenches" and "four-foot yardsticks," much to the amusement of the others, most all of whom had served time also.

We have been under a pressure which has not relaxed for a moment, so to speak, for the past four weeks, and, as a consequence, we note that March, 1899, marks the high tide in our business career.

As before noted, the orders we have received have not been individually large, but they have come in greater numbers than ever before. There have been excellent reasons for this state of affairs, some of which we are not particularly desirous to make known. We have discovered something.

Business in this section is not particularly hampered, so far as we note, by the backward spring.

When gentle Anna does come in earnest, we anticipate a continuation for six weeks longer of our busy days.

We have not fooled ourself into the belief that we were making "scads" of money simply because we advanced prices. Our money has been made on what we sold, not on what we marked up. Our orders were sold because we sold. The profits have been made on the sales, not on the change sheets.

We still are pursuing the course outlined in our letter of March 25th. When the time shall come to take a toboggan slide, there will be fewer slivers in the seat of our pants when we strike bottom, than there would be if we had ridden the little hobby horse to the very top. If we have gone up something like a rocket, we do not propose to come down altogether like a stick.

Every indication is favorable in our Kansas and territory trade for the usual large wheat yield despite the very severe winter now about ended. The yield of fruits may be greatly diminished, and the only thing about which we are directly concerned is the probable scarcity of applejack, which is the principal lubricant in Kansas politics.

A very large number of our customers report that they are building additions, enlarging their stocks; many new partnerships are being formed, and a large number, it seems to us, are selling out. Failures are very rare.

Collections present a feature which can be accounted for, doubtless, by two reasons, but we simply state that they are not up to the average.

The last trade letters in *Hardware* were certainly something for which its editor should be proud and which its readers should take note of. In fact, the issues of March 10th and 25th have not been, on the whole, surpassed since we joined the group. We think there is no egotism involved in saying that very few, if any, trade publications in the United States have a better staff of correspondents than *Hardware*. The average dealer who closely reads these letters and does not profit by them, is too dense for lucidity and too lucid for density.

This writer is particularly gratified to be associated with a group of men whose sympathies, sensibilities and ethical sentiments touch the high planes which have always dominated their ideas, as expressed through your columns. There can be no question of the genuineness of the ring which their blades give off. If errors of judgment should be occasional, the heart is, we think, intensely earnest, conscientious and concerned that we shall as nearly as possible quit ourselves like men.

Gille Hardware & Iron Co.

THE DENVER TRADE.

Reports of trade conditions these days are so unanimous in expressing unusually large business, it doesn't seem necessary to add to the volume of testimony. But there seems to be an ever-readiness on your part to listen to our tales, whether they be of woe or good things.

We are pleased to say that Colorado is "in the swim," and if she is not leading the procession, we cannot account for it. There is every reason why she should. The past year was one of unparalleled productiveness in this State, agriculture, mining of all kinds, fruit, and so to the end of the list, and the list is annually extending. Did you note that in the speech of Mr. Carnegie at Pittsburg a few months ago, when the statement was made that Pittsburg could produce and deliver iron products and successfully compete with any country and place on earth, he made one exception—Colorado? Of course, we know the statement was correct, bnt how many have thought of what such an exception means for the future of this great State?

With a big trade on our hands at this time, and with so

much that is promising for the future, it doesn't need a prophet to predict a prosperous 1899 for this locality.

We hope you will continue to get your regular trade letters, but that business will continue so large that your correspondents will find it difficult to get the time to write them.

GEO. TRITCH HARDWARE CO.

THE ST. PAUL TRADE.

The weather conditions in the Northwest during the month of March have been very unfavorable to the retail dealer. Extreme cold, accompanied by snow storms and blizzards, has had the effect to very much curtail their sales, which of course has had some effect on the business of the jobber. Notwithstanding this, the wholesale trade has been very active, and figures show that sales are largely in excess of the corresponding month in '98. The retailer has evidently aroused to the fact that the advances that have taken place will be good for some months at least, and that "the end is not yet," but that farther advances are liable to occur. As a consequence, he is to some extent anticipating his wants, and is buying much more freely than is his usual wont at this time of the year. The result of this early business in advance of the season will be that less quantities of goods will be wanted later on, when the business is usually the most active. We do not know to what extent the retailer is taking advantage of the advances that have been made, but as for the jobber, we believe he proposes to get the full benefit of the same. This means great activity in the pricing and change sheet department, as daily changes are occurring, and the traveling salesman must be notified.

The boom in prices now on, excites in conservative minds, the fear that the outcome of the same may not be such as might be desired. As this "boom" seems to be manipulated by the trusts, (old and new), the cry against them which has been more or less pronounced in the past, is being taken up quite generally by the press of the country, and in a tone which would indicate that a vigorous attempt will be made to secure legislation against them. The industries that are most vulnerable to this attack are those that enjoy protection by the tariff. Undoubtedly an effort will be made to remove these duties, and in this there is danger that the whole protection system will be upset. It is to be hoped that those trusts who now seem to have the power to advance prices to an unlimited extent will call a halt before such opposition to them is aroused as will result in disturbing the business of the whole country.

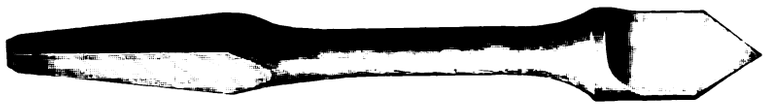
C. W. HACKETT HARDWARE CO.

THE BIRMINGHAM TRADE.

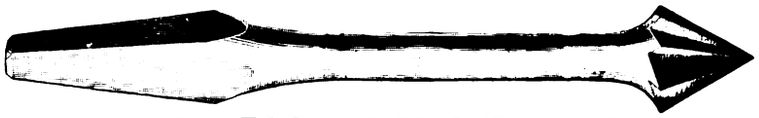
In fifteen years' experience in selling Hardware, we do not recollect so many rapid and radical changes as we have seen in the past sixty days. We now feel that many things are very high, because we have become accustomed to see them very low. A comparison of prices now with those of 1879 and 1880 will show that they are still very low. We have a different condition now from what we had then; the capacity for manufacturing now is much greater than it was then, and since the prices have advanced to the point of curtailing exports, this will be added to the home consumption, together with the additional supply from plants which had been abandoned but now put to work on account of the advance in the market, and it appears that the upward tendency will be checked during the latter half of the year, under these circumstances. These are some of the questions which must be studied by the wide-awake buyer in order to be on the advantageous side of the market. Trade has been active in our territory and we are inclined to look for a continuation throughout the year. Our architects are all busy bringing out new work which promises activity later on in the builders' line.

The improvements now going on at Ensley City, one of our important suburbs, are giving work to quite a force of men and distributing large sums of money. Many houses must be built for the operatives, creating a demand for all kinds of builders' supplies. In addition to this there is

IVER JOHNSON Bulletin.



Of Special Interest to Hardware Dealers!



WE want this week to call the attention of the hardware dealers to our line of Iver Johnson Cycles. Many hardware firms are now selling our bicycles and they find the business profitable. With a good line of honest, well-made wheels, which will **stay sold** when sold, there's no reason why any good progressive hardware house can't make this branch profitable. Some of you are now selling Iver Johnson Firearms—you know their quality. Our Cycles are just as high-class. If our Cycles are not sold in your city, write us for prices, etc., and we'll be pleased to take the matter up with you.

work in extending railroad lines, and all in all we have a busy, growing section of the State. Our people are all hopeful and confident and some of the most enthusiastic say we will have more than two hundred thousand people in 1910 when the census is taken. We are not inclined to think this prediction very wild. Birmingham has already obtained the reputation of being able to price pig iron for the world, and some predict that ere long she will take the same position on steel. Why not? We have been buying freely, but find some difficulty in getting deliveries promptly, and while this continues we do not look for any decline.

Moore & Handley Hardware Co.

THE PITTSBURG TRADE.

The present rapid advance in prices by manufacturers, furnishes another reason for the jobber's existence. Jobbers must carry extensive stocks of all kinds of goods. These stocks are a safety valve on values, and must be considered by manufacturers whether either an advance or fall in prices is contemplated.

For several years the stocks generally carried by jobbers have been as light as possible, because of falling prices. This made a great demand when conditions changed, and jobbers are now generally stocked to their normal capacity.

That present stocks will be quickly absorbed by the retailer and the consumer, is confidently expected because of the improved condition of all classes, farmers, mechanics, and laborers. Employment is general and at better wages. Railroad building and other large enterprises are going forward, and export business continues in large volume, both of the products of our farms and shops.

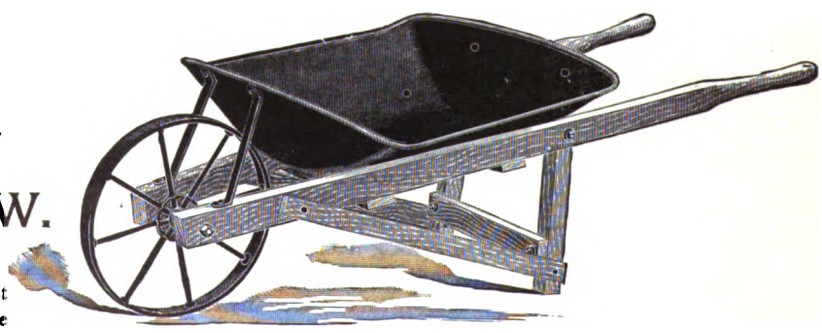
However, should prices be forced too high, the jobber is the first to perceive it and his decreased demands check the advance. His stock will carry him along until the manufacturers find the proper level for prices.

March weather was very rough and country roads almost impassable, yet sales showed 33 per cent. advance over 1898. Genuine spring weather will quicken sales greatly, and it is certainly due by the time these lines are read.

Logan-Gregg Hardware Co.

THE PORTLAND TRADE.

The season in Northern New England is very backward, and March has proved a very solid winter month from start to finish. The lumbermen have from ten to twelve feet of snow in the woods, and there is good sleighing throughout most of this northern section. The large quantity of snow would indicate that the lumbermen will not be much troubled for water with which to drive the logs out of the streams and rivers, enabling them to get them into the booms, with the least possible expense.



This branch of our New England business is having a boom almost in proportion to that enjoyed by the Hardware trade. Prices are extremely high, and it is easy to make sales. Some of our lumbermen say that they are not anxious to sell at present, as the longer they hold their stocks the more they will realize on them. Of course this all helps the Hardwareman.

The ground throughout this section has been well covered with snow all winter, protecting the grass roots, and speaks well for a good crop of hay the coming season. When the spring opens it will probably come with a rush, as the frost is not deep, and the roads will settle quickly.

Hardware is selling well for the season, and the jobbers have no cause for complaint. We do not think the retailers as a general thing have fully taken in the situation, but as

soon as they make up their minds that the prices now ruling will be sustained throughout 1899. and will rather advance than decline, the better it will be for them, as most all lines of goods are scarce and the earlier orders are placed. the better for all concerned. We have tried with our own trade to impress this upon them, and of course after going through the last seven years of steady depreciation in values, it is hard to make the trade understand that the turn has come, and that it is based not on speculation or a flurry in the market but on a healthy increased demand for goods such as has never keen known in the Hardware trade.

In the past we have always been confronted with the fact that as soon as our own wants were supplied then stocks accumulated, and prices depreciated, but to-day the foreign demand for Hardware is so great that we think it will be almost impossible to accumulate any unwieldy stocks, as has been the case in the past. We are prophesying that anything bought on to-day's market is safe at least for 1899. Hardware is not high to-day based on the cost of raw material, in fact it is not near high enough. Many of the manufacturers have advanced their prices so slightly that it is hardly noticeable, but they will have to make larger advances in the near future, it seems to us a foregone conclusion, as when their stocks of raw material purchased on the bottom of the market, are exhausted, they will be obliged to pay so much more for their new supplies that they cannot possibly sell as they are now selling.

The price at which Bessemer Pig Iron has been selling for the past week for purchases as large as 130,000 tons, would seem to indicate that for the second half of the year it would not go much below the figures of this large purchase.

We think the jobbers are generally keeping with the market, as no dealer can afford to sell out his present stock except at such prices as will give him a profit on the new cost, and there are no stocks but will have to be replenished long before the present prices are changed.

One pleasant feature of the situation is that all classes of the trade, from the manufacturer to the consumer, are getting a benefit from the present advances. There are none except those who are very short-sighted but what have a great many goods on which they will realize a profit out of proportion with the ordinary margins they have been accustomed to. We trust our retail friends will follow the markets as closely as does the jobber, and will take the profit that justly and rightfully belongs to him this year. We think the jobber has not done enough missionary work in this connection, and that all jobbing houses should instruct their salesmen to urge upon their customers the necessity of their advancing their prices and keeping up with the markets.

Certainly this year should enable the manufacturer, the jobber and the retailer to get some of the losses they have been obliged to face for the last few years.

Emery-Waterhouse Co.

THE COLUMBUS TRADE.

Still the booming of prices is on, and no signs of letting up. It has become the custom of some manufacturers who make a large line of articles, to change their prices every time tin or copper changes. It is really sad to think that, after advancing prices good and plenty, and no doubt having a large stock of material on hand and stock made up, that they cannot make prices that will hold good for a day. It is next to impossible to keep track of the numerous changes. Seems to be more in the nature of an epidemic than a necessity in a great many cases. Thirty-five per cent. on carriage bolts is a pretty stiff advance, but the advance in iron justifies it; but now won't they please quit and give us all a chance to recover? There was a question in the question box at the Ohio Hardware Association asking if manufacturers of bolts could not be induced to give the nuts an extra turn, so they would not fall off as soon as a package was opened. We think with a thirty-five per cent advance they can afford to give them several more twists, and suggest that this is an opportune time to go after them.

We had another visitation of the beautiful snow this week, and hope it is the last. There was another advance of a half-cent per pound on rope, and the next day it snowed. We have no doubt that was the cause of the last snow. It also snowed right after the last advance on nails and wire. Now, if there is no other reason for not advancing prices where they have already boosted them up good and high, we hope that manufacturers will realize the fact that it is time to plant peas and lettuce. Now won't they "Pease Let-us" have a rest for a while? It will snow mighty hard some of these days, and some of these boomers of fictitious values are going to get buried so deep they will have to be thawed out by a hot summer sun. We are not pessimists

and know full well that prices were too low, but we are just as certain they are going to the other extreme. We hope manufacturers will profit by past experience and know when to let well enough alone. Trade is good and collections are fair, considering the condition of the country roads. SMITH BROS. HARDWARE CO.

THE OMAHA TRADE.

Unusually cold weather for the time of the year is still with us, and has a material effect in retarding trade. Prevailing conditions are a little uncertain, some authorities claiming that winter wheat is seriously injured, while others equally well informed claim that it is in good condition. There have been heavy losses in stock on the ranges on account of the severe weather which will probably, to an extent, affect business in those localities, but in a general way the business outlook is favorable, and as soon as the roads and weather are in condition for people to do business, there is no question but that everybody will have their hands full. Prices are being well maintained, few, if any, of the dealers showing any lack of confidence in the market, though we probably all realize that the further we go up, the further we shall have to go down. It seems unfortunate that the conditions were not such as to allow the advances made to have been on a more moderate and, for this reason, a more permanent basis.

We shall all, however, have to make the best of the situation as it exists, and when the time comes to take our medicine, take it with the same grace that we are now taking advantage of the market advances, and the dealer who fails to place himself in position to stand the declines when they come, is certainly much in the same position as the party who fails to insure because he don't think he will ever burn out. Collections might be better; have been a good deal worse. RECTOR & WILHELMY CO.

THE GRAPHITE INDUSTRY.

We wrote in our last month's letter that January and February were banner-bearing months and led the procession. This we considered a rather smart thing to say, but now comes March and knocks the "spots" off such a simile —for it takes the banner, and forges so far ahead of the procession that it "beats the band" and is "out of sight."

We have been in the graphite business over seventy-two years, but the month of March eclipses anything in our experience with sales which demonstrate that not only are we "the largest house of its kind in the world," but that we also are fully able to meet the demand for our goods.

Of course, we have been compelled to enlarge the works and office force, but we do it without hesitation and in the full belief that the demand will continue great enough to warrant any reasonable expenditure.

Another new four-story addition to the pencil works is now in course of erection—and plans are being perfected for an increase of space for the crucible manufacture, with minor necessary changes going on all the time.

It is not necessary to go into details and figures, but those of your readers who have had occasion to honor us with orders are in a position to realize how largely the graphite products of our company have been in demand, and how promptly we have done our part as to shipments.

Sales have been largely augmented by foreign orders—through our established salesroom in London, and accredited representatives in Germany, Austria, Norway, France, Denmark, Holland, Australia, Mexico, South America, South Africa, Japan, China, etc. We are now world-renowned—particularly through the demand for Ticonderoga Flake Lubricating Graphite.

Vice-president Walker will visit a number of the foreign representatives in May, but more for social than business reasons.

We are drifting into the position of the apple woman who refused to sell apples to one customer for fear another customer might came along and she would not have any more apples to sell, but we shall endeavor to steer clear of such judgment. JOSEPH DIXON CRUCIBLE CO.

The Humason & Beckley Mfg. Co.

Editor Hardware: A report having been circulated to the effect that it was our intention to give up our New York office, we beg through your columns to deny the same and further to state that we have never had any idea of so doing.

In order to save detail and clerical work we have given up carrying stock in this city, but we are still at the old stand, where our friends will receive every attention and all our orders both large and small will be promptly filled.

Very truly yours,

New York, April 7, 1899. HUMASON & BECKLEY MFG. CO.

One day, Billy—that's my brother—he and Sammy Doppy was playin' by a mud hole, and Billy said:

"Now, Sammy, les' play we was a barnyard; you be the pig and lie down and woller, and I'll be a bull and beller like everything."

So they got down on their hands and knees, and Sammy he got in the mud and wollered, while Billy bellered like distant thunder. Bime-by Sammy he cum out muddy—you never see such a muddy feller—and he said: "Now you be the pig, and let me beller." But Billy said: "I ain't a very good pig fore dinner, and it'll be time 'nuff for you to beller when yer mother sees yer close."—*Scrap Book.*

Some very pious souls are shocked when people dare advance
The thought that this old earth, at best, is but a world of chance,
And since this speculative view of things their minds appal
We must conclude that they believe we have no chance at all.

HARDWARE business on Pacific Avenue, Tacoma. Stock inventories $20,000. Manager recently deceased and owners desire to sell. Business established in present location ten years ago. Address THE SYNDICATE CO, No. 503 California Building, Tacoma, Washington.

English Patent for Sale.

EDWIN G BENNETT, patentee and manufacturer of the "Boston Cold Storage" Butter and Cheese Cutters, notifies us of his desire to dispose of his English patent on this article. As a ready sale is being found in the United States for this cutter, which we believe enjoys the distinction of being the only tool of its kind on the market, it is reasonable to suppose that the foreign sale should be equally satisfactory. All inquiries should be addressed to E. G. BENNETT, No. 2 Parlin Street, Everett, Mass., U. S. A.

Patent for Sale.

ICE-SCRAPER or Shredder Patent for sale. Best and cheapest hand device yet made. Address "PATENTEE," care HARDWARE, No. 143 Chambers Street, New York.

File Factory for Sale.

ON Saturday, April 1, 1899, the plant of the late McClellan File Co. will be sold at the Saginaw County Court House, by the Circuit Court Commissioner, to satisfy mortgages about one-third the value of the plant, which will be sold entire, comprising real estate, buildings and all machinery. The factory has a capacity of 500 dozen files per day, and is one of the most thoroughly equipped file plants in the country. Plenty of cheap fuel. An elegant opportunity on a small capital to manufacture files for the trade, or to operate it as a re-cutting factory. For further particulars, address GEO. J. LITTLE, Saginaw, Mich., for mortgagees.

Agency Wanted.

EXCLUSIVE agencies for patented articles in the Hardware specialty and novelty line. SPERRY & ALEXANDER, No. 10 Warren Street, New York City.

A PARTY with many years' experience on the road, and who has a first-class agency for the United States, would like to add one or two more lines, or would join with another who has good agencies. Address B., care HARDWARE, No. 143 Chambers Street, New York.

EXPERIENCED Hardwareman desires to represent manufacturers or jobbing houses of Hardware and house-furnishing, or anything in the building line. Have a very good standing among contractors and building fraternity of Cleveland, Ohio, and vicinity. Address CHAS. L. HEISER, care the Builders' Exchange, Cleveland, Ohio.

MANUFACTURERS' AGENT, with well located store in machinery district in New York, would like to hear from manufacturers wanting a reliable representative; have an established trade and years of experience. Address GEO. W. CHURCH, No. 183 Greenwich Street, New York.

Foreign Agency Wanted.

A GENTLEMAN with large experience and with good connection in all the principal towns in Newfoundland, is prepared to undertake additional agency in Hardware trade; good testimonials and references from firms represented. Address GEO. B. PARSONS, P. O. Box 331, St. Johns, Newfoundland.

English Agency Wanted.

A GENTLEMAN who has been in the Hardware and cutlery line in England for twenty-five years wishes to represent American houses in light iron and steel line, patented novelties, etc., or the sole sale for England on his own account. Address Box 96, care HARDWARE, No. 143 Chambers Street, New York.

Agency Offered.

WE would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "BOX 88," care HARDWARE, No. 143 Chambers Street, New York.

WANTED agents to handle a patented, labor saving device of universal sale; investigation solicited by men who desire quick returns from a legitimate, profitable business. Address (C) BURR MFG. CO Cleveland, O., 823 Society for Savings.

Business Chance

FOR SALE—A complete table cutlery plant, with up-to-date machinery, all of which is nearly new, and in good order for immediate operation. A splendid opportunity for a few practical cutlery men, with limited capital, to build up a paying business, as the entire product can be sold on contract in advance.

For terms and particulars, address

J. B. WHITEHEAD,
Assignee National Cutlery Co.,
Rockford, Ill.

Attention, Salesmen!

SALESMEN on uncovered ground can add hose, tires and full rubber line. Free samples. Cash commissions. Protected ground. One salesman earned $3900 in 1898. MINERALIZED RUBBER CO., New York.

Attention, Manufacturers!

FIRMS contemplating going into the enamelling business or wishing a new formula to enable them to add to their present lines in one or two coated ware, are invited to correspond. Highest references. "EXPERIENCED ENAMELLER," care HARDWARE, No. 143 Chambers Street, New York.

THE AUDIT COMPANY OF NEW YORK.

ARTICLE XIV.

EXAMINATIONS TO BE CONFIDENTIAL.

Section 1. The results of all audits and examinations made by this Company shall be treated as strictly confidential by both the examiner and the manager of the Company. In all cases, unless otherwise directed or requested by the applicant, the reports of the Company shall be made in duplicate, one to be delivered to the applicant and the other to be sealed up and retained by the Company.

Sec. 2. In no case shall the duplicate report so retained by the Company be open to the inspection of the directors, officers, or employees of this Company, nor shall the contents be made known except upon authority of a resolution of the Board of Directors of the Company.

Sec. 3. Each officer and employee of the Company who shall participate in making examinations or audits shall, on entering the employ of the Company, make oath that he will not divulge any information obtained by him in the course of his employment relating to audits and examinations.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"ON OUR AD. LIST AS ONE OF THE BEST."

Troy Nickel Works, Troy, N. Y. [*Alaska Stove Hardware*]: You are on our advertising list as one of the best. We will be glad to keep you in this position.

"TRACE MANY SALES TO 'HARDWARE.'"

Philadelphia Lawn Mower Co., Philadelphia, Pa. [*Lawn Mowers*]: We have been with you for some years, and can trace many sales to HARDWARE's influence.

"BEEN WITH YOU FROM THE BEGINNING."

Union Metallic Cartridge Co., New York. [*Ammunition*]: We have been with you as advertisers from the beginning and expect to continue.

Unique Trade Mark.

The Covert Mfg. Co., West Troy, N. Y., have a very unique Trade Mark, and one which attracts universal attention. All tags and labels on their goods bear this trade

mark, which forms a prominent feature in their page advertisement on page 67 of this issue of *Hardware*, to which we call particular attention.

"BEST INVESTMENT EVER MADE."

Divine Bros., Chadwicks, N. Y. [*Buffing Wheels*]: Our advertisement in HARDWARE was the best investment we ever made in the advertising line.

New Jersey Wire Cloth Co.

MANUFACTURES

THE ROEBLING STANDARD WIRE LATHING,

"JERSEY" POULTRY NETTING and FARM FENCING.

PAINTED AND GALVANIZED WINDOW SCREEN CLOTH.

AND EVERY KIND OF

IRON, STEEL, BRASS AND COPPER WIRE CLOTH.

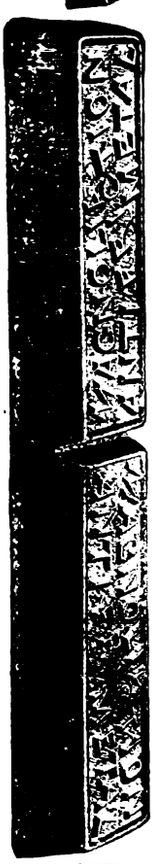
BEWARE OF IMITATIONS.

MAGNOLIA ANTI-FRICTION METAL

is our specialty. Name and Trade Mark on each bar. We make only one grade. Its superiority over Genuine Babbitt and all other grades of Babbitt metals is universally admitted. Magnolia Metal is being sold in every civilized country in the world and is being used in at least 100,000 establishments in U. S. and Canada.



A regular scale of prices is observed to consumers, and special discounts to dealers and jobbers.

We are also prepared to supply all cheap grades of babbitt metal—Genuine Babbitt, Genuine Hard, Extra Copper Hardened, Nos. 1, 2, 3, 4A, 4, etc.

We will guarantee the quality of these metals, and also guarantee to make better prices on combination orders than any Metal Company in this country.

If you desire special brands under your own name we can please you in both quality and price.

WHY IS C. E. JENNINGS' NEW AUGER BIT No. 1¼

THE BEST BIT FOR WOOD BORING IN THE WORLD?

Because: There are good bits made for hard wood. The L'Hommedieu Ship Bit is an excellent tool for this purpose, but it is not designed for fine cabinet work or soft wood. There are good Bits for Soft Wood, but fail when used in hard wood We have combined two principles in one, and think we have solved the problem of putting a bit on the market that is suitable for all around use. Prices furnished the Trade on Application.

"EVERYTHING IS COMING UP."

BUSINESS IS BETTER AND THERE WILL BE A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.

Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.

THE BURR PATENT STEEL.

Safety Lift Block

A Perfect Self-Locking Rope Tackle Block.

Runs as freely as an ordinary rope tackle block.
Holds more securely than a chain block.
Locks instantly and does not cut the rope.
Allows the load to be lowered safely and slowly, the operator using only one hand.
Cannot stick nor jam when the load is to be lowered.

"I have tested the Burr Self-locking Steel Tackle Block and find it the most practical, quick and reliable Safety lift I know of." J. C. DEBES, Supt. of the C. & G. Cooper Co., Mt. Vernon, O.

FRED A. CATON, - - 31 Milk St, Boston.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The commendations which have reached us from all directions, concerning our special Hardware Jobbers' Number of April 10th, furnish a double gratification. They show, in the first place, that the promises made concerning this special edition have all been fulfilled; and in the second place, that the trade everywhere are ready to show appreciation of any special effort made in their behalf. The good words concerning this number, which are found in another portion of this issue, are but a few selected from the many, and we do not believe that in all the history of trade journalism, a number was ever issued which excited more comment, and won more golden opinions than have been recorded in regard to this special Jobbers' issue. In making acknowledgement of this fact, we desire to cordially thank the individual members of the trade who so materially assisted in the preparation of this number, and to also extend a word of cordial appreciation of the good words which have been said in behalf of the same.

Editorial Trade Review.

The advent of spring weather has had an exhilarating effect upon the general trade, and many lines previously sluggish in movement have become active, showing a promising and busy future even under advancing prices. A brisk demand for builders' Hardware is making itself felt in almost every section. The increasing activity and higher wages among the toilers in our various industries bring as a natural result a commendable desire for more convenient quarters to live in and a greater ambition for something better in other directions. No fear is felt of any retrograde influence affecting our skilled mechanics; when work is plenty and remuneration satisfactory, the sunshine of prosperity is so evident that "all the clouds that lowered upon our house are in the bosom of the ocean buried."

While many changes in prices are constantly being formulated and adjusted with each passing week, the spasmodic condition of the markets which was their most pronounced feature in the six weeks just past, is not so noticeable. Many goods have been held at conservative quotations, until advances on raw material, which at first appeared but nominal, have assumed proportions that make higher quotations compulsory. Those that have not changed materially may be anticipated before another season swings into shape. By that time stocks bought at nearly old prices will no longer cut so great a figure in the market, and the trade will be prepared for more stable quotations.

There is some complaint that orders are not being filled by the manufacturers with a fulness that enables the jobber to satisfy his customers among the retail trade. The stocks that earlier in the season were supposed would be filling warehouses to repletion, it has been found difficult to accumulate even under an urgent correspondence regarding the same. Increasing demands from every quarter, depleting the half-satisfying deliveries from the factories, are creating a feeling of apprehensiveness regarding the materializing of all the profit so surely estimated among the probable results. A jobber's position under such circumstances is regarded by the trade as different from that of a manufacturer; the retailer waits on a factory delay with commendable patience, but in his relations with a jobber a delayed delivery inaugurates a hunt for another jobber with larger resources in the way of supply.

The advance in price on wire products was not unanticipated, as the markets are so completely controlled by the American Steel & Wire Co., they can handle them as tney see fit, especially as the profits of previous purchases are keeping the jobbers in excellent good humor. As deliveries have been none too swift, the stiffening of price is regarded as being in the line of the policy adopted by this company. The demand continues to be of such a favorable character but little doubt exists in the mind of the progressive dealer that the present conditions surrounding wire and similar products have come to stay. No better evidence need be given than the fact that advances in wages, which are constantly occurring among the manufacturers, prove to a certainty that order books are still choked with unfilled specifications, the dilatory deliveries alone causing the cautious dealer to anticipate the requirements of the future.

While the export outlet for standard goods,—on which the domestic demand is still sustained with vigor,—is not being pushed with the ardor of twelve months ago, still this actively important branch of our business is by no means abandoned by any of the manufacturers who have experienced its growing advantages. While our advancing quotations on some exporting lines retard the speculative expansion of this field for business, it must be borne in mind that the increasing cost of the metals used in the manufacture of many of our specialties is equally as high in all parts of the world where competition would create comparisons of cost, and the advantages of our mechanical appliances, skilled labor and prompt delivery, from un-

Digitized by Google

equalled resources, are still to be counted on as being greatly in our favor.

No Cause for Anxiety.

The lull now apparent in current sales by manufacturers to the jobbers is apt to make them apprehensive that business is at a stand still; the manufacturers in many cases, with orders that will take months to fill, have got so used to seeing long specifications for stock come in by every morning mail, they dread the change, fearing a time will arrive, as in the past, when they can see an end to the rush conditions that have prevailed of late.

But all this time business is naturally being adjusted to a state of affairs that will affect next season's purchases. It is no longer a question if prices will remain as when present stocks were ordered, or whether they will be subjects for competitive strife, with demoralizing results. As the markets controlling raw material are significantly stronger than at any time this year, and as orders for their product have delivery extended farther into the coming season than any manufacturers special lines; advanced quotations will be the rule instead of the exception for some time to come.

New Members Hardware Club.

At a recent meeting of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in that organization:

George T. Montgomery, No. 105 Fulton Street.

Edward Fifield, No. 56 John Street.

W. D. Walkley; Peck, Stow & Wilcox Co., No. 27 Murray Street.

Charles Straus, No. 237 Broadway.

We have received from the United States Steel Lock Co., Clinton, Iowa, an attractive little catalogue in black, green and gold, illustrating and describing the Warner high-grade steel door locks and artistic trimmings which they manufacture. In a note of introduction they say: "On the 5th day of December, 1898, D. J. Batchelder purchased from the Warner Lock Co., Chicago, their entire plant for the manufacture of steel locks and other Hardware, with all their machinery, fixtures, tools, trade-marks, patents, etc. Mr. Batchelder has since put the plant in first-class condition and re-engaged the skilled workmen formerly employed, and the business is being conducted by him under the trade name of the United States Steel Lock Co."

The Payson Mfg. Co., Chicago, Ill., will on May 1 remove from their present location at No. 111 Chambers Street to a more desirable office at No, 88 Chambers Street, where they will be on the street floor, and intend fitting up handsome and complete sample rooms for the sale of their line of desirable specialties. Their business in this city will be under the charge of Frank Pfeifer, who has for so long a period been identified with this progressive company as New York manager, and who will be pleased to welcome his old friends in the new location.

Projectiles used for the United States army for its great modern guns cost as follows: Solid shot, 8-inch, $69 80 each; 10-inch, $144.50 each; 12-inch, $212 each; 12-inch mortar shells, weighing 800 pounds, $114 each, and 12-inch mortar shells, weighing 1000 pounds, $195.—*Exchange.*

If people were compelled to bury their faults the undertakers would be kept busy.—*Exchange.*

Complimenting Our Special Issue.

E. S. Hulbert & Co., Bernardston, Mass.: "Your 10th issue is a beauty."

Peters Cartridge Co., Cincinnati, Ohio: "Your Jobbers' Number is at hand, and is certainly a very handsome volume."

C. E. Jennings & Co., New York: "We have just received your April 10th Anniversary number, and are delighted with it. You have certainly displayed a great deal of taste in the arrangement of this number."

North Bros. Mfg. Co., Philadelphia, Pa.: "We congratulate you on the fine appearance you make in your anniversary issue of *Hardware*."

Supplee Hardware Co., Philadelphia, Pa.: "The greatest pleasure we have to-day is in being able to congratulate you upon the very excellent and most satisfactory edition of your Hardware Jobbers' number. We have not had an opportunity as yet to digest any of the articles it contains, but will count it a pleasure to do so at a very early date, and know if we cannot secure some benefit and gain some knowledge from the wisdom of others the fault will be our own. The paper has already caused favorable comments by a good many who have had the opportunity of examining it."

Joseph Dixon Crucible Co., Jersey City, N. J.: "The April 10 number of *Hardware* is indeed a beauty, and a credit to you, and you must have hustled considerably to get out such a fine paper with so much matter."

William Johnson, Newark, N. J.: "The Anniversary number of *Hardware* is at hand to-day, and my advertisement makes a very fine appearance."

Ferracute Machine Co., Bridgeton, N. J.: "Your very handsome and complete anniversary number of *Hardware* is received. We congratulate you on attaining to your ninth year in publishing so excellent a paper. We find it very useful, and the most complete publication of the kind that we have yet come across."

Huber & Kalbach Co., Oskaloosa, Iowa: "Your Jobbers' Number of *Hardware* is certainly a very complete and nicely gotten up paper."

Lockwood-Taylor Hardware Co., Cleveland, O.: "Your anniversary edition is a model of excellence."

The ninth anniversary of *Hardware*, one of the most popular trade papers in America, was marked by a 196-page issue bound in yellow enameled cover printed in black and red. The representative firms in the hardware trade from the North and the South, the East and the West, testifie their appreciation of the sterling merits of *Hardware* by liberal announcements, which combined an unusually interesting and attractive exhibit of the Hardware trades output and most recent inventions. Articles and letters appear from representative firms in different sections of the country, in which the future of the jobbers is treated, and the relations of the different branches of the trade, one to the other, considered. Twenty-four pictures of *Hardware's* staff of correspondents are among the notable features. We congratulate our contemporary upon the success of this issue, but beyond that upon its enjoyment of the hearty good will and support of a great industry.—*The American Grocer.*

"Now, I suppose," remarked Mrs. Snaggs, "that the surgeons of the army are attached to the medical corps."

"Your supposition does you great credit," replied Mr. Snaggs sarcastically. "It's a wonder you didn't imagine that doctors joined the army for the purpose of building bridges or going up in balloons. Where should army surgeons be except in the medical corps?"

"Well, I thought that they might possibly belong to the Lancers."—*Pittsburg Chronicle.*

PHILANTRHOPIC SIDE OF THE MANUF'T'R.

Some time ago a number of prominent manufacturers from the East paid a visit to the plant of the National Cash Register Co., of Dayton, Ohio. The object of this visit was to study certain economic and philanthropic ideas put in operation for the joint benefit of capital and labor.

From among the operatives was chosen a number to represent their interests with the management in all questions where friction might be expected. A system whereby complaints and suggestions were brought to the attention of the heads of the factory was inaugurated. A free lunch for operatives was established; as were also free baths, cooking schools, clubs, libraries, etc., and numerous other innovations.

The impression made upon the visitors seems to have been favorable, in some cases at least. Myron W. Tarbox, of the Boston & Lockport Block Co., has since then carried on a correspondence with a manufacturer in Dayton with a view to finding out how these features may be applied to other businesses, and how they impress the neighbors of the National Cash Register Co.

As these letters contain much that may interest those who make a study of the question, we print two of them here:

DAYTON, Ohio, Feb. 6, 1899.

Mr. Myron H. Tarbox, Boston, Mass.:

Dear Friend: Your letter duly received. You of course saw many things down at the N. C. R. that were extravagant and not to be thought of for a moment in a business that is as closely run as yours and ours, but there are several things that are on the right principle, and with a little thought and care can be "worked over" to suit our surroundings. For instance, the Suggestion Boxes I have found to be of very great advantage. I explained their use to the men and said I would kindly appreciate any suggestions or complaints that were made in the right spirit; and where any complaints were just, I would cheerfully redress the grievances, and would not punish any one making any sort of a just complaint; and where any suggestions or improvements were made that were of real value I would reward the suggestion. I have found this of such great practical value that we have never run behind in a single year of the panic and have had to see our prices depreciate fifty per cent. Of course much of the depreciation has been in raw material, but at least twenty-five per cent. of it has been in labor, and we have not had to make a single cut in wages and have no labor troubles nor any difficulty whatever. We work about one hundred men in all our departments, about one-half of them skilled.

Another thing we have found of advantage is the meeting once a day for a half hour of all our heads of departments for consultation. The advantage of it is this. When we are busy we often find some work getting behind time or work congested in some department and work slack in others. Then the tendency is for each foreman to try to shield himself by laying the blame on some other foreman not present. Under this system we have them all face to face and in five minutes' time we can locate the difficulty and prescribe for its cure. In the old way it would take me the better part of the day to find it, and frequently I could not locate it even then. These are the two only things I use so far. I am considerable of an "old fogy" and am not quick to jump at things, and never "bite off more than I can chaw." As soon as I get one thing properly masticated I am ready to take off another bite. I am about ready to bite again as soon as I see something there that tempts my appetite. Some of the "frills" down there are out of my reach, as our profits are too small to allow us to indulge in such expensive luxuries, and some of them I think are simply huge mistakes. For instance, I do not approve of that hydra-headed monster that he calls the factory committee, and I don't think it works at all. It has a tendency to diffuse responsibility and each of the factory committee seems to be jealous of the other, and are afraid to make suggestions for fear they are not right, and each one feels that the jealousy of his comrades is apt to turn him down and so for fear that they may do something that will give him a cause for turning him down the factory committees usually are only "rag chewing" contests for the required hour and any real subject for decision is finally referred to the President, as it ought to be without the preliminary "rag chewing."

My belief in this matter has always been that a business to be run successfully must have one head on whom all responsibility must center, and any attempt to diffuse this responsibility only weakens the organization. An old farmer friend of mine once told me it was exceedingly bad policy to have "two bulls in one barnyard."

The matter of baths, landscape gardening, kindergarten, cooking school, clubs, libraries, etc., is an expense that very few businesses can stand, and they really are not a part of the N. C. R. system except in this, that while some business men take their profits and spend it in yachts, race horses, balls, parties, etc., for the benefit of people abundantly able to buy their own, Mr. Patterson takes his profits and bestows them on the people who need and appreciate it, and who helped him to make it. In this I think him a true philanthropist and a public benefactor. He is showing the wealthy and successful man how to bestow his wealth so as to give the greatest happiness to those about him and at the same time to better the condition of laboring men and make all classes feel that there is a practical side to the theory of the "common brotherhood of man."

I am glad to have formed your acquaintance and would have been pleased to have had a chance to give you a good long chat. I am not much of a letter writer, and cannot express myself as clearly nor as glibly by typewriter as I can by "jaw." Like Billy Bryan, "the boy orator of the Platte" I am marvelously skilled in the use of Samson's simple weapon. Yours truly,

———— ————.

Dayton, Ohio, Feb. 16, 1899.

Mr. Myron H. Tarbox:

Dear Sir: Your letter of the 11th found me away from home. I now repiy. Our shop is somewhat similar to yours, our several departments are small, about twenty or twenty-five men in each. The problem that confronted us was how to meet the fierce competition that was on us. I called each department together and told the men frankly just what condition confronted us and then said that I would adopt the Cash Register idea. That I would not cut their wages for six months but would establish a suggestion box in each department and solicited their opinions and suggestions, and if at the end of six months we had been able to meet the competition the wages would not be touched, otherwise there would have to be a straight cut of twenty per cent. in all wages. This I thought was "prizes" enough. I was willing to run the risk for six months of the thing not working, and their "stake" was to keep their wages at their present price. To my utter

Digitized by Google

amazement the thing worked like a charm. At the end of six months, when we made a balance sheet, the result so surprised me that I was sure our book-keeper had made a mistake and I refused to have them engross the balance sheet for over a week until I had gone over it, and even then when I could not find an error, I proved the thing by throwing aside all books and taking an inventory of all we possessed and deducted our liabilities and th n subtracted our actual worth of the year before and found we were all right. It thoroughly increased the "morale" of our force, and we had then over fifty pairs of eyes constantly on the lookout for "leaks," that nothing was overlooked and the multitude of small savings made up a large sum. Of course the increase of subsequent years could not be as great as the first year, for the reason that there were fewer leaks to be found and subsequent improvements could only be made by inventing better methods of doing the work. I will begin next year again by offering rewards. What does a hundred or two dollars signify as compared with a shop that has a fine "*esprit de corps?*" The men thus get to take a closer interest in your business, employer and employee are not so far apart, there is a community of interest, and each learns to like the other and respect him.

You will have to be the judge of how you will start it, but a man who is as smart as I take you to be will have no difficulty in finding a way to make the thing practical in his own factory. I hope you will try it and be kind enough to let me know how it works.

In regard to consultation with heads of departments. I have no regular hour for it. I sometimes am delayed with getting some of my outside men under way or may be delayed with a customer from out of town, but I make it a point at the earliest opportunity I have after the mail arrives to call all the heads together in the office and briefly block out the business of the day and have them report just their condition; what is dragging, what is urgent, what can be side-tracked for more urgent orders, etc. All this has been done in fifteen or twenty minutes; whereas if I went around to each department, I would lose a great deal of time; and matters would come up in one department that I would have to consult another department about before I could give a final decision. In this other way I have them all together; and twenty minutes' consultation answers for the whole factory; while under the old regime it took fully that long for each department, and the work not be nearly so well done.

Yours respectfully,

The success attending the introduction of the Suggestion Box is certainly remarkable and worthy of close investigation by every shop and factory employing any considerable force. If such saving as intimated in the second letter can be effected it is well worth the trial; and no question of false pride, felt by some in consulting subordinates, should be allowed to enter into the question.

When a man is engaged by a manufacturer, whether in the capacity of general superintendent or of an unskilled laborer, his best efforts for his employer's interests are due to the latter; and it not infrequently happens that those in subordinate positions see many unnecessary leaks that must necessarily escape the eye of the foreman or superintendent; but owing to a feeling that volunteered information of this kind would be regarded as an impertinence the workman often hesitates to mention the matter.

Boston, April 18, 1899. FRED A. CATON.

"I suppose," said Elder Keepalong, as he took a seat on a bench in Deacon Ironside's shop and glanced around with a humorous twinkle in his eye, "it has never occurred to you to get up a book of proverbs out of your old saws?"

"No," admitted the deacon, "It never has. Still," he added, "I generally put 'em on file."—*Chicago Tribune.*

Southern Hardware Jobbers' Association.

As previously advised, the meeting of the Southern Hardware Jobbers' Association will be held at Atlantic City, N. J., on the 14th, 15th and 16th of June, 1899. This point was chosen this year for the reason it suited all interests best. The Islesworth Hotel has been selected for the headquarters of the Association, and a rate of $2.50 without, and $3.50 with bath, has been granted, which applies to all who attend the convention. Each morning session, and the afternoon session of the 16th, will be devoted to the joint sessions of the jobbers, manufacturers and their representatives. The other sessions will be of an executive character. Special passenger rates will be arranged for the occasion, the particulars of which will be given out at a later date. The Association extends a cordial invitation to each and every interested manufacturer, and to their representatives throughout the United States, to attend the convention, as the programme this year (which will be published later) has been arranged with a view of benefitting the manufacturers perhaps equally as much as the jobbers. The Hardware jobbers of all sections will also receive a hearty welcome, and are specially invited to meet with us. The representatives of the press, the jobbers, traveling salesmen, and our friends of other professions will also be welcomed, and will be admitted to all our joint sessions. To the executive sessions, however, only the jobbers will be admitted, otherwise the meeting is open to all.

The Belting in the Tunnel.

An important feature in the equipment of the Hoosac Tunnel Elevator, recently completed at Charlestown, Mass., for the Fitchburg Railroad Co., is the rubber belting which is used as carriers for the grain in the various galleries, and to which the buckets are attached for lifting the grain to the large storage bins.

The contractor for the elevator, James L. Record, of Minneapolis, Minn., awarded the order for the belting to the Boston Belting Co., of Boston, Mass. It comprised about 7,500 feet of 36-inch 4-ply, 1,600 feet 38-inch 4-ply, and 4,800 feet of 22-inch 6-ply, besides a quantity of narrower belts. The total weight of all the belts is upwards of thirty-five tons. The longest 36-inch 4-ply belt measured 1,500 feet, and several others of the same width were more than 1,000 feet long each. Each of the 36-inch belts carries about 8,000 bushels of grain an hour.

The belting in the original Hoosac Tunnel elevator, built in 1881–82, and which was destroyed by fire in February, 1898, was supplied by the Boston Belting Co., and the excellent satisfaction which it had always given was a strong recommendation for the company, and carried considerable weight in its favor in connection with the placing of the contract for belting in the new elevator just finished. Some of the original belts made in 1882, which were not destroyed by fire, are in first-class condition to-day and are doing good service in the present elevator.

We have received from the Boston Belting Co., Boston, Mass., a unique advertisement of the large postal card order. The illustration at the top depicts a modern cherub turning a wholesome stream of water upon a much patched and frayed tramp. It is, of course, understood that the hose used is that of the Boston Belting Co., and the tramp represents, by his general appearance of delapidation, the condition of some manufacturers' plants. The argument is that such outfits must go, and the manufacturer who hopes to compete successfully in the present time must have first class equipment that can be depended upon.

By assuming the very low stoop the enthusiastic bicycler is doing all he can to put his shoulder to the wheel and push it along.—*L. A. W. Bulletin.*

OLD JOBBING DAYS IN NEW YORK---II.

The order from a customer was taken in an order book after the goods were sold by inspecting the samples. These books were all known by specified numbers, and entered in a recording book, with name of customer, town and shipping directions, so it was always possible to tell how many orders we were behind, when purchased and when shipped; it being nothing unusual in the busy season for delayed orders to reach upwards of a hundred, large and small. The member of the firm, or principal salesman who had made the sale, handed the book to a junior clerk—who had an experience of not less than two years—to commence getting the goods out of stock; which he did after copying off for the clerks running the upper floors, the goods to be found there. The junior found a spot on the store floor where he could make a nucleus for his order, and in doing this many a fight resulted from encroaching on the demesnes intended for somebody else's big bill. The salesman always kept tab on the bill he sold, and after the junior reported it to be as complete as he could make it, he would see if he could substitute for some of the items a sufficiency of which was not found. Then the order was entered in the sales book from the goods actually laid out upon the floor, so the condition of the stock could be ascertained, in case complaints regarding it should be made by the customer upon receipt. All bills were looked back by a second party, thus making it doubly sure. As these long invoices frequently represented sales amounting from $1500 to $4000, it was considered by the junior as quite a feather in his cap if few errors were found, and his careful attention was commended. In my own experience, we were accustomed on a very long bill to charge it up in the evening, when all the counters and floors nearby enabled a proper display and inspection of the goods. This made the midnight near at hand when we left the store to go home, only to return again at 7 A. M., to open up.

The next day the two packers, the usual number, disposed of the big bill; smaller bills could be packed by anybody, one or two shoe cases often being the extent of the shelf Hardware, and the young man who charged it up was glad to pack it, and get it out of the way.

Many a time when our carman and his assistant were away shipping their loads, did we have to go out and hail any strange carman to take a load for fifty cents down to the Erie or Morris & Essex R. R., or some suburban boat, by which small shipments were the rule. The manner in which business was done in those days would seem decidedly primitive to the present generation, but we usually had the goods on hand, or knew where we could "pick them up;" rarely waited for anything to come in from factory, except to make some customary back order complete.

Previous to 1865 there wasn't a great deal of the systematic and persistent drumming for trade, which in its complete development at the present time, crowds even the cross roads and way stations with competitive hustlers, who are each armed with methods for selling, backed up by rolls of samples, with an immense catalogue covering everything possible for a dealer to want, and all suitably arranged for the territory he may be canvassing. In the days gone by, never to return, our catalogues of stock were merely memorandum books of what constituted our extensive assortment, and arranged on the pages in such a manner that the holder could go all over the line of samples and make his selections.

The first complete stock catalogue, suitable for traveling purposes, I can remember, was published by the Russell & Erwin Mfg. Co. about 1864, I think, and was a very large folio volume, quite heavy in weight, in which a full assortment of many standard requirements in Hardware were illustrated, all the goods of their own make being included, although the assortment in those days outside of locks, knobs and furniture for same, padlocks, shovels and tongs, and meat cutters, etc., was not very extensive, compared with a later date, but this large volume was fully appreciated, although it didn't have any prices in it, as I well remember, for before making my first Western trip in 1865 I spent two months of my spare time—of which I hadn't a large supply—in putting in lists and discounts, and otherwise making it so I could sell a bill of goods by its aid. The company charged $25.00 for this catalogue, and those who used one to make money never grudged the cost.

Bliven & Mead, who were then the largest jobbers, representing several domestic and foreign manufacturers as well, published a small, but useful catalogue, having miniature illustrations down the sides of the page. As foreign goods were represented in quite a variety, this was a good volume to add to the drummers' kit, and sold many goods. This firm combined later with a large manufacturing company for whom they had been acting as agents, forming the Hart, Bliven & Mead Co., and issuing under that name a much more ambitious catalogue which embraced their now largely augmented stock of goods.

At a later date, Sargent & Co. gave us, I think, the first satisfactory catalogue of their own and other goods, that would be found useful for traveling purposes. This was considered, even as it is to-day, a valuable compendium of Hardware information, and a fine addition to our trade literature, and systematic drumming was made possible by this valuable auxiliary. My first copy of this catalogue was made notable for my own purposes by going over the illustrations with gold paint, by which all the brass parts and articles were made to show the metal; brass bolts and keys for locks, etc., were illuminated in this way, and were easily distinguished from the commoner varieties.

For creating the present standard for perfect catalogue work, I think Wm. J. Ladd, of Sargent & Co. deserves the credit of setting the pace. He is, beyond doubt, the most ambitious compiler of catalogue work in the trade, and is satisfied with nothing short of perfection in his line of work. I have known him to have three separate drawings made of some new production of the Sargent & Co. shops, each with a different view, before he would decide which was the best for purposes of catalogue illustration. Every wood cut passing his inspection is a gem of fine drawing and excellent engraving.

In the personality of the men who posed in the old days as the most successful salesmen, and the men who at the present time have ambitious positions with houses they have for many years been associated with, there would be found a vast difference, and greatly in favor of the present methods for doing business. It is, thank goodness, no longer necessary to be able to stand a goodly supply of "booze" in order to sell goods either at home or "on the road." To-day the few drinkers who are left, are largely in the minority, and the quiet, pains taking, hard-working man who spends his time every day learning something new about his business, thereby increasing his knowledge and enhancing his value, leads in the procession of successful endeavor. The self-respecting salesman is the one who will always have the ear of the firm, and will hold the key to their greatest confidence.

Digitized by Google

I can remember when late in the sixties one of my most successful salesmen died from a too great and excessive indulgence in intoxicants. One of my rising young men, covering only a very limited territory, asked to have that of the other man added to his own. He was the son of a clergyman, and I said: "John, I respect your father too much to place you in the way of such temptation as would beset you if you undertook to handle that man's trade." His reply I will always remember. He said: "I don't believe it will be necessary to adopt the same methods; if you will give it to me, I promise I will never enter a house of questionable resort, nor ever lose my self respect by drinking or carousing with a single customer." I said: "If you will give me your hand on that you shall have the territory." He did so, and kept his word, selling in a few years double the amount in dollars and cents sold by the salesman who shortened his life by dissipation, and from a salary of $1500 a year, he was paid eventually on a commission basis, as much as $4000 annually. He is alive today, doing a successful business on his own account, having filled positions of political preferment. The foundation of his continued success was temperance, not necesarily meaning total abstinence.

The salesmen of the old-time jobbers were, however, nearly all prone to loose drinking habits; for they, instead of traveling through the country making acquaintances and sales, used every evening to frequent the various hotels in search of new arrivals, the hotels, with few exceptions, being located on or below Canal Street. There the boys from other lines of trade would meet, and use reciprocity in acquaintances, shaking the hands of old customers, many of whom made their visit to the city a week's debauch, in which treating, the theatre and kindred amusements, possibly a visit to something new up-town, formed only the preliminaries of the purchase of a season's full supply of goods, running in amount to many thousands of dollars.

Good houses winked at these indulgences, believing the end justified the means, the end being good profits; and fortunes were amassed by the principals, while the subordinates were ruined by too much indulgence.

No longer are any such tactics considered commendable. Goods are sold on their merits. Prices are made that do anything but reek with unearned profit. Quality, style and general fitness have to be consulted in the proper selection of a stock of goods. Tastes have been cultivated by the increasing wealth and culture of the middle classes, and "any old thing" will no longer answer.

In the days to which I more especially make reference, in the selection of articles required in builders' Hardware and other branches of our business, it was apt to be a "Hobson's choice," and the customer bought what the dealer had in stock—it was all right if it filled the bill, and it usually did.

HENRY HOPKINS.

New York, April 1899.

English Cutlery Grinders.

Of the dangers to which the cutlery grinder is exposed much has been written. The terrible results of the constant inhalation of dust compounded of stone and steel arrested and appalled the imagination. The expression of public opinion led to the adoption of the act of 1878 of provisions for the removal of this dust, which were afterward supplemented by the act of 1895. Although it cannot be claimed that grinders' phthisis has been extirpated, it has been largely diminished by the use of ventilating fans. With the example before us of the overthrow of such insidious perils by apparently simple methods, point is given to the dangers that remain behind and to the indefensibility of allowing them free play. It is the more obvious risks which remain uncontrolled; those engendered by the bursting or flying of a huge grindstone running at a speed of from 200 to 300 revolutions per minute, or of a smaller stone running at a higher velocity, which reaches even 1,500 revolutions per minute. That these risks are not imaginary is proved by the annual report of the Chief Inspector of factories for 1897, in which it will be seen that 383 of the accidents that occurred in that year were due to grindstones.—*Fortnightly Review.*

Colors of Gold Metal.

Many people regard gold as of one color; this is a mistake, as pure gold varies considerably. An expert can tell the locality from whence it was derived by its color. The Australian gold is much redder than Californian. Nugget gold (Klondike for instance) is yellow, whereas that from quartz is of a deeper "golden" tint. The reddest gold comes from the Ural mountains. Of course few people see pure gold, for the metal of commerce and even our coins are alloyed. Native metal is much too soft to be used alone, and requires an alloy to enable it to withstand rough wear and tear—*Ironmongers Chronicle* (*Eng.*)

Action of Water on Iron.

Perfectly pure distilled water, free from air (a very rare occurrence) does not act at all upon iron.

Natural spring, lake and river waters act the less the more alkaline and the less free carbonic acid in them.

Water polluted by sewerage containing salt, nitrates and sulphates act very rapidly, especially sulphate of lime causes a rapid action by the double effect of a reduction of the sulphate into sulphide, and subsequent reoxidization into sulphate; it is, therefore, constantly acting as an oxygen carrier from the air upon the iron.

Sea water acts three times as powerful as river water.

Incrustations of carbonate of lime and silica protect the iron.

In porous soils iron rusts as rapidly as in free water.

In clay it rusts very slowly.

Galvanic action set up by human work (trolley lines, telegraph, power transmission) takes place wherever iron touches moisture; hence it takes place within walls, in the soil, even at the roof of buildings, the current finds means of equalizing the pressure and some metal part decomposes the moisture always present at the expense of its own material.—*Exchange.*

A Useful Alloy.

Experiments in the Sibley laboratory at Cornell University have shown that an alloy of two-thirds aluminum and one-third zinc possesses some remarkable qualities. It is white and takes a fine finish, and is equal in strength to good cast iron, but superior to it in elasticity. On the other hand it melts at 800 or 900 degrees Fahrenheit, and can be liquified in a ladle over an open fire. In the liquid form it fills a mold, running into all the small parts much better than brass, but is more brittle than brass. With it small castings can be made without the use of a foundry furnace.—*Exchange.*

An English manufacturer brought out a jug intended to be used as a Christmas present by licensed victuallers. It holds one and a half pints, is neatly decorated, and bears on the face the following quaint legend:

Here's to the man content with his lot,
Contented and thankful for what he has got,
Who never sits sighing for what he has not,
But here's welcome to all in an old Christmas tot.

Almost right in the center of the jug is a drawing of an old fashioned table, on which repose a jug and an ancient looking tot glass—one of the good old sort once popular in England.—*Exchange.*

Always avoid the use of big words; they are sometimes inconvenient to swallow.—*Exchange.*

THE QUESTION OF "TRADE REFORM"—I.

The following interesting paper on "Trade Reform" was read by C. W. Aldrich, beford the recent meeting of the Iowa Retail Hardware Dealers' Association:

I am deeply sensitive of the honor you do me, in inviting me to come before your convention on this occasion and contribute my mite toward the co-operative work, the upbuilding of retail Hardware trading. I can best prove my gratitude toward you by, in so far as I am able to do, aiding you in the work of building a strong organization. In addressing you upon this occasion whatever I may say will be perhaps largely general, from manuscript and in the utmost candor and frankness of which I may be the master.

I belong to that school of Americans who believe in the freedom of thought, freedom of speech and freedom of action, which trespasses upon the rights of no one. I believe in the purity of Americanism being engrafted into every part of our country's organism, whether of business, politics or religion. So believing, so thinking, so reasoning, it will be systems rather than things themselves that I shall attack. It will not be an individual or the business, but the manner of conducting the business, that I shall assail.

The questions that have brought you together in such goodly numbers from all sections of your State, are questions of great moment to the business world, and to you as members of that world. For several years these questions have to me been subjects of thought. As a commercial traveler upon the road much of the time for the past fifteen years, many incidents have arisen to fix these things in my mind, and from time to time, I have seen the evils of which you complain grow from little to big, from bad to worse.

Some years ago when I began in the leisure moments and intervals of business to discuss these questions with dealers, I found the trade generally aware of the facts, conditions and evils that exist, but they seemed powerless to act, and rising to the dignity of the occasion would ask, "What are you going to do about it?" "Organize! organize! my dear sirs, and give open, honest battle." "Yes, but you can never organize the retail trade; those little petty jealousies ever fermenting are liable to crop out among members, and where is your organization then, that should be your bulwark of strength?"

To ——— with all your little petty jealousies, put them behind you, organize with your shibboleth fidelity to the cause of trade reform, and in a solid phalanx press back the enemy that is bearing hard down upon the citadel of honest, fair, commercial dealing. It has been no argument to convince many dealers of the justice of such a movement, but that thief of time, procrastination, in hundreds of cases holds the dealer captive, and the great octopus is drawing nearer and nearer the gates.

RETAIL TRADING THREATENED.

Round about the citadel of retail trading, creeping nearer and nearer, ever comes the threatening monster that must be driven back by the united front of the retail dealers ere they are swept from the sea of action into the gulf of involuntary bankruptcy, and while they plead for a four dollar a week situation, their little ones cry of hunger. Gentlemen, this is no fairy tale, but can be verified in every large city where dwells the Department Store. Thousands of small prosperous firms have been wiped out of existence as business men, and their families brought to penury. There is no fancy about these things, gentlemen, nothing but the cold, naked facts, and as you press them home to yourselves, your business, and think of those dependent upon you, wife, children, mother or father, 'tis like cold steel to the heart.

This country is the fairest and brightest on earth. Our cosmopolitan people acknowledge no superior people in the world. In wealth, natural advantages, endless resources, we are peer of peers. Give our people, our tradesmen, equal advantages under the law, and there is no country on God's footstool where man can work out his own salvation and carve his way to an honest livelihood with better results than in this our America.

There is hardly an American school boy who is not conversant with the facts that caused the thirteen colonies to organize and fight to death. It was trade oppression, oppression of the mother country, trade oppression forced by the concentrated wealth of the old world that led to Lexington, Yorktown and a thousand battle fields where the rich, warm blood was drank up by the virgin soil. It is not that sort of trade oppression that confronts us now, or we would up and at them with shotted guns. For the last ten years in this country we have seen the rapid centralization of wealth. In that time combines, consolidations and trusts have grown to an enormous extent. Through them, large businesses have been developed and smaller ones have been wiped out of existence, and the small business concerns no longer hold a tenure of life warranting an honest livelihood. These are the things you must contend with. These are the things you, as retail business men, seek to correct. Seek to correct by the establishment of better business methods. Your work is almost wholly an educational one. You do not seek by force to compel the doing of certain things; you are not arbitrarily trying to enforce certain edicts, but by education, by the argument of numbers, by numerical strength of argument you seek to reform the abuses without encroaching upon the rights of anyone.

Gentlemen, tell me, or rather tell me not, there is no cause for alarm, that it is but a mere fancy. When the State Legislatures of such great states as Illinois and Minnesota concern themselves about the growing evils of department store trading and such a great state as Wisconsin turns her attention to legislating against the evils of prison vs. free skilled labor, tell me not, I say, that it is but a false alarm. The discussion is only begun; 'tis but the first brush of the picket line.

In considering the question of trade reform we must first consider the prime factors in trade as three—Manufacturing, Wholesaling and Retailing. No one of these factors is to blame for all the ills, upon no single one can you lodge all the responsibility, neither can it be expected any one of the factors can do or should do all the reforming. Each one has a part to do, each one has a duty to perform, and only by a united co-operative work can the problem be solved and trade methods corrected. Somehow fate has decreed that the retailer should begin the initiatory work, not that he is the greatest offender, or that it is his province to do so, but because he is the greatest sufferer; feels more keenly the burden which falls heavier and heavier year by year upon his legitimate earnings, making it less and less inviting to stand at the consumer's doorway holding stocks for his inspection and possible purchase.

So much for the several factors in trade. What of the

Digitized by Google

offenses, what of the remedies, what of correction. Fifty years is not such a long period of time; many of you can perhaps span it with your memories, and to those whose years will not permit, our history is so fresh they, even, can comprehend the changes in the commercial life of this country within the last half century. Fifty years ago, at peace with all the world, under normal conditions we were steadily but solidly building the greatest country of all the earth. In an evil hour came internecine strife and war, war begat want, want begat inventive genius and all begat expansion. In the midst of calamities and trouble we began and prosecuted the most rapid development the world has ever known.

RACE FOR EXPANSION.

We have, I believe, however, passed our greatest years of expansion and development. Never again, in our lives or the lives of generations to follow us, will be seen such rapid strides in development, probably as was made from 1880 to about 1890. It was then a mad, eager, breathless race of expansion and development. In that time more than a million emigrants sought our shores, quite two millions of people emigrated from the East to the West, building new homes, villages, towns and cities and with such development and expansion came constantly increasing values.

The primary cause of our great commercial prosperity then, was the rapid peopling of the West. There was then such an active demand for raw material and manufactured products, as to give our entire commercial being a buoyant, enterprising, speculative tone. Money making was then an easy matter to those engaged in mercantile pursuits. The agriculturist, also, accumulated wealth. It was not necessary then, as now, that he who engaged in commercial trading should be an expert; nor was it then necessary to throw safeguards around business transactions, as under the then expanding and growing conditions, he who was fairly active and attentive to business was usually successful, because market prices were in the ascendency. Reparation for the wasteful war of the sixties went on to its completion, and with its completion came a reaction from our too rapid development of expansion. The great army necessary for the exigencies of war and of development become an idle horde. Our home productions were many times greater than our consumption. Foreign demand for our products greatly lessened, development and home productions abroad closed their market against us, and we awoke from a period of the greatest prosperity and industrial development the world ever knew to face one of depression and a more moderate pace for future business advancement.

From a period of hand labor and hand production, we, before the thought of time, emerged into a period of large and cheapened machinery productions, where a single little machine produces in less time the represented labor of fifty or a hundred men. This changed condition of affairs necessitated retrenchment, reforms, lessened prices for our products, because of lessened demands, lessened productions, because of already overcrowded markets, hence lessened marginal profits, because of enforced economy in living. Even mother earth has not at all times been called upon for her most bounteous yields.

Fifty years ago your own proud state was a mere infant in swaddling clothes. Your sister state on the east with its mighty Chicago, the greatest city of this Union, had not then been builded, and the great West was then a wide expanse of unbroken ground, unreclaimed. The mighty East was in the same time developed and strengthened by a vigorous growth of the West. Her towns and villages grew to great cities and large centers of manufacturing industry, each great plant a mine of industry and of wealth.

No matter what the product, expansion demanded the goods. The limit reached, the demand lessened, and then came a crash, followed by several years of depression from which we are slowly recovering. With increased output came increased strife among manufacturers to dispose of products, then also came renewed vigor to minimize cost of production. Not only was a few cents figured upon, but even fractions of one per cent. have been counted in the cost column. Every new device, every new machine possible has been brought to the aid of a lessening of cost and when those measures offered nothing more, then adulterants came into use; every one of these things has been a robbery upon labor. As labor earned less so did it expend less. Again, as conditions cut off demands you have seen the larger manufacturers and capitalists organizing combines and trusts to control output and manipulate prices, and again the competitive power is forced harder and harder upon the retailer.

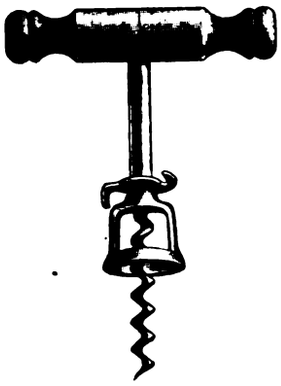
Fifty years ago the wealth of this country was more evenly distributed, there were then few millionaires and no multi-millionaires. To-day the wealth is largely concentrated, there are many millionaires and not a few multi-millionaires. One of our United States senators is authority for the statement that fifty men can block every industry, stop every wheel, paralyze all business. Another ex-senator is authority for the statement that sixteen million men own and control three-quarters of all the wealth. Such, seemingly, are conditions to-day.

SOME COMMERCIAL OFFENSES.

Then what is the manufacturer's offense? That of forcing competition to a ruinous point. Again you may safely charge many manufacturers with unloading surplus stocks upon the catalogue, jobber and department stores at cost or nearly absolute cost prices, thus greatly intensifying competition. What of the jobber or wholesaler? He had trailed along after the manufacturer, yielding up to his influences and aiding in the bearing processes. What of yourselves, the retailers? You have caught the infective spirit and beaten down still further the marginal scale until many of your co-traders have yielded up to their last quarter, if the hateful assignee has left as much as a quarter out of the assets. Gentlemen, you, too, are largely traversing the competitive tract.

The manufacturer and wholesaler are to-day engaged in building trusts and rearing a hydra-headed monster tenfold more threatening to our people, their cause and their Americanism than any specious political monstrosity ever yet conceived or dreamed of. You gentlemen stand agape, unmoved, inactive, because no one points the way. Your mission is neither an idle nor a curious one. It is not your province to act alone for your salvation as business men, but to act for all the people, for our country, her highest aims and greatest ambitions. These are the conditions that now confront you, the retail business men of to-day, and it is your mission to so shape the commercial affairs as to continue a forward advancement. To no class of people is delegated greater or more important functions of meeting these conditions and guiding the commercial craft through troubled waters to a safe mooring, than to the retail merchants.

During the years of our too rapid development, large industries were built up, and smaller ones begun. Under various forms of improved machinery and man's cunning, our manufactured products multiplied beyond our requirements, until we have to-day largely a congested market, crowded to a limit beyond our consumption. This state of affairs has led to scheming and all forms of cunning to keep our factories and their enormous product disseminated. Adulteration of food products, deceptive and false advertising, false schemes of all sorts have been brought to bear in the pull for business. Selfishness, avarice and greed have largely governed trading.



[*Concluded in our next.*]

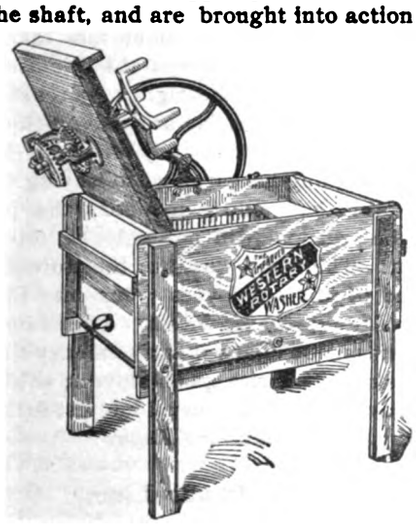
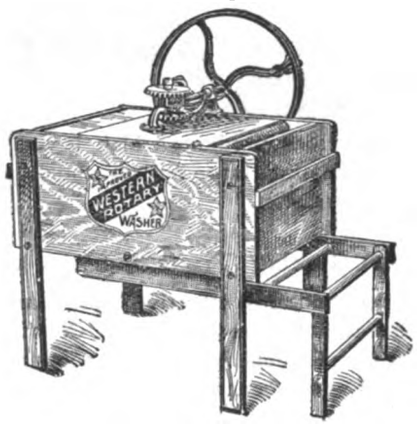
NEW GOODS AND SPECIALTIES.

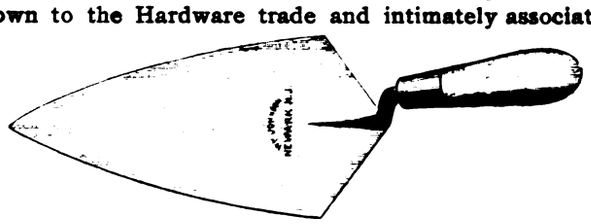


Hand Power Combination Corkscrew.

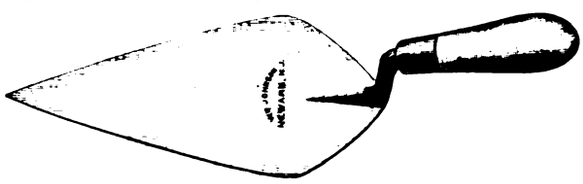


The Williamson W. N. Co., Newark, N. J., are putting upon the market their new Hand Power Combination Corkscrew, as shown by accompanying engraving. This corkscrew is virtually four articles combined in one, as it removes crowns, Baltimore seals, breaks the wires and extracts the corks. This new cork extractor is made with the wire coil as well as the forged worm-screw, all parts being heavily nickel-plated except the handle, which is a fancy turned handle, either box or rosewood, as preferred. Each dozen corkscrews are accompanied by a large and attractive show card, demonstrating the mode of operation.

Improved Rotary Washer.

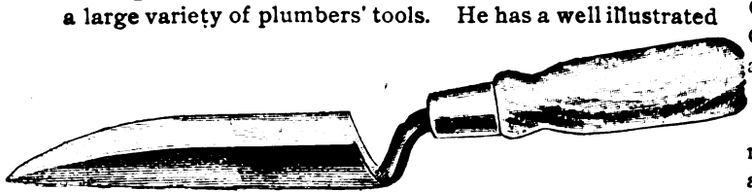


The Anthony Wayne Mfg. Co., Ft. Wayne, Ind., and St. Louis, Mo., have just placed on the market their new Improved Rotary Washer, the most essential improvements of which, over their last year's machine, consist, as they show: "First: In the extremely simple construction of the reversing gear, the alternating rotary motion of the pin wheel being imparted from a pawl working in an automatic switch, thereby causing the driving clutch to engage alternately, either the lower or upper pinion, both of which run loose on the shaft, and are brought into action by the upward and downward movement of the clutch. The mechanism is so simple that it cannot get out of order. Second: The gearing is so constructed that it can be turned either forward or backward, and the machine will wash no matter which way the hand wheel is turned. This will stop all breakages of parts of the gear and will reduce the same to a minimum. Third: When the machine is open, the hand wheel will detach from the gearing and stay on the suds box. This is by far the greatest improvement on this machine, and is not to be found on any other machine of similar construction. Our letters patent especially cover this point, and the claims are so broad as to prevent any one from using the same without infringing on our patents. By this improvement, not only the lift of the heavy hand wheel is dispensed with, but it will also prevent the breakage of the hinges on the round and the splitting of the lid on the square machines, which will surely happen on the old style now on the market if the lid is accidentally dropped, as the gearing when detached from the hand wheel does not weigh more than that now on the Western Washer. However, if not detached, the weight is nearly 30 pounds. Fourth: All of our Rotary Washers are equipped with the galvanized iron pin wheel, for which we claim that it will neither split, rust nor lose the pins, for these are cast intregal with the wheel, are smoother than wood pins and are therefore less liable to injure the clothes, and on account of its weight it will always engage the clothes and wash them no matter whether the machine is loaded to its full capacity or whether only a few pieces are to be washed. The wood pin wheel which will swim on top of the water, will not wash successfully unless the machine is full of clothes." The Anthony Wayne Mfg. Co., who are the inventors of this machine, solicit inquiries from jobbers and dealers in regard to prices and terms on the same.



William Johnson's Trowels.

The name of William Johnson, Newark, N. J., has been known to the Hardware trade and intimately associated with the manufacture of this important product for nearly seventy years; the name has in consequence attained a reputation for high grade goods which has become a valuable possession, as scarcely a stock of Hardware in the country but has at sometime recognized the advantages of dealing in a make of goods so well established. The well-known manufacturer, whose factory for years has been located at the Hedenberg Works in the above city, makes Trowels in all their various forms and varieties, including brick, plas-



Digitized by Google

tering, painting, corner and garden trowels. They are made from the best quality of steel suitable for the purpose, and are hammer forged and well finished in every respect.

William Johnson also makes a general line of carpenters' and other mechanics' tools and Hardware specialties, including a fine assortment of screw-drivers, and in addition a large variety of plumbers' tools. He has a well illustrated

catalogue of his various products which is well worth the notice and attention of all large buyers who do not already have it in their possession.

A Taking Trade Mark.

One of the best and most effective trade-marks that can be found is that used by the Covert Mfg. Co. of West Troy, N. Y. All tags and labels used in connection with their extensive line of goods bear the following trade mark:

The trade-mark speaks for itself, and is everywhere known as a representation of a first-class line of goods.

High Priced Wood.

So great has been the demand for lignum vitæ, the wood from which the bowling balls are made, that its price has steadily advanced, until it approaches a Klondike magnitude. The weight and hardness of the wood fit it for hard usage, yet the lot of the manufacturer of bowling balls is not a happy one. A famous turner of bowling balls in New York talks very interestingly of the details of his business. "All lignum vitæ," he says, "is imported from the West Indies in the log. The logs run from eighteen inches to six feet in diameter, but bowling ball manufacturers try to get those that will give about nine or ten inches of sound wood from which to turn the ball. The wood is bought by the pound, and is like buying a pig in a poke, for the logs often contain imperfections which compel them to be thrown aside. The large logs are apt to be cracked and shaky. The market is short, so we have to take what we can get.

"When a ball is to be made the log is selected and a suitable length cut off. It is roughly turned into a round shape, then put into a turning machine, with the grain of the heart turning between two centers about which the ball is turned. Two discs, one swinging on the other, guide the knife, which cuts off a thin shaving from one side of the ball until it is exactly half round. Then the other half is turned, leaving only two pieces close to the centers of the lathe.

"As soon as the ball comes out of the machine it has to be covered with shellac or it would crack in drying. The shellac keeps the moisture in, so that it escapes slowly and no portion of the ball dries faster than the other.

"Some bowlers have the finger holes lined with cork to prevent slipping or blistering of the skin in long, hard matches. The last operation is polishing the ball, which is done with shellac, rubbed down by hand until the surface is perfectly smooth. There seems to be no standard in making bowling balls, except that they must be perfectly round and evenly balanced, so that they will roll in a straight line. Every bowler has his own idea on the subject, and unless a ball includes these ideas he is not satisfied with it."—*Sporting Goods Gazette.*

How Aluminum is Made.

The oxide which is obtained from bauxite quarried by the company in Georgia, is fused with cryolite in pots of boiler iron lined with carbon. An electric current is passed through these long series of pots, and the result is precisely similar to what it was when Hall sent the seven-cell Grove battery current through his two-inch crucible in Oberlin—the melted aluminum collects on the carbon negative electrode, and, as already stated, the quantity thus collected daily is measured in tons. Continually, night and day, without cessation, this operation proceeds. The raw material is fed in as required; the product is removed and the carbon is renewed. The waste of the process is said to be so slight as hardly to be an element of calculation. Then comes the casting into ingots and bars, the rolling into rods and wire. Previous to the opening of the Pittsburg works, practically no pure metal was made in the United States. The market price of what was imported had not been lower than $5 a pound in New York. The American manufacturers were soon able to place the pure metal on the market at fifty cents a pound, and an important reduction from this price has lately been made. Besides the original works, near Pittsburg, which have been operated continuously since November, 1888, two plants at Niagara Falls are operated by the same company and the total productive capacity of the three plants is more than 10,000 pounds of aluminum a day. This output nearly equals the combined daily capacity of all the aluminum works of Europe together.—*Review of Reviews.*

Employees as Shareholders.

Readers of the *Manufacturers' Record* are aware of the plan of the Illinois Central to increase the interest of its employees in the company by giving them an opportunity to take stock. A number of employees have been stockholders for several years, and it is stated that shares for which they paid $88 a few years ago are now worth between $114 and $116. In other words they could sell their stock to-day at over 27 per cent. advance if they desire. In addition to this they have been receiving dividends ranging from 4 to 5 per cent., which is a higher rate than many of the savings banks pay. The plan of the Illinois Central is this: An employee is given the right to purchase say five shares at $100 each, and then lay aside so much of his salary each month with which to pay for it. If he decides that he prefers handling his earnings to leaving them with the company, all he has to do is to notify the proper authorities and the principal will not only be returned, but interest with it. The result was that the more saving and better balanced of the employees went into the scheme readily and are highly pleased with it. The example set by the Illinois Central Company has a tendency to increase its harmonious relations with its employees, as all who are shareholders have a more than usual interest in the welfare of the company.—*Manufacturers' Record.*

A Long Plumb Line.

Probably the longest plumb line in existence is that suspended in the Washington monument, which has a free swing of more than 510 feet. It is of hard drawn copper wire, 3-64 inch in diameter, and is suspended, for protection, in a galvanized iron pipe. The wire is located in a plane cutting the center of gravity of the monument, which is 174 feet 10½ inches above the door sill. The plummet was set June 12, 1887, with the top end of the wire fastened to an adjustable brass screw in an I beam about 10 feet from the west wall.—*Chattanooga Tradesman.*

NEW ENGLAND HARDWARE ASSOCIATION.

The regular monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, on Wednesday, April 12th. President Wm. D. Parlin, of Natick, Mass., who was elected at the March meeting, assumed his new duties, and showed by his forceful manner, and tact in guiding the business of the evening, that the Association was to be congratulated upon its choice of presiding officer for the coming year.

Despite the unfavorable weather conditions, the attendance was larger than usual, this being due to the lively interest taken by the members in the question of future policy, which has been under consideration for the past two months. A strong and rising market has, for that time, strongly impressed the Association with the necessity of an active, aggressive policy, in order to increase the membership and strengthen their position, and with this end in view, some action has already been taken in order to feel the pulse of the trade. The results will be found in the reports and speeches of the different members which follow.

After singing the National Anthem, and a grace by former President Samuel H. Thompson, the members and their guests sat down to dinner at 5.15 P. M., the hour being changed to allow more time for business discussion.

After the repast, President Parlin called the meeting to order, and in well-chosen words thanked the Association for the honor accorded him by his election, and reviewed the past and present position of the organization, as well as glancing somewhat into the future that lay before it. President Parlin said:

THE PRESIDENT'S ADDRESS.

In entering upon the duties of president of this association I wish first of all to thank you for the honor you have conferred upon me. I hope your confidence has not been misplaced. Your assuarance of hearty co-operation in its duties and responsibilities has been given, and with that understanding I accept the office. Little can be accomplished without this co-operation. The association is organized for our mutual good. All of us must share its labors or we fail to secure its best results.

We meet here to get acquainted with each other, to plan movements which shall help us in trade; to foster commercial integrity, to discourage excessive, unfair competition, stop jealousy and remove by concerted action all evils and customs among us that are against sound business principles. These are objects worthy of our great efforts.

To-night the special subject for our deliberation is how best to extend these principles so that every Hardware dealer in New England shall be brought under their influence. I think we all believe in some local combination that by frequent meetings shall bring local competitors in social touch one with another, feeling sure that by this means amicable relations would soon be established between us. This friendliness would soon take care of differences. How far the price question will be brought up is a matter for your discussion. How much combination it is best to encourage is also for you to decide. Combinations and trusts are not popular among the masses, though there is less antagonism against them now than formerly. I see that prominent labor leaders are growing more and more to favor them. They claim, not without reason, that soon law will step in and the "wasted energies" of competition, saved by combination, will be made to advance price of labor.

In the business world, however, to-day there is almost a mania for combination. Everything seems ripe for it. Trusts in everything. Consolidation everywhere. We, as retail Hardware dealers, shall be very unwise if we do not profit by this business drift. We need not placard it or flaunt it before the public. They will find out fast enough all we want them to know. They will as a mass in the end be better pleased and easier to sell to when they discover prices are steady and there is nothing to gain by searching the whole market for bottom figures. We ourselves care very little what we have to pay for goods provided the other fellow cannot get them at lower prices. Another strong reason why this association should get in its work now is that the great advance in prices gives us the opportunity to adjust them so as to leave us a fair margin of profit. Our customers expect a change, and we shall be very foolish to throw away this fine opportunity to make up for past years of shrinkage. We can do this if the other fellow can be brought into our organization. How best to do this is for you to decide.

We need also a strong body that can have influence in legislation, so that proper laws can be made and those already made enforced for our own good. We want to say to manufacturers and jobbers, "Keep out of retail business." We want to consult with and advise each other so as to weed out undesirable credits. There are a thousand things that need adjusting, and nothing more than good fellowship with each other. It will require charity and forbearance. Differences seemingly irreconcilable will come to the front. Misunderstandings will crop out, but if we discuss these points of controversy as between man and man, with charity for each other, the differences will disappear and a kind and quality of dividends will result which shall satisfy our every expectation.

The President's speech was listened to with great attention, and met with hearty applause at its conclusion.

The minutes of the preceding meeting were then read by Secretary Farless and were approved.

After taking this vote, the President stated that after hearing of his election, he had taken the first train to Canada. There he learned of ex-President Loomis' remarks, and recognized that this Association had a future before it, and came back. He had written several letters to prominent merchants throughout New England, and was most gratified by the replies. A letter from a well-known firm in Pittsfield, Mass., was read, in which the writer expressed the hearty support of all dealers in that locality. It spoke of the local Association, which had existed there for five years with the most beneficial results. At its inception the members had agreed not to believe all the reports of cut prices they heard, but to use the telephone freely. It was soon found that "there were some liars outside of the Hardware trade." It was found that there was not only an increase of profits, but there was also a much better feeling among their customers. The letter was signed by Henry R. Pierson, of the Pierson Hardware Co., and elicited much approval.

The president then called upon Hiram G. Janvrin, as chairman of a committee appointed to investigate the possibility of forming local organizations to affiliate under the parent one.

Mr. Janvrin stated that, after discussing the question, the committee had decided, as a starter, to send out a circular letter asking the recipients for an expression of opinion on the possibility of a local organization in their town, and the desirability of their being represented, either in a

Digitized by Google

body or by delegates, with this Association. This had been done a week before, and while it was too soon to look for results, he had already received several letters expressing hearty approval of the idea, and stating that such organizations were much needed. Mr. Janvrin continued that the whole matter hinged on prices. It was not wanted, nor asked, that these should be fixed high, but that they should be uniform in each competitive circle, and at the same time show a fair profit. This had not been done for several years, and he regarded it as entirely our own fault. The committee had decided that if the circular letter was unsuccessful, they would secure the services of some one qualified to go among the trade and work the matter up; the expenses to be paid from the funds of the Association. He now questioned the right of the committee to so act, and wished to put a motion to the effect that such agent should be appointed, and his expenses so paid. The motion was seconded and the question was thrown open for discussion.

D. Fletcher Barber, before taking up the matter under consideration, wished to call the attention of the members to the fact that their thanks were due to those who had kindly consented to furnish the entertainment part of the evening, among whom were Miss Madge Parks, Hugh Campbell and C. R. Halstrom. Mr. Barber then stated that Mr. Colton, another member of the Committee, had personally interviewed several dealers in other towns and had found them most favorably inclined to local organization and affiliation with this Association. He read a letter from the president of the Springfield Association expressing approval of the idea, and another from a former president to the same effect, and asking for the plan of affiliation. Mr. Barber continued that he deemed it necessary to form another association in Boston, of a purely local character, having a small entrance fee, and meeting often enough to keep pace with market changes. This was because he believed that the parent Association should not attempt to legislate prices generally, but should leave such local one to do that for their own locality. However, he believed that the head one should be notified of all local prices and changes and keep them on file. Other benefits to be received were the general black-list, with the names of all delinquent debtors; the ability of such a strong organization to deal with unjust competition from manufacturers, and the readiness with which the trade generally could be notified of fraudulent schemes. He believed that personal solicitation would be necessary, and that great tact would be necessary in order to overcome the prejudice and personal feeling existing in some localities.

The president then introduced Frank E. Thompson, of the editorial department of the *Iron Age*, whose visit was due to the attitude of aggression taken by the Association.

Mr. Thompson spoke of the hearty sympathy of the paper he represented with association work, and felt that their readers would profit by the discussion now in progress. He referred to the work being done in this line in the West. The difficulties to be contended with there were somewhat different. Department stores, catalogue houses and range peddlers were among these; while freight was also an important item. In the latter respect, it was a common occurrence for the dealers located along a line of railroad to order in combination by carload lots, and have the goods delivered as required, by side tracking the car at each station. He felt that local associations would strengthen both them and the parent organization.

Mr. Thompson, of Lowell, Mass., was the next speaker. He said he hoped the members would not consider this a "Thompson Combination." In listening to the discussion, he had found that they were simply getting back to the fundamental principles which attended the inception of the Association. In the constitution he found the following:

"The New England Hardware Dealers' Association is intended to include in its membership all responsible Hardware dealers, both wholesale and retail, throughout the New England States.

"The trade have long recognized the necessity of an organization and the need of closer social and business relations, realizing that much unjust competition arises from misunderstandings and imaginations therefrom; also having for its object the protection of honest dealers, and guarding them against fraud. These are the principles of the Association."

The trend of the letters received, and read, was a repetition of this sentiment. He felt that the Pierson letter, before referred to, should be printed and sent to the whole trade. He could report marked progress in his own town. Six weeks ago, the trade there was very far apart, and each felt that the other fellow was cutting prices. When the rise in nails occurred, a little use of the telephone resulted in a meeting, at which every house was represented. An organization was immediately formed, and every one was pleased with the result. Nine-tenths of trade misunderstanding was simply imagination, and the only way to overcome this was by getting together and facing the questions like men.

Mr. Whitcomb, of Beverly, Mass., followed, and expressed his great interest in associations, though not at present a member. He considered this the right time to make the endeavor to enlarge. The spirit of combination was in the air. He referred to the trouble given to the dealers in small towns by the representatives of the city agencies, who sell direct to contractors at a profit that could not be afforded by the former. He knew of cases where the price was an advance of only 2½ per cent. on the cost. He was thoroughly in favor of the formation of local associations, and considered it an easy task now, as compared to six months ago.

George W. Burditt followed the last speaker. He had noticed that in this Association, all the talking had to be done by the bald headed or grey bearded members. He wanted to see the younger element come to the front. He was in favor of the movement to expand, and thought that many of the present members would be willing to run around in a radius of twenty miles or so, and do a good deal of missionary work themselves. He, himself, would be glad to do what he could.

Charles O. Tookey, Chelsea, Mass., stated that his local Association had six members, but he was the only one a member of this one. He was using his efforts to bring them all in.

Mr. Chamberlin, of Roxbury, referred to the attitude of manufacturers' agents, whose small offices and low expenses enabled them to undersell the dealer, who was compelled to have extensive premises, a large corps of clerks and other expenses. He felt that confidence was needed. In this connection he was reminded of the mother and daughter, who, while rambling through the fields, were suddenly faced by an aggressive looking Billy-goat. The daughter, with a feminine scream, found shelter behind her mother. The latter counselled calmness and confidence.

"Remember, my child," she said, "we are Christian Scientists."

"Yes, mother," assented the trembling daughter, "but the goat don't know it."

In the present case it was a question of impressing the "goat" with our confidence.

Ex-President Loomis then brought up the question as to whether an official resolve had been made to make the Association a purely business one, or to allow it to continue more on a social basis. Although the question had been up for discussion several times, he found nothing definite on record. He also spoke of the action of the nail manufacturers in making the same price to retailers and

Digitized by Google

consumers, and suggested that some action be taken in the matter.

The motion directing the expenditure of certain sums for the purpose of fostering local associations, was then put, and after some discussion, was passed.

In regard to the business and social question S. D. Balkan suggested that every member be requested to communicate his views to the secretary.

Mr. Janvrin suggested that a happy medium could be found by making it both social and business, and moved that the secretary be instructed to notify all members that their presence was urgently requested at the next meeting. This was carried.

After announcing the entertainment committee for the next meeting, consisting of Austin H. Decatur, Calvin M. Nichols and James A. Cook, the president adjourned the meeting.

FRED A. CATON.

Boston, April, 1899.

Russell & Erwin Mfg. Co.'s New Catalogue.

The Russell & Erwin Mfg. Co., New Britain, Conn., and No. 43 Chambers street, New York, have recently issued their new and complete catalogue for 1899, which forms volume 8 of their series of important catalogues. It forms a complete portable volume of over 1,000 pages, copiously illustrated in all the branches of the Hardware business.

The volume is increased to 1,100 pages by the regular, and very complete numerical indexes, which are features of its careful construction; and the addition of a "fine goods supplement," in which by the aid of gelatine print illustrations made direct from goods, all their artistic designs in high grade builders' Hardware are exhibited. In this supplement are shown thirty-five various styles of their finer grades of cast bronze Hardware, arranged in chronological order as far as possible, and shown in a method of classification by designs, of all the various articles of one pattern on a page. This enables a ready reference to each special design, and is admirably arranged.

When it is realized that this leading branch of their extensive business has associated with its proper distribution an assortment of finishes which on bronze Hardware alone embraces thirty-seven varieties, it is evident the difficulties surrounding the manufacture of builders' Hardware of the present day must be constantly presenting new problems for solution.

In the arrangement of this catalogue more than the usual amount of care has been given, and more original methods have been adopted than in any previous catalogue issued by this representative company. The volume has been compactly made and the goods well displayed by the use of half-size illustrations, instead of the full and three-quarter size cuts which were adopted in previous issues. The endeavor has been made to increase the ability of the work by making each page as complete, in a measure, as possible, no single large sized cuts of the least important lines being allowed a whole page for illustration; the smaller illustrations permit of four times the amount of information to be given, enabling its contents to be digested with infinitely greater ease.

In the Builders' Hardware department, which is naturally the most important, detailed information is conveyed in tabular form wherever possible, and no architect need go astray as to the size of lock fronts, distances from the center of hub to keyholes, and the caution necessary in every instance to keep the desired finish constantly before them. For the benefit of the trade, case quantities and weights are specified on all such goods as are usually purchased in large quantities.

The adoption of a plan in the Fine Goods Supplement, by which all corresponding goods have the same arbitrary number, which has now for the first time been adopted by this company, will, we think, simplify matters very largely in the dealer's interest. When the design and finish are decided upon, they are then the most important parts of the order, and will always have to be kept in view; as no matter what design is selected, the number of the 4-inch mortise lock will be 940; the 5-inch will be 950, and the other locks and escutcheons have arbitrary numbers as well. The memorizing of the small set of numbers covering the line shown, is a very easy matter, and if designs are not too numerous in the dealer's stock, will be attended by fewer mistakes than under the older methods. This system of numbering is made to include store doorhandles on all the design goods.

The statement is made throughout the catalogue, wherever any chance for possible misunderstanding is evident, that the goods are either wrought or cast bronze. Care in doing this was not so much of a feature in catalogues of five or six years ago. The standard finishes on goods for ornamental bronze and bronze-plated is No. 3 finish, having a dark background and light polished bronze relief; and the old No. 11 finish, polished bronze, natural color, is regular for plain goods.

In addition to the extended line of standard Padlocks, which have been an important item in the manufactures of this company, is also shown a line of wrought metal padlocks which have been among their more recent productions.

That portion of the catalogue beginning with page 517 is devoted to the large line of jobbing goods dealt in by the Russell & Erwin Mfg. Co., for some of which, like Swan's Mechanics' Tools, they have the exclusive agency.

One of the most interesting and original features of this catalogue to the individual who has made a study of the evolution in finer grades of builders' Hardware, is the short treatise which accompanies the illustrated page of each special design; conveying in an extremely readable manner the features of the school to which it belongs, the relation of that school to others which succeeded it, and in some cases the motive which inspired the design. The novelty of giving what might be called a short history of art, exemplified in mechanical execution, will be fully appreciated by those who make a proper study of a subject of so much interest.

Catalogues may be obtained through any of the Russell & Erwin Mfg. Co.'s warehouses in New York, Philadelphia, Baltimore and London, from their factories at New Britain, Conn., or Dayton, Ohio, or from their sample offices in Chicago or Boston, the last having only recently been opened at No. 814 Exchange Building.

Merchant & Co., Inc., Philadelphia, New York and Chicago, are unique to-day in their relations to the Hardware trade of this country. This company represent more branches which contribute to the stock in Hardware trade than any other of which we know. They are manufacturers, importers and jobbers of every class of tin and terne plates. They do a large business in "Star" ventilators and metal tiles and shingles, and they also operate very extensive smelting works, where they make all grades of solders and Babbitt metals. It is very satisfactory for a Hardware dealer to be able to establish good trade relations with a firm of this character, and secure many classes of supplies from one source. The company are always glad to hear from dealers, and their reputation has been so firmly established for something over a quarter of a century for general integrity and high grade goods that dealers know they are in safe hands when they buy from this concern.

A tutor who tooted the flute,
Tried to teach two young tooters to toot.
Said the two to the tutor,
Is it harder to toot, or
To tutor two tooters to toot?—*Life.*

MISSOURI HARDWAREMEN ORGANIZE.

A movement has been on foot for some time for the organization of the retail Hardware dealers of Missouri into an association, and the final steps toward carrying this laudable intention into effect were taken on the 11th and 12th of April, at the Lindell Hotel, St. Louis. There was an encouraging representation of the dealers of the State present, the firms represented being as follows:

H. W. Quernheim, Mound City Hardware Co., St. Louis.
F. A. Kansteiner, St. Louis.
Witte & Enright, St. Louis.
Chas. Wendemuth, St. Louis.
G. A. Pauly & Co., St. Louis.
Charles Loepfe, St. Louis.
C. E. Koenig, St. Louis.
L D. Groom, Richland.
Wm. Potts, Salisbury.
J. F. Burge, St. James.
Frank T. Salomo, Salomo-Biedermann Hardware Co., St. Louis.
A. F. Geschwindner, St. Louis.
J. F. Bannon & Co., St. Louis.
John Schmitt, St. Louis.
Emil Wachter & Son, St. Louis.
Steinmeyer Hardware Co., St. Louis.
Boehl Hardware Co., St. Louis.
A. H. Gruendler, St. Louis.
W. E. Burghauser, W. E. Burghauser & Co., Fulton.
Wm. Kansteiner, Hannibal.
P. E. Harney, Joplin Hardware Co., Joplin.
Jas. T. Jackson, Tom Ray Co., Kansas City.
E. A. Demeter, Macon.
Ben Morris, Memphis.
Wm. Sodemann, Concordia.
J. Vogt & Co., Concordia.
Norris Hardware Co., Kansas City.
Halyard Hardware Co., Joplin.
Samuel Ulen, Meiler, Ulen & Carter, Dexter.
T. A. Medley, McElyea & Medley, Campbell.
M. C. Post, Brookfield.
C. A. Easterday, Easterday & Pemberton, Braymer.
J. W. Poland, Poland & Crouch, Carrollton.
E. Thomas, Trenton.
Frank Trau, Holstein.
W. & W. J. Rumpel, Weston.
Bethany Hardware Co., Bethany.
Parrish & Erickson Hardware Co., St. Joseph.
H. J. Dickbrader, Washington.
Cunningham & Hamel, De Soto.
Hoppe-Taylor Hardware Co , Chillicothe.
Von Der Au-Cluss Hardware & Cornice Co., St. Louis.
Fred. S. Bolte, Bolte Stove Co., St. Louis.
R. L. Hixon, Hixon Hardware Co., Hannibal.
Joseph Nelson, Winfield.
Taylor Frier, Frier-Jacquim Hardware Co., Louisiana.
R. D. Quisenberry, Nauerth & Quisenberry, Slater.
C. P. Bodine, Shelbina.
J. B. Best, Best Bros. Hardware Co., Palmyra.
J. M. Kenyon, Maitland.
J. M. French, Skidmore.
L. K. Jones, E. Jones & Son, La Belle.
F. S. Briggs, E. Skeeves & Co., Neosho.
Ira L. Russell, D. C. Russell & Son, Troy.
Louis Hering, Jr., Blackburn.
Chas. L. Fisher, Fisher & Terrell, Fulton.
I. D. Cotty, Cotty & Payne Hardware Co., Cameron.
B. F. Naylor, B. F. Naylor Hardware & Furniture Co. Marshall.
John Reiss, St. Louis.
Robert Griffith, Sedalia Hardware & Grocery Co., Sedalia.
E. C. McCarroll, Berhears & McCarroll, Vandalia.
Joseph Batta, Marceline.

The first session was held on the morning of Tuesday, April 11th, and was called to order by J. W. Poland, of Carrollton, and at his request, E. Thomas, of Trenton, read the minutes of the preliminary meeting which had been held in Kansas City on February 15th, and out of which the call had come which had eventuated in this meeting. The minutes of the preliminary meeting were approved, and it was decided to proceed to the organization of a State association.

A committee for the preparation of a constitution and by-laws was appointed, consisting of the following gentlemen: B. F. Naylor, Marshall; R. L. Hixon, Hannibal; M.C. Post, Brookfield; P. E. Harney, Joplin; G. F. Birney, St. James; J. M. Kenyon, Maitland; I. D. Cotty, Cameron; and H. W. Quernheim, St. Louis.

An address was delivered by Hugh A. Cole, president of the Iowa Retail Hardware Dealers' Association, in which he outlined the work done in their State, and pointed with pleasure to the results that had been achieved. Addresses were made by several gentlemen present. In the afternoon, a report of the committee on constitution and by-laws was read, and approved, in the following form:

Article I.—Name and Object.

Section 1. The name of this association shall be the Missouri Retail Stove and Hardware Dealers' Association.

Sec. 2. The object of this association shall be to promote the interest of and secure the friendly co-operation of Hardware dealers.

Article II.

Section 1. Any person, firm or corporation in Missouri engaged in the business of selling Hardware, and known and recognized as a regular retail Stove and Hardware dealer in good standing, may become a member of this association by subscribing to this constitution and paying the annual dues prescribed by the by-laws.

Article III.—Officers.

Section 1. The officers of this association shall be president, vice-president, secretary and treasurer, and nine members, no two of whom shall be chosen for the same Congressional district, who, with the president and vice-president, shall constitute an Executive Committee.

Sec. 2. The president, vice-president and Executive Committee shall be elected annually by ballot, and shall hold office until their successors have been elected and qualify.

Sec. 3. The secretary and treasurer shall be appointed or removed by the Executive Committee. The treasurer shall receive and disburse the funds of the association under the direction of the Executive Committee, through a voucher signed by the president and secretary, keeping a careful account of the same. The secretary shall be under the direction of the Executive Committee and his or her duties shall be assigned by them.

Sec. 4. The Executive Committee shall fix the salary of the secretary, and require bonds from the treasurer and secretary in any amount they may deem sufficient, to be approved by the president of the association. The fee of the bond company to be paid by the association.

Sec. 5. In case of a vacancy in any of the offices of this

Digitized by Google

association the same shall be filled by the Executive Committee until the next annual meeting. The Executive Committee shall perform the duties of an auditing committee, and examine the books of the treasurer and secretary and report their condition at the annual meeting of the association. A majority of the Executive Committee shall constitute a quorum for the transaction of business, either by meeting or correspondence.

ARTICLE IV.-

Section 1. The regular meeting of the association shall be held annually on the first Tuesday of February, at such place as may be designated by the association at its previous annual meeting.

Sec. 2. The Executive Committee is subject to the call of the president.

Sec. 3. It shall be the duty of the president, or in case of his inability to serve, of the vice-president, to exercise supervisory control over the affairs of the association, and preside at all meetings of the Executive Committee, and to carry out and enforce all measures adopted by the association calculated to improve the condition of the Stove and Hardware business.

Sec. 4. The president shall appoint from each county one member, whose duty shall be to obtain membership in this association and encourage the formation of local associations.

Sec. 5. The presiding officer shall appoint at the annual meeting a sergeant-at-arms.

Sec. 6. Amendments to the constitution and by-laws may be made at any regular meeting by a vote of at least two thirds of the membership present.

Sec. 7. All travelling men of Missouri who are in full sympathy with this association are eligible as honorary members on payment of $3 for initiation fee and $2 per year thereafter, but have no right to vote.

BY-LAWS.

Article 1. The membership fee shall be $3 and the annual dues $2 for each year thereafter.

Art. 2. Twenty-five members shall constitute a quorum to transact business at any meeting.

Art. 3. Each firm shall have one vote at any meeting of the association.

Art. 4. All fees and dues must be paid in before a person can be recognized as a member or become entitled to act in this association.

Art. 5. The sergeant-at-arms shall guard the door and see that none but members be admitted except by order of the presiding officer.

Art. 6. No malt or intoxicating liquors of any kind shall be served at any banquets given by or tendered the membership of the association at their annual conventions.

The nomination of officers being first in order, the Association proceeded to the election of the following named gentlemen:

President, J. W. Poland, Carrollton.

Vice-President, P. E. Harney, Joplin.

Executive Committee: E. A. Demeter, Macon; I. D. Cotty, Cameron; J. M. Kenyon, Maitland; Louis Hering, Jr., Blackburn; L. D. Groom, Richland; W. E. Burghauser, Fulton; Taylor Frier, Louisiana; H. G. Koenig, St. Louis; H. W. Quernheim, St. Louis.

On taking his seat President Poland made an interesting address, the spirit of which is shown in the concluding words, as follows: "We want to get nearer each other, not merely in prices, but in better feeling. We should cultivate a more friendly feeling with the dealers throughout the country, and so, gentlemen, when we get home let us go over and see the other fellow and talk to him, and if he is not with us try and get him to come with us and we will all be benefited by so doing."

Considerable time was devoted to the opening of the question box and to a discussion of the questions raised therein.

The following report was received from the Executive Committee: The Executive Committee met at 10 o'clock A. M., April 12th. It was called to order by President Poland. The committee were all present. E. Thomas, of Trenton, was elected to fill the office of secretary and treasurer for the ensuing year. The committees for the ensuing year were appointed as follows: Auditing Committee, C. F. Koenig, St. Louis; E. A. Demeter, Macon; Louis Hering, Jr., Blackburn. Committee on Grievances, B. F. Naylor, Marshall; R. L. Hixon, Hannibal, and M. C. Post, Brookfield. A committe of three were appointed to draft resolutions, as follows: H. W. Quernheim, St. Louis; Taylor Frier, Louisiana, and J. M. Kenyon, Maitland. It was decided to place the bond of the secretary and treasurer at $500.

The resolutions reported and adopted were as follows:

Resolved, That we request the manufacturers and jobbers that they confine the sale of their wares to the regular dealers, that each and every member of this association use every possible effort to see that this request is complied with; that if any manufacturer or jobber furnish goods to any one not regularly engaged in the retail trade as defined in the constitution of this association, the dealers affected shall report the same to the Grievance Committee, with affidavits and other proper proof, who, after properly considering the same, shall instruct the secretary to correspond with the manufacturer or jobber and endeavor to adjust the matters, and in the event of a failure to so adjust a complaint where the evidence is conclusive, the facts in the case shall be presented to the members of the association.

A resolution was adopted favoring the organization of a National Retail Hardware Dealers' Association, and a resolution of thanks was also adopted in honor of various persons who had assisted in the organization of the Association.

It was decided that the next meeting should be held in St. Louis.

Matters of Taste.

In Brazil, according to a French commercial report, there is a prejudice against black. The English used to send excellent sewing needles to that country, but they were wrapped up in black paper. When informed by their agents of the bad effect produced by this color, the factories of Saxony at once sent a consignment of needles (perhaps inferior) packed in pink paper. The Brazilian market was theirs in a very short time. The Chinese absolutely detest green. A French publisher was one day struck with the idea of sending a very pretty and very elegant Chinese calendar to the Celestial empire. The article would have taken well, but, unfortunately, a good deal of it was printed in green, and not one single copy was sold.

The London branch of the Bissell Carpet Sweeper Co. has issued to the trade of Great Britain an attractive circular, headed "Clinched," showing that the English courts have issued a perpetual injunction against certain parties, restraining them from selling or offering for sale any of Bissell's Premier Cyco-Bearing Carpet Sweepers, at less than the established price. This company have certainly made a record of success in maintaining fixed prices on their high-grade sweepers, and they are probably correct in the feeling that this has been one of the secrets of their success. They have, fortunately, not been compelled in this country to resort to such extreme measures as seem to be required in Great Britain, but have attained the same end through the effect of moral suasion and the good sense of the American trade.

HARDWARE'S "Prices Current" are reliable.

Digitized by Google

Review of the Markets.

Hardware: The pleasant weather of the past week or so has exerted an influence all over the country, and spring trade opens with a rush; stocks are being forwarded as rapidly as possible, delayed shipments creating anxiety if continued, but the indications are that the trade will readily adjust itself to the stocks held by the dealers so that there will be slight cause for complaint, the bulk of the orders having been in hand earlier this season than usual.

Wire Nails: Another advance, this time of 10 cents a keg, only, has been made in the price of Wire Nails. As delivery of orders previously booked have in many cases been somewhat slow, the present advance may placate the jobbers, who are waiting for the nails which have failed to arrive.

A further discrimination against the retailer in the interest of the jobber is made in the prices announced; the former difference of 5 cents a keg is now made 10 cents a keg, so that present quotations are as follows: f. o. b., Pittsburgh; to jobbers in carload lots, $2.10; to jobbers in less than carload lots, $2.12½; to retailers in carload lots, $2.20; to retailers in less than carload lots, $2.30. New York quotations are as follows: To retailers, carload lots on dock, $2.30 to $2.35; to retailers, less than carloads on dock, $2,45 to $2.50; small lots from store, $2.55 to $2.60.

Cut Nails: The Cut Nail market is without change; business continues in a very satisfactory manner and the prices referred to in our recent issue as agreed upon are fully sustained. New York prices may be quoted as follows: Carload lots on dock, $1.90@$1.95; smaller lots from store, $2.00@$2.10

Wire Cloth: So great a diversity in list prices on this important line of goods has ruled the market for so long a time, it was deemed advisable to convene the leading manufacturers, and endeavor to agree upon a uniform list of prices. This was done last month, and a new price list was agreed upon to cover the whole country. The adoption of a uniform gauge to be used by all the manufacturers of Wire Cloth was not the least important business transacted. A great many of the former list prices were left unchanged and as no agreement regarding discounts was pending, the principal advantages gained by concert of action may be referred to as follows:

The Washburn & Moen gauge was made the standard for Iron or Steel Wire and the old English gauge for Brass and Copper Wire.

The mesh in Wire Cloth is defined as the distance from the center to the centre of the Wire per lineal inch, and in Screen Cloth the mesh means the space between the Rods or Wires.

No length less than 100 feet shall be understood to be a roll.

All subdivisions to form the various grades of Wire Cloth must conform to these lists.

Barb Wire; As is invariably the case of late, the advance of 10 cents per keg on wire nails is followed by a similar advance on smooth and barb wire. As spelter continues to advance in the market, thereby increasing the cost of galvanizing, the usual difference over painted wire was increased 50 cents, making current quotations f. o. b., Pittsburgh, as follows:

To jobbers in carload lots, Painted	$2.20
" " " Galvanized	2.70
" in less than carload lots, Painted	2.22½
" " " " Galvanized	2.72½
To retailers in carload lots, Painted	2 30
" " Galvanized	2.80
" in less than carload lots, Painted	2 40
" " " " Galvanized	2.90

Smooth Wire: The advance in prices on this product recently made, makes the present quotations as follows:

To jobbers in carload lots	$1 95
To jobbers in less than carload lots	1.97½
To retailers in carload lots	2 05
To retailers in less than carload lots	2.15

For same reasons as given in the case of Barb Wire, the price for galvanizing has been advanced to 50 cents on sizes from 6 to 14, inclusive, being increased on Nos. 15 and 16 to 85 cents, and on Nos. 17 and 18 to $1.10.

Bright Wire Goods: The new Revised List which went into effect on April 1, was crowded out of our previous issue, and is given herewith. The discount applying to this List is 40 and 10 to 50 per cent, although the old List is still being used by some dealers at a discount based on old prices.

BRIGHT WIRE GOODS.

Revised List, April 1, 1899.

Horse and Mule Shoes: Revised quotations are announced by the leading companies manufacturing this ex-

Digitized by Google

tensive output. Under date of April 12 the following changes in price are given by the American Horse Shoe Co., Phillipsburg, N. J., J. C. McCarty & Co., Agents, No. 10 Warren Street, New York. Terms 30 days, or 2 per cent. discount for cash in 10 days f. o. b. cars, Phillipsburg, N. J, freight being equalized to all points. Subject to change without notice:

Extra Light, Light, Medium, Heavy, Long Heel, and Snow Shoes, No. 2 and larger	$3.35	per keg
Extra Light Steel Shoes, No. 2 and larger	3.35	"
XX Steel Shoes No. 2 and larger	3 85	"
Cow Boy Shoes, No. 2 and larger	4 35	"
Cow Boy Shoes, plain, No. 2 and larger	3 85	"
Sizes No. 1 and Smaller of all Horse Shoes,	Extra, .25	"
Mule Shoes, No 1 and larger	3 35	"
" No. 00 and 0	4.85	"
Jack Shoes	5 85	"
Turned-heel Horse Shoes	4.10	"
" Mule "	4.10	"

The adoption of these prices is agreed to by the other leading companies, including the Bryden Horse Shoe Co, Catasauqua, Penn., Rhode Island Perkins Horse Shoe Co. and Phœnix Horse Shoe Co. No orders are now accepted unless at prices ruling at time of shipment, and stocks are not guaranteed against decline.

Coil Chain: In common with other products in heavy Hardware in which the raw material is a large factor of cost, coil chain has stiffened in price materially as affecting recent orders. Present quotations on 1,000 pound lots f. o. b., factory, are represented as follows:

Inch	3-16	¼	5-6	⅜	7-16	½	9-16	⅝
Cents	6.35	4.85	3 95	3 40	3.25	3.15	3.10	3.00
Inch	11-16	¾	13-16	⅞	15.16	1	..	..
Cents	3.00	2.90	2 90	2 80	2.80	2 80	..	..

Trade is good in this industry, but delivery not as rapid as desired.

Stove, Sink and Tire Bolts: At a meeting of the Stove Bolt Manufacturers held in New York on April 19th, the printed discount on stove, sink and tire bolts, was reaffirmed at 70 per cent. discount.

Alaska Stove Specialties: Under date of April 1 we have received the following, withdrawing all former quotations:

Notice.—Wire has advanced 50 per cent. since first of year; all other metals entering the make-up of our line in proportion. We are compelled to advance our prices to you 10 per cent. on and after April 10th, 1899.

We will not cut down the high standard of the Alaska Line of Hardware.

Yours truly,

Troy Nickel Works.

Binder Twine: The market for binder twine remains substantially the same as last reported, and we quote as representing current quotations the following:

White Sisal, 500 feet to pound	9½ cents
Standard, 500 feet to pound	9½ "
Manila, 600 feet to pound	10¼ "
Pure Manila, 650 feet to pound	11 "

Prices are for carload lots, f. o. b. Eastern factories. An advance of ¼ cent per pound is charged in less than carload lots.

Cordage: The market on Manila and Sisal Rope is without active interest, the business being nominal and prices the same as previously given. We quote as follows:

Manila, 7-16 inch and larger	per pound,	10¼ cents
" ⅜ inch	"	10¼ "
" ¼ and 5-16 inch	"	10¼ "
Sisal, 7-16 inch and larger	"	8¼ "
" ⅜ inch	"	9¼ "
" ¼ and 5-16 inch	"	9¼ "
" Lath Yarn	"	8¼ "

Prices are for carload lots, f. o. b. Eastern factories. For less than carload lots the customary advance of ¼ cent is charged.

THE DAVENPORT TRADE.

We congratulate you on the success of your Ninth Anniversary Number of *Hardware* of April 10th, which has been received and read with much interest. It is full of instructive matter, elegant in appearance, unique in design, perfect in material and a model of printing and artistic workmanship. *Hardware* has more than fulfilled its promise to give its patrons the most elaborate and the best trade journal ever produced. We thank you for including our contribution among those worthy of special mention, for placing a photograph of a member of this house in your picture gallery; for a twenty-fourth of the beautiful bouquet given your regular correspondents, and for placing us among the list of representative Hardware Jobbers. Your encouragement to correspondents, frequent expressions of appreciation of efforts made, generous treatment and uniform courtesy entitle you to the success you have achieved. We thank you again for your kindness to us and again congratulate *Hardware* upon its Ninth Anniversary Number.

The American Steel & Wire Co. have doubled the d fferentials on carlots between jobbers and single carload buyers. Another very large manufacturer of staple goods has discovered that catalogue houses and department stores were retailers, and have accordingly "put them on the list." Let the good work go on.

Complimentary words have been said and written alluding to our efforts through your columns to have the custom of charging for packing and carting resumed. When the question of resuming specie payment was under discussion a number of years ago, some one said "the way to resume is to resume," a remark that would be decidedly applicable just now. And if this charge was restored, it would give an additional net dividend to the Hardware jobbers of this country of more than a million dollars. Will they resume?

Weather fine. Seeding well under way. Trade improving.

Sickels, Preston & Nutting Co.

THE PHILADELPHIA TRADE.

At last, cold and wet have given way to warmth and sunshine, and trade has been quick to feel the impulse.

As has been aptly said, "We still are all sun worshippers," and no man can feel the warm spring sun without a strong desire to get out of doors and engage in all sorts of out-door work and activities.

The demand for spring goods is now good, while the scarcity in many lines is making it difficult to fill orders. On two or three items there is an actual famine and with probabilities that the actual wants will not be satisfied during the present season.

Dealers, both large and small, have for so many years been in the habit of buying from hand to mouth that the present scarcity has caught many unprepared, and, for the first time in years, they are brought face to face with the fact that it is sometimes difficult to get goods when they are wanted.

Of course, this state of affairs naturally affects other lines which are strengthened by the demand for seasonable goods. Tools are especially active, and it is particularly noticeable that in many lines of tools, the sales in the first three months of this year have been more than equal to those in the last six months of 1898.

Prices are very firm and in many lines still advancing, as goods which have so far resisted the temptation to advance prices now, on account of the well maintained prices of raw material, find themselves obliged to move upward, and even then the most conservative manufacturers find themselves confronted with an increased cost which compels a moderate advance, at least in the price of their manufactured goods.

The outlook is certainly for a good Spring trade, and the most welcome reports have lately come to us to the effect that the retail trade is likewise having an increased demand from consumers, and we have already had reports from one or two of our salesmen that their customers have been so busy they have found it almost impossible to get a share of their attention.

After all this is a basis for a permanent improvement. If consumers are actually using up the goods, it is but reason-

Digitized by Google

able to expect that advanced prices will be fully maintained and perhaps increased, while there is no doubt that the larger amount of money now being paid out in wages is greatly increasing the purchasing power of the community.

Biddle Hardware Co.

THE CHICAGO TRADE.

We have received your anniversay number of *Hardware*, and are much pleased with the same. We are so busy with other matters that it is impossible to send you a formal letter for your issue of the 25th. Suffice it to say that we are having more business than we can conveniently attend to; the chief difficulty being our inability to receive goods from the manufacturers fast enough to supply the very urgent demands of our customers this season of the year.

Wells & Nellegar Co.

THE DENVER TRADE.

Permit us to congratulate you heartily on the fine appearance of your Anniversary number, and to express our pleasure at seeing the faces of the writers whose letters we enjoy with each edition. The ground has been covered so thoroughly, and there is so much to read in this number that we think your friends will hardly have time to glance at the letters in the next issue, and we will, therefore, say only that conditions remain unchanged, with the exception that Spring is opening up with us very rapidly and with it the trade as expected is coming in, and we find ourselves with all the business we can comfortably attend to, and prospects of a continuation requiring extended facilities.

The George Tritch Hardware Co.

THE ST. PAUL TRADE.

No doubt that all jobbers in this section can say that they are thankful that the winter is past, though the fact that we are at least two weeks later than usual is causing us some worry as it may mean a short season and a consequent danger of frost, but we shall trust in Providence and go ahead as though we were sure of a good crop.

The spring weather has opened up trade and everyone is in a rush for goods. With a few exceptions, our manufacturers have kept us supplied and we are ready for all the business we can get.

Prices are held firm. The advances have been made by us as often as by manufacturers, and we cannot believe that the higher prices have caused any less buying, but it has rather stimulated it.

We received notice of a further advance on wire and nails and put it into effect to-day. Question: How long will the powers that are continue this? Being a good Republican, I say open the doors for foreign makers by taking off the tariff on all goods where these immense trusts exist. This will save our party and prevent such extremely high prices. C. W. Hackett Hardware Co.

THE OMAHA TRADE.

The warm weather of the past few days has brought out the demand for season goods in great shape, and the howl that goes up from the trade for poultry netting, wire cloth, steel goods, screen doors and various other season goods of this kind that are hard to get, is both loud and deep. As is usual in cases of this kind, if they knew the supply was plentiful and that there would be no trouble in getting all they want, they would not need them half as bad as they do now, but the prospect of scarcity makes every retailer feel that he wants all these season goods thirty days in advance of his wants so as to be sure and have them. As a customer said the other day, "Why in the world don't you send up my screen doors? I want them the worst kind?" and the reply was, "We have got three or four cars of screen doors that we are awfully anxious to get rid of and we will have your order up inside of fifteen minutes." "Oh, well you need not hurry about it: any time within a week or two will do, but I thought you did not have them." Human nature is the same the world over. The minute people find out goods are scarce and hard to get, they want them worse and they want them quicker than they ever did before in the world or perhaps ever will again. We are all doing our best to satisfy the demands of the trade, but manufacturers are not getting out season goods as promptly as we would like to see them, and as promptly as they would undoubtedly be glad to do, and the burden of correspondence is, on this account, noticably increased.

Collections are somewhat light from the fact that roads are bad and farmers busy, but trade is all that can be expected, and while prices have a lurid look compared with those in effect during the fall of 1898 compared with those in effect five years ago, they are still low enough to offer and invite an opportunity for merchants who have the ability to make disposition of them and carry full stocks.

Rector & Wilhelmy Co.

THE CLEVELAND TRADE.

In the strong feeling against combinations, we must not forget that the conditions of modern life would be impossible without their aid. We are greatly indebted to them for the means and opportunities that they furnish, but as they have no bodies that can be imprisoned, and no souls that can be eternally tortured, they need to be hedged about by law to protect the individual.

Carefully considered legal restrictions, fearlessly enforced, are an absolute necessity. There is little danger of injury to corporate wealth from repressive legislation, as capital is competent to care for itself. Society must first care for the individual, and trusts and corporations will find their best protection in this. The strong must bear the infirmities of the weak.

Insomuch as the tariff aids trusts and combinations, its modification is imperative, as the revenue from such tariff comes from consumers and goes into the pocket of combinations.

The pinnacle seems to have been reached in the advance of material, but as many goods are being sold below what they would cost to produce at the present price of material, a marked advance is sure to take place in many lines before July 1st. Nearly the entire line of manufactured goods is safe to purchase. Trade is still fair, collections good.

The Lockwood-Taylor Hardware Co.

THE INDIANAPOLIS TRADE.

These are our busy days. We have been confronted for the past two or three months with an inability to fill our orders complete. Now we are troubled to find floor space where we can assemble the orders which we are daily receiving.

We have an idea that we are filling our orders as complete as most jobbers. We realize in saying this we are not complimenting ourselves or others to any great extent.

It is on seasonable goods where most of the shortages occur.

Our bicycle business is very satisfactory at present. Our salesmen are evidently trying to make up for the sales they lost during the past two months on account of the unseasonable weather, rain or mud.

Terne plate is now moving in good quantities. Consumers who evidently after hearing of the advance, concluded to make the old roof last another year, have decided it is better to encourage good times than to discourage them.

They realize that they can help trade in general by replacing the old roof with a good one, and one that will be cheaper in the end than the old roof, and are specifying Old Style Plates, for which the demand is increasing.

This leads us to suggest that many jobbers and retailers are not true to their highest interests when they are too conservative in the matter of assisting in keeping prices up to their present level.

Like many property holders, they are scheming in every way to discourage the manufacturers as to the permanancy

Digitized by Google

of the present market in order that they may buy commodities cheap, forgetting that low prices on their wants means a return of empty houses to the landlord and small profits to the dealer and jobber. If the property owners and dealers in Hardware want to see satisfactory returns from their investments, they must not balk at the present prices and stop the procession momentarily or longer.

It is much better to keep moving with the times than to get run over by the procession or left in the rear.

The man who would get as much out of business as his progressive neighbor must occupy a front seat, keep in touch with the times, and take advantage of all the opportunities they present.

Van Camp Hardware & Iron Co.

THE BALTIMORE TRADE.

A few days of gentle and warmer weather, suggestive of approaching summer has stimulated purchases of window and door screens, freezers, etc., to such an extent that it reminds us of a heavy swell at the seashore, when we wonder if the next wave will be larger than the last.

Between the large orders there are a host of little ones, which we always welcome and dispatch with the same care and promptness.

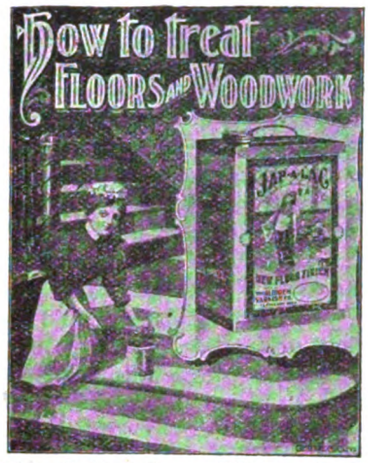
With an unusually heavy stock and but few shorts to purchase, there is keen pleasure in selling, which is somewhat intensified by the knowledge that whilst our prices are as low, if not lower, than our competitors', we are enabled to realize handsome profits by reason of the large and numerous recent advances made by the manufacturers since our contracts were placed.

Could the good things in life last forever, the end would never come, and in the destiny of the jobbing Hardware business cruel Fate ordains that such happy conditions can be but ephemeral.

Barring a few small failures and those good customers who will not surprise us by paying their bills within the prescribed time limit, collections are as good as could be anticipated.

The latest and Anniversary issue of *Hardware* reflects credit upon the management, editor and pressmen of the paper, and was a production worthy of their ability and genius; we desire to congratulate and wish them long life and prosperity. H. W. Webb & Sons.

THE BIRMINGHAM TRADE.



We desire to congratulate you on the handsome anniversary issue of *Hardware*, which we have found quite interesting, and are glad to see that the prevailing opinion is that the jobber occupies a logical position which he will continue to fill and grow stronger therein, demonstrating his usefulness both to the manufacturer and to the retailer, and also that he is an economical factor in the distribution of products from the manufacturer to the consumer.

We are glad to report that business continues good and shows no signs of weakness. Reports of further advances reach us by nearly every mail, and when the manufacturers consume the material which was bought before the advances were made, we may expect still further advances, which will not be unreasonable.

The advances in pig iron have stimulated effort on the part of some to revive plants which have been idle for some time. This cannot be done in a few weeks, but requires time to complete all the arrangements necessary. While these repairs are being made, it gives fresh demand for supplies, and here the Hardwareman comes in; besides he hopes thereby to gain a permanent and regular customer who will help to swell the steady demand for supplies. This creates new pay rolls, puts more money in circulation and all avenues of trade are benefited.

The outlook is encouraging. Our people are all hopeful and confidently expect that our city will continue to grow. The volume of trade is larger than any period of the past, and while these things continue, we are not so much concerned about whether Jefferson Democrats eat dollar dinners or ten-dollar dinners, as the logic of events is more powerful than the politician. The continued bad weather has tended to prolong the spring purchases of agricultural supplies and will bring up the quantity to equal or exceed that of former years.

Moore & Handley Hardware Co.

"Just the Time"

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

THE PITTSBURG TRADE.

Whatever may be the opinion of the general reader, there is no doubt that to the Hardware trade, manufacturer, jobber and retailer, your issue of April 10th was of great interest. If all the ideas contained in that discussion are absorbed by the trade, and the wheat sifted out, there will be a seeding that will produce a good harvest of improved business customs.

Business is very good in our city. Manufacturers are getting more orders than they can handle, and jobbers are working nights to keep up with their press of orders. This is partly the result of the late opening of spring weather, which delayed March business, crowding it into April.

The bicycle trade is especially busy, as the rough weather early in the season prevented early sales, which now come all at once. Bicycles of better quality than any previous season are now retailed at $50, $35 and even $25, which makes riders of many who could not indulge at higher prices.

Comparisons of the present advanced prices of many goods with those of five or six years ago disclose the fact that most iiems are as yet only worth about 60 per cent. of their former value, so that generally the trade are paying the new rates without complaint.

Logan-Gregg Hardware Co.

THE COLUMBUS TRADE.

Trade continues good and the trouble now is not about orders but to get goods fast enough to fill them. Manufacturers of the finished articles claim they can not fill orders promptly for the reason that manufacturers of steel and iron are not filling their contracts with promptness. One manufacturer said that out of a contract for 250 tons of steel given last August to be delivered in January, February and March, they have received only one car up to March. We have heard similar complaints from other manufacturers. We cannot understand this condition of things on early orders. There are no serious labor troubles and why manufacturers are not able to supply about the usual quantity they make annually seems strange. We realize the fact that trade in all lines is very far ahead of last year, and would not be surprised at slowness in filling duplicate orders, but it is next to impossible to get your usual quota of goods. We find a disposition on the part of some few manufacturers to try and get out of filling some old contracts, and if there is the slightest excuse they refuse to fill old orders at old prices. We are glad

Digitized by Google

to say that only two out of all the manufacturers with whom we deal, have shown this disposition, and no doubt the time will come when they again will be less exacting than they are now. We are sorry that another advance on wire nails was made, even if it does mean a good many dollars easily made for us. We regret it because we candidly believe there was no reason for it. Advances have not been quite as frequent for the past ten days and there are signs of a more settled market. The weather is fine now, and everything "growable" is doing its best. The writer took a trip in the country yesterday for a little recreation and to "pester" the fish a little, and it did his soul and body good to see how pretty the wheat fields look. The beautiful deep green spread out over a hillside makes a picture that no artist can do justice to. Farmers are very busy now and so were the fish.

Smith Bros. Hardware Co.

THE BOSTON TRADE.

When we consider the backward season and the fact that the whole of Northern New England has just been relieved of its winter overcoat, the amount of business under such conditions is wholly satisfactory, and as soon as we have a taste of genuine spring weather we expect to be loaded with business.

The local retail trade already shows evidence of marked improvement, and orders which are daily received from suburban cities and towns show that stocks are light and they have yet many spring goods to purchase.

The demand for builders' Hardware for the residential class of dwellings shows that the recent advances which have been made in this class of goods will have little effect upon this kind of building.

The manufacturers are catching up with the contracts which were placed early in the season and it will be but a short time before orders can be filled as promptly as ever.

What we now hope for, is to see an increased demand from the consumers all over the country in order to keep the factories busy that there may be no reason for a decline in present values. One thing is very encouraging, and that is: at the present writing, nothing appears in the business market to prevent a continuance of heavy sales at fair margin of profit.

Frye, Phipps & Co.

THE MINNEAPOLIS TRADE.

There is nothing in particular new, excepting a recent advance in nails, which the trade knew all about; we think it was generally anticipated. There is a scarcity of wire cloth in this market, as well as some other staple goods, local jobbers getting $1.25, retailers $1.50 by the roll. Our customers are paying the advance with good grace, and we hear very little about price cutting, dealers, as a rule, taking advantage of the situation.

The ground is in excellent shape for the crops; farmers are very busy seeding; we are having good spring weather. The general business outlook is fully as favorable as already indicated in previous letters.

W. K. Morison & Co.

Catalogues and Quotations Wanted.

The Norfolk Hardware Co., Ltd., which will be located at No. 67 Market Place, Norfolk, Va., will open for business some time between May 1st and 15th. They will be glad to receive catalogues and quotations from all manufacturers of Hardware, tinware, house-furnishing goods, paints, oils, colors, and kindred lines. This new concern is composed of enterprising men, and will form a welcome addition to the Hardware business of the South.

Manufacturer and Jobber.

Editor Hardware: As we are daily either hearing or reading objections to the existence of the middleman, and as the importance of the subject is so great to a good many men, it would seem that it ought to be fairly considered. Public opinion being the great power of this day, it would be well for each individual to understand that he is more or less responsible for the correct formation of this great power, as his expressions of thought have an influence with his hearer of lesser knowledge or experience. So far as the public is concerned, it seems to be well understood that a very large percentage of the people are good enough, but the smaller percentage would be less misleading if they were either better informed or less selfish and more truthful.

If a manufacturer is a maker of large articles like warships, he does not seem to need either the jobber or the retailer, but this would not apply to Hardware, because the consumer orders in such small quantities that no manufacturer could afford to deliver each small order separately, neither could the consumer afford to pay an express charge on each of the small orders, as it would be greater than the retailer's profit, therefore, no manufacturer can retail as cheaply as the retail dealer, and this very same

STANLEY'S PATENT
Roofing Bracket.
STANLEY
Rule & Level Co.
New Britain, Conn.
SOLD BY ALL HARDWARE DEALERS.

The parts are of Spring Steel, firmly riveted together. Push the beveled ends up under two layers of shingles, already nailed down; the Bracket has two separate bearings on the roof, and is so formed that any increase of pressure from above, increases its stability.
One dozen per minute can be placed in position, or removed; and great economy in lumber and nails will be found. There are no loose parts to get lost; and no nail-holes are made in the roof. In constant use these Brackets will last a life-time.
No. 1. Roofing Brackets, 8 inch, ½ dozen in box. Per Doz., $3.00

principle applies to the case of the jobber. A small buyer can go to a jobber and order small quantities of many makes and kinds of goods, and get them to his store cheaper than if he ordered the same goods of a dozen manufacturers and paid as many freight charges or expressages, it therefore follows that it is cheaper for the consumer if the manufacturer ships large quantities of goods to the jobber, and the jobber assembles many small quantities of different manufacturers' goods in one shipment to the retailer.

All manufacturers gladly accept the jobber's large orders, generally payable in ten days, but some of them have not been fair to the jobber after getting his order, as they have too often accepted small orders at nearly the same price.

Yours respectfully,
SALESMAN.

New York, April 22, 1899.

The Work of a Watch.

"A well and properly made watch," says E. Howard, in "Depew's History of American Commerce," has wonderful qualities as a machine, considering the labor it has to perform and the length of time, if treated with a very little care, it will continue to do its work. It is conceded that every person in the world has a distinct individuality, and it is just so with every watch that is made. Some of the parts are so minute that, although you suppose you have them all alike, the fact is that no two have been made without some little variation having an appreciable effect upon its action as a timekeeper. That is where the individuality comes in. The lowest or medium grade watch may be found, occasionally, to be keeping time better than some of those which have had a great deal of time spent upon them to make them as nearly perfect as possible, yet if you take the latter in pieces and thoroughly examine them in all the parts, you cannot find any cause for the defect. Does any one ever consider the amount of labor that is performed by a watch during a lifetime, which is 50 years at least? In its daily duties the balance vibrates 18,000 times each and every hour, 432,000 times a day, or 157,680,000 times a year. The hair spring makes the same number of vibrations and an equal number of ticks from the escapement. The first thought would be that the machine would be worn out in a year, but this does not prove true. If it is a good watch, you can multiply 157,680,000 by 50, which would give 7,884,000,000 pulsations, and yet the watch will be in good condition.

The Oldest Blacksmith's Shop in England.

Some of the blacksmiths' shops which our readers and their travelers are in the habit of frequenting are quaint in the extreme. The village smith seems to remind one of the primitive trader who made up in his own workshop so many of the articles of kitchen use. In the village of Geddington, in Northamptonshire, there is an ancient smithy which is said to be the oldest smith's shop in England. Close by stands one of those elegant crosses erected by Edward I., to the memory of Queen Eleanor. We can well imagine that the smith's shop, with its ancient sun-dial as its contemporary, and the thatched cottages, with emblems of the blacksmith's art scattered about, give the place a charming old-world appearance.—*Ironmongers' Chronicle* (Eng.)

The annual meeting of the stockholders of the Joseph Dixon Crucible Company was held at the Company's main office, Jersey City, N. J., Monday, April 17, and out of a possible vote of 7345 shares, there were 7069 shares voted for the re-election of the old board, consisting of Edward F. C. Young, John A. Walker, Daniel T. Hoag, Richard Butler, William Murray, Alexander T. McGill and Joseph D. Bedle. President E. F. C. Young; vice-president and treasurer, John A. Walker; secretary, Geo. E. Long, were re elected by the Directors. Judge Joseph D. Bedle was also re-elected as counsel.

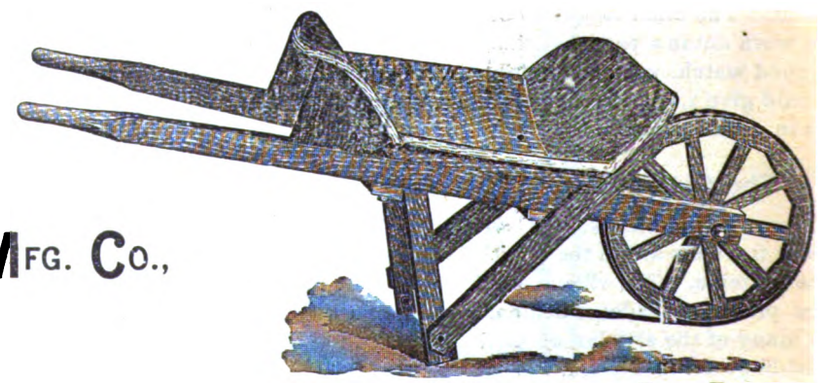
Liquid Fuel.

Liquid fuel for steamers is exacting international attention among those whose province it is to study the economics of transportation by water. A notable trial of petroleum on the steamship *Haliotis* is reported as having brought out the advantage of the fuel most prominently. The bunkers of the ship are so constructed that they can be used for either oil or coal. From them the oil is pumped to a service tank above the boilers, whence it flows by gravity to a device at the furnace doors, where by means of a steam jet it is "pulverized," or broken into spray. Its combustion is carried on without any layer of incandescent coal. It is claimed that a given weight of oil develops more heat than the same weight of coal, which means a reduction in the dead weight of fuel that must be carried for a voyage. In the trial mentioned it was found that 2.27 pounds of ordinary English coal were used for each indicated horsepower per hour, as compared with 1.67 pounds of oil.

In the Eastern trade, where steamers have to rely on inferior Japanese and Indian coals, the comparison is still more in favor of liquid fuel. For instance, a steamer requiring a minimum of 500 tons of coal for her voyage from Aden to Singapore could cover the distance on 300 tons of oil, thus largely increasing her cargo capacity. The speed at which the fuel can be taken on board is another advantage. While the coaling in one hour may amount to 60 or 80 tons, 400 tons of oil can be pumped into the bunkers in the same time. The saving of labor is another important consideration. Once the burners are regulated, the supply goes on automatically, and a whole voyage may be run without once opening the furnace doors. This reduces the number of stokers, and those who are engaged are able to work under much pleasanter and more healthful conditions. Very little smoke is produced, a feature which commends the use of liquid fuel very strongly for men-of-war. The ease of its stowage also favors its use in the closely-packed interiors of torpedo-boat destroyers. The consumption of steam, involving a serious loss of fresh water, is one of its few disadvantages.—*Exchange.*



The Origin of Fireplaces.

The fires of early times were without doubt logs of wood heaped together and lighted upon the hearth. Over this fire probably the pot was affixed which contained the meal to be cooked. As the knowledge of the use of metals increased, men found that by arranging these logs of wood forming the fire on bars above the ground, a bright fire was the sooner obtained. Hence the arrangement of the andiron, which was originally simply a bar of iron placed across the hearth, supported on blocks of stone or burnt clay, across which and resting on them the logs were placed. Gradually an upright standard in front, and a leg formed out of the cross-bar at the back, removed the necessity for the stone block or clay lump, and the complete andiron became a regular addition to the fireplace. Perhaps the oldest form of andirons known were found at Colchester, and at Hartlip in Kent; they are of very simple construction, though with a little attempt at ornament in the top of the two standards; but as men grew more skillful in the working of iron, they showed their skill in the making of useful things in the house, making them ornamental as well as useful.—*Ironmongers' Chronicle.*

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Evansville, Ind —E. M. Bush Hardware Co. has been incorporated by Edward M. Bush, Albert N. Meyer and M. E. Bush. Capital stock, $15,000.

Girard, Mich.—Glen Williams and father have opened a Hardware store.

Henderson, N. C.—The Watkins Hardware Co. has been incorporated by Samuel Watkins, John B. Watkins, John B. Watkins, Jr., and William E. Moss.

Muskegon, Mich.—A new Hardware firm, to be known as the People's Hardware Co., will shortly open a store at No. 63 West Western Avenue, the next store east of the Union National bank. The new company is composed of Oscar A. Hopperstead, who has had ten years' experience in the business, having been in the employ of the Towne Hardware Co. here; Ralph J. Bush, who was formerly with the F. Alberts Hardware Co., and Gustave Dietrich, receiving teller at the Hackley National bank.

Reinholds, Pa.—E. P. Moyer has opened a Hardware store.

Walsenburg, Col.—Frolich & Jones, Hardware, sporting goods, etc., new firm, have commenced business.

Changes and Improvements.

Bainbridge, Ind.—Priest & Hart. Hardware, stoves, etc., succeeded by Collivers & Huffman.

Beattie, Kans.—Baer & Brunswig have purchased L. E. Helvern's interest in the Helvern Hardware Co. and the store is now running under the management of Jim Thomas.

Buckhannon, W. Va.—G. W. Smith, Hardware, sold out.

Bussey, Iowa.—Mick & Co., Hardware, dissolved.

Camden, N. Y.—Adam G. Robson has sold his Hardware and plumbing business to William R. Becker and Willis Maine, who will continue the trade under the firm name of Becker & Maine.

Cato, N. Y.—Samuel M. Lawrence, Hardware, etc., sold out.

Chase, Kans.—The Weilan Bros. have rented a building here and will put in a large stock of Hardware.

Chillicothe, Ohio.—Gillum & Spetnagel, wholesale and retail Hardware, succeeded by Spetnagel Hardware Co.

County Line, N. Y.—Jesson Bros. have sold out their entire stock of Hardware to James Morgan and Wallace Coates.

Cranbury, N. J.—Derrick G. Davison, who for a number of years has conducted a Hardware store here, has advertised his business for sale.

Deckertown, N. J.—J. L. Lawrence & Sons have purchased the Hardware business of the late John A. Quick, in Newton.

De Ruyter, N. Y.—E. S. Merritt is to move his stock of Hardware from the Annas store to the rooms formerly occupied by W. W. Rainey.

Durand, Wis.—Smith Bros., Hardware, dissolved.

Elburn, Ind.—Krum & Reeves, Hardware, succeeded by Reeves & Heald.

Ennis, Texas.—C. P. Wilson & Co., sold out.

Floyd, Ia.—A. M. Gage is having his Hardware store enlarged to accommodate his large stock of new Hardware, harness, etc.

Fort Wayne, Ind.—The Hardware establishment of J. B. Niezer & Co., of Monroeville, has been purchased by Charles Lovelace, of this city, and Austin Kint, of Chicago.

Geneva, Ind.—W W. Briggs, Hardware and implements, sold out.

Geneva, N. Y.—The firm of Corwin & Wilson, Hardware dealers, have dissolved, Major William Wilson having bought the interest of his partner, ex-sheriff Irving Corwin.

Glen, N. Y.—Yates & Bunn, Hardware, sold out.

Greentown, Ind.—John Holliday Hardware, succeeded by Holliday & Kern.

Huntington, Ind.—Smith & Dickman, Hardware, Mr. Dickman sold his interest.

Jamaica, N. Y.—Martin S. Rapelyea has sold out his Hardware business at the corner of Fulton and North Washington Streets, to Percy G. James, of Flushing, formerly of Hartley & Graham.

Leaf River, Ill.—Samuel P. Allen, Hardware, succeeded by Allen & Reber.

Louisville, Ky.—B. G. Whitley, of Danville, Ky., has purchased a large interest in the firm of Fulton, Conway & Co., Hardware dealers, of No. 824 West Main Street, and has taken the place of President B. F. Grigsby in that corporation.

Marble Rock, Iowa.—Nelson & Voorhes, Hardware, dissolved partnership.

Marlboro, Mass.—Lamson & Trowbridge Hardware dealers, who were hustled out of the old Corey building by fire, are again back at their old location in the west end of the new Corey building and have one of the best fitted, best lighted and most commodious stores in this section of Massachusetts.

Nashville, Tenn.—The Gray-Dudley Hardware Co. will build a new storehouse, facing on Market and College Streets and running along Printers' Alley. The new building, when completed, will be the largest storehouse that has ever been erected in Nashville. It will front seventy-five feet on Market Street, fifty feet on College Street and its length will be 230 feet.

New Haven, Conn.—The firm of C. S. Mersick & Co. have purchased the entire business and stock in trade of Wooster P. Ensign, who was formerly, before the death of his father, of the firm of Wooster A. Ensign & Son. The stock of goods purchased of Mr. Ensign will be removed to the store of C. S. Mersick & Co.

Pensacola, Fla.—Johnson & Forbes, Hardware, etc., dissolved partnership. The business will be continued at the same stand by Wm. Johnson and Wm. R. Johnson, his son, under the name of Wm. Johnson & Son.

Terra Haute, Ind.—Edgar Dick, Hardware merchant, has rented the storeroom one door north of Badgley's grocery at Fourth and Ohio, on the east side of the street, and will shortly move his stock to that place.

Warner, N. Y.—The firm of Turner & Strickland has been dissolved. Mr. Turner will run the tinsmith and Hardware part.

Richfield, Utah.—Bolitho & Lewis, Hardware, dissolved.

Sherburne, N. Y.—William Cashman has purchased the large brick block of the Sanford estate and will remove his Hardware business therein.

St. Albans, Vt.—Hale & Holman, Hardware, succeeded by C. H. Hale.

Versailles, Ky.—V. A. Thomas, Hardware, etc., succeeded by G. S. Ryder.

Wayland, N. Y.—Geo. E. Whiteman & Co. have sold their Hardware business to Charles Snyder, of Livonia, who will take possession immediately, and remove the stock of goods to the Pursel store.

Welda, Kan.—John Hamilton, Hardware, etc., sold out.

Wooster, Ohio —The Wooster Hardware Co. have taken possession of new office quarters, or rather the old office has been enlarged with a fine partition of Southern pine and plate glass.

Zanesville, Ohio.—Edward B. Kemp, the Hardware merchant of Putnam Avenue, has begun to remove his stock of goods from the present stand to the corner of Putnam Avenue and Harrison Streets.

Business Embarrassments.

Baraboo, Wis.—F. N. Gaskell, Hardware dealer, has made an assignment. The liabilities are $3000 and assets, $1500.

Rutland, Vt.—A. C. Bates & Son Co., Hardware, gave petition in bankruptcy.

West Burlington, Iowa.—Geo. Knecht, Hardware, etc., gave voluntary petition in bankruptcy.

Fires in Hardware Stores.

Dundee, N. Y.—Beekman & Clary, Hardware, damaged by fire as a loss of $1000; insured for $600.

Fair Haven, Vt.—A. J. Norton, Hardware dealer, stock damaged by fire.

Lead, S. D.—Henry Jacobs, Hardware, damaged by fire.

Reading, Pa.—The Hardware stock of Bard, Reber & Co. has been destroyed by fire.

Rochester, N. Y.—John Litzenberger, Hardware, etc., destroyed by fire.

Burglaries in Hardware Stores.

Macon, Ga.—Merritt Hardware Co., revolvers.

Philadelphia, Pa.—Rogers & Miller, $500.

Rice, Texas.—Bartlett Bros., $200.

West Union, Ohio.—L. L. Edginton & Sons, small loss.

Cleveland, Ohio.—The Danielson Machine & Tool Co. has been incorporated with $50,000 capital stock.

Cleveland, Ohio.—The Diamond Bolt & Screw Co. has been incorporated to manufacture Hardware, on $25,000 capital stock. The incorporators are: Isaac Lewis, Robert Lindmueller, D. E. Wright, S. E. Payne and J. M. Stoddard.

Columbus, Ohio.—The Liedesker Tool Co. has been incorporated under the laws of West Virginia with a capital of $160,000, with headquarters in Marietta, Ohio, has filed articles of incorporation with the Secretary of State.

Elmira, N. Y.—The Elmira District Steam Heating Co. has been incorporated by John A. Reynolds, William S. M. Card and Charles P. Swartwood. Capital stock, $10,000.

Hickory, Tenn.—A pump factory has been started.

Indianapolis, Ind.—The Sixteen-in-One Wrench Co. has been incorporated; capital $10,000. Directors: F. M. Reed, J. M. Brock and E. I. Fisher.

Jersey City, N. J.—The Smith-Lightcap Clevis Co. has been incorporated with principal office, No. 1 Montgomery Street. Will manufacture ploughs, clevises, plough shares, harrows, etc. Capital, $20,000. Incorporators: G. De Festitces, Ferd. von Kusserow, Peter Whitney.

Kansas City Mo.—The Sieben Mfg. Co. has been incorporated by Henry Sieben, Benjamin Smith, Dent Yates, C. E. Burnham, John C. Miller and Frank T. Merwin. plumbers' supplies and machinery. Capital stock, $10,000.

Lowell, Ohio.—The Lowell Mfg. Co. has been incorporated to manufacture plow handles and other woodenware. Capital, $10,000. Incorporators: C. E. Verger, F. A. Boyle, Lewis Spies, L. F. Traffs, A. L. Savage, all of Lowell.

Millbury, Mass.—E. H. Sweet, of Worcester, is to start a new industry in this town, opening a hammock factory on South Main Street. He is putting in new machinery and will start the business at an early date.

Mount Kisco, N. Y.—The National Automatic Weighing Machine Co. has been incorporated by William H. Male, E. J. Patterson and others, to manufacture and sell coin operated machines. Capital stock, $500,000.

New York, N. Y.—The Manhattan Cutlery Co. has been incorporated by W.B. Wyman, D. Stuart Cameron and Wm. S. Bennett. Capital stock, $1000.

Niles, Mich.—The Star Mfg. Co. has been incorporated by L. E. Wood, E. E. Woodford, H. Rose, W. J. Gilbert and B. F. Freeland; engines, heaters, etc. Capital stock, $10,000.

Oakland, Cal.—Articles of incorporation have been filed by the James Graham Co., manufacturers and dealers in stoves, ranges, etc. The capital stock is $28,000, of which $24 000 has been subscribed. The plant is located at Newark; principal place of business, San Francisco, and the directors are Sarah, George E., Etta B., James W. and Stella M. Graham.

Portland, Me.—The Non-Corrosive Metal Co. has been organized for the purpose of manufacturing and dealing in non-corrosive steel, with $100,000 capital stock, of which nothing is paid in. The officers are: President, John Kilburn, of Belmont, Mass.; treasurer, E. A. Thompson, of Reading, Mass.

Springfield, Ill.—The National Screw & Tack Co., of Cleveland, Ohio, capitalized at $500,000, is licensed to do business with $5,000 capital in Illinois.

St. Louis, Mo.—The St. Louis Heating Co. has been incorporated by Edward P. Clark, Charles Tureczek, John H. Kentor and Henry Bradford. Capital stock, $2000.

Terre Haute, Ind.—The Standard Husker Co. has been incorporated with $150,000 capital stock and will at once begin the manufacture of the Warrick corn husker.

St. Louis, Mo.—The Catherine Lead Co. have filed articles of incorporation with a capital stock of $200,000. The incorporators are Frank W. Carter, Arthur L. Tuttle, Edwin H. Wagner, Harold M. Tittmann, Will Brown, A. N. Sayer and Harry J. Cantwell.

Changes and Improvements.

Baltimore, Md.—S. B. Sexton & Son, No. 511 West Conway Street, will erect a four-story brick building to their stove and iron foundry.

Bellefontaine, Ohio. — The Woolman-Knight Mfg. Co. have changed their name to the Bellefontaine Hame & Tool Co.

Denver, Col.—The Colorado Iron Works have transferred to the Colorado Iron Works Co. their entire plant and grounds at Thirty-third and Wynkoop Streets for $25,000.

New Haven, Conn.—The firm name of Beyer & Weidig, manufacturers of drop forgings and Hardware specialties, at Nos. 360-364 Congress Avenue, has been changed to Beyer, Weidig & Co. Edward R. Mayer is the new member of the company. It is the plan of the manufacturers to enlarge their plant within a short time, as they are rushed with orders, and their present quarters are becoming too small.

New Haven, Conn.—The Kilborn & Bishop Co., manufacturers of drop forgings, corner of Lloyd and River Streets, have purchased a plot of real estate 37½x100 feet, bounding their property on the north, with the view of enlarging their plant and to provide for the extension of their business.

Philadelphia, Pa.—The Reading Screw Co. will remove its plant to Norristown, where it will erect a new factory 50 x 163 feet.

Portsmouth, Ohio.—The Burgess Steel & Iron Co. have increased their capital stock from $150,000 to $500,000.

Springfield, Ohio. —The rake factory, formerly occupied by Bookwalter & Co., owned by John W. Bookwalter, now in New York, has been sold to Springfield parties for $8000. It will be used for manufacturing purposes.

Recent Fires.

Sycamore, Tenn.—The graining mill of the Sycamore Powder Works has been blown up, entirely destroying the plant.

Miscellaneous.

Detroit, Mich.—Officers have been elected for the Standard Computing Scale Co., and the articles will soon be filed. The capital stock is $50,000, of which $130,000 is paid in. The officers are: Thos. F. Comerford, president; Fred P. Goettman, treasurer, and Francis C. Osborne, secretary. These, together with Oscar B. Marx, Dr. F. G. Miner, John Schweikart and Joseph M. Bucher, will form the board of directors. The other two stockholders are A. J. Radcliffe and John Ferguson.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Boston, Mass.—Smith, Patterson & Co. have opened a branch store for the benefit of their Back Bay patrons at No. 372 Boylston Street, where they will display their popular line of bicycles, including the Keating, Bostonian and Lorraine.

Newark, N. J.—Reed, Dawson & Co. have been incorporated by James G. Barnett, Thomas H. Reed and Frank A. Dawson to manufacture bicycles, etc. Capital stock, $50,000.

New York, N. Y.—The Cycle Spring Spoke Co. has been incorporated; capital, $50,000. Directors: Charles A. Hussey and C. E. Runk, New York City; Joseph H. Niles, Brooklyn.

Rochester, N. Y.—The Bicycle Supply Co. have been incorporated by George C. Whipple, Albert M. Ferguson, William Hawley and Thomas Leahy. Capital stock, $20,000.

Trenton, N. J.—The Daly Bicycle Supply & Mfg. Co. has been incorporated. The capital stock is $100,000, and the incorporators are John P. Daly, Howard W. Daly, Laura E. Daly and Edgar G. McDermott, all of Savannah, Ga.

Wild Rose, Wis.—John Waala, Hardware, sporting goods, etc., has opened up new store.

Changes and Improvements.

Boise, Idaho.—Bibbens & Brown, bicycle dealers, have been succeeded by E. C. Bickford & Co.

Bonham, Tex.—N. N. Nunn & Co., bicycles, reported to have sold out.

Chicago, Ill.—The Illinois Cycle Works have certified to a change of name to the Peerless Specialty Co., and of change of object.

Chicago, Ill.—The American Cycle Supply Co., bicycle sundries, W. J. Wiley retired.

De Graff, Ohio.—J. E. Swank, bicycles; gone out of business.

Delavan, Wis.—C. A. Clark, bicycle dealer, has been succeeded by Clark & Hughes.

Grand Junction, Colo.—Charles Van Horebeke, bicycles, etc., style changed to Horebeke & Fluke.

Indianapolis, Ind.—B. Koehring & Son, Hardware, bicycles, etc., have been succeeded by C. Koehring & Bro.

Niagara Falls, N. Y.—Davey & Cain, bicycles, succeeded by W. H. Davey.

Oskaloosa, Iowa.—Ira L. Thomas & Co., bicycle dealers, have been succeeded by Myers & Stevens.

Richmond, Ind.—Bennett & Bennett, bicycles, succeeded by John M. Bennett.

Springfield, Mass.—A. H. Tennis, of New York, one of the partners in the recently organized Warwick Wheel Co., and sole agent of their product, has established an agency in this city, at the corner of Worthington and Dwight Streets, in the Whitney building. Fred Garrison has charge of the local agency.

Springfield, Ohio.—The Springfield Rubber Tire Wheel Co.; rubber tire department has been sold to New York capitalists. This sale does not include the roller-bearing axle department.

Recent Embarrassments.

Adams, Mass.—The Mannesmann Cycle Tube Works have filed petition in voluntary bankruptcy, in New York. It is reported that the company owe more than $414,000.

Recent Fires.

Washington, D. C.—Fire has almost completely ruined the branch store of the Cleveland Cycle Co., at the corner of Fourteenth Street and New York Avenue, and did damage estimated at $3000.

Rapid Coal-Handling Machinery.

It is no wonder that operators of coal mines usually complain of a shortage of cars at the height of the lake shipping season, for, apart from the demand for cars from other quarters, coal-handling machinery at the docks has rendered the unloading of cars so lightning-like a proceeding that cars cannot be sent back as fast as they are unloaded, and the consequence is often an accumulation of empties at lake shipping points. The latest invention in coal-loading machinery has made it possible to a load a vessel of 6,000 tons capacity within the limit of twenty-four hours, whereas two or three years ago, and by old methods, the greater part of a week would have been required to do the work. R. J. Mefford, superintendent of the Hocking Valley docks at Toledo, speaking of these modern facilities, says: "All records were overtopped by the Hocking docks in Toledo recently by the use of the rapid coal-loading machine when the steamer Superior City, of 6000 tons capacity, arrived at the dock for coal. She commenced loading at 6.15 A.M., and finished at 11.45 P.M., receiving a total of 5923 tons. Allowing two hours delay for dinner and supper for the workingmen, this shows an actual working time of 15½ hours, or at the rate of 382 tons per hour for the total time. For the day's work of 11 hours there were loaded 175 cars of 432 tons per hour. When we consider the short time since 1000 tons were considered a big day's work, we can realize the remarkable advance in the facilities of this business."—*Exchange.*

How Pulp Ware is Made.

Pressed wood pulp ware is said to be gaining favor as a substitute for certain grades of china, glass earthenware and even wood and metal. One firm in Thetford, Eng., has produced and sold within the past two years over 2,500,000 articles of this kind; including 50,000 water carriers supplied to the British government.

The raw material for the Thetford factory comes from Norway and Sweden. After being ground and wetted it is stored in vats, whence it is forced into a tank and then taken out and moulded into forms having a rough outline resemblance to the finished article. These shapes of loosely formed pulp are then treated in the hydraulic presses. These apply the first pressure, with the object of compressing the pulp and hardening the surface of the ware. From the presses the goods are taken to a large drying shed, where any excess of moisture is removed by the action of the atmosphere.

The shapes, when dried, pass to the embossing rooms, fitted with a number of presses by which the pulp is still further compressed and the surface still more refined. The amount of pressure required varies from five tons to twenty tons according to the size and weight of the article being made. The next process is the cutting and trimming, this work being done by machines which at a single stroke cut away all superfluous material.

The finishing of the articles then begins. They are placed in ovens to be indurated or hardened, and much of the life of pulp ware depends upon the thoroughness with which this is done. Next in order come the enamelling or surfacing processes, also carried out in the ovens, the result being the hard, washable and smoothly-glazed skin unaffected by acids, which forms so indispensable a feature of pulp ware goods. After being colored or decorated, the ware is ready to be packed for shipment to the market.—*Exchange.*

We have received from the Harber Bros Co., Bloomington, Ill., a copy of their catalogue No. 28, showing and describing their line of farm machinery and wagons.

Hardware Business For Sale.

HARDWARE business for sale, thirty-five miles from New York City. Chance for an energetic man. Price low. Satisfactory reasons for disposing of same. Address H. O. G., P. O. Box 2383, New York City.

AN exceptional opportunity to buy a Hardware stock of about $10,000, in a city in Massachusetts of over 64 000 inhabitants. Satisfactory reasons given for selling. Address BIGELOW & DOWSE CO., Boston, Mass.

EXCELLENT opportunity to buy out an up-to-date Hardware store with a fairly moderate capital. Address "EXCELLENT," care HARDWARE Publishing Co., No. 143 Chambers Street, New York.

FINE opportunity to purchase an old-established stand within ten miles of Boston; 38 foot frontage, rear entrance. Stock well selected of builders' and shelf Hardware. Fair bicycle trade and good opportunity for adding bicycle repairs. Owners moving away reason for selling. Address "UNUSUAL OPPORTUNITY," Box 167, Boston, Mass.

HARDWARE, coal and lumber business in a town of 3000 population. No other Hardware store or lumber yard within ten miles. Inventory January 1, 1890, $10,000. A rare chance to right party. Address J. C. SENDEL, Weatherly, Pa.

A NICE, clean stock of Hardware, located in one of the largest and most thriving towns in New England, is offered for sale on account of the owner's poor health. The business has been established twenty years; is in the best location in the town, and in a thrifty condition. The stock will invoice at about $10,000. To a party with the cash it offers a splendid opportunity. Address A., care HARDWARE, No. 143 Chambers Street, New York.

A COMPLETE stock of Hardware, saddlery, stoves and tinware. Business well established in a live town and prosperous country. Address A. B. C., care HARDWARE, No. 143 Chambers Street, New York.

A COMPLETE stock of Hardware, stoves and tinware, paints, oils, plumbing and tinning, steam and hot water heating; water works now going on, can have the tapping of mains. Established ten years and no opposition. Right party can make $1500 per year over expenses. Nearest Hardware, ten miles in a thriving town in Pennsylvania. Will sell property if wanted or will rent reasonable. Reason for selling, going to retire from business. Address Box 92, care HARDWARE, No. 143 Chambers Street, New York.

English Patent for Sale.

EDWIN G. BENNETT, patentee and manufacturer of the "Boston Cold Storage" Butter and Cheese Cutters, notifies us of his desire to dispose of his English patent on this article. As a ready sale is being found in the United States for this cutter, which we believe enjoys the distinction of being the only tool of its kind on the market, it is reasonable to suppose that the foreign sale should be equally satisfactory. All inquiries should be addressed to E. G. BENNETT, No. 2 Parlin Street, Everett, Mass., U. S. A.

Patent for Sale.

ICE-SCRAPER or Shredder Patent for sale. Best and cheapest hand device yet made. Address "PATENTEE," care HARDWARE, No. 143 Chambers Street, New York.

Agency Wanted.

EXCLUSIVE agencies for patented articles in the Hardware specialty and novelty line. SPERRY & ALEXANDER, No. 10 Warren Street, New York City.

A PARTY with many years' experience on the road, and who has a first-class agency for the United States, would like to add one or two more lines, or would join with another who has good agencies. Address B., care HARDWARE, No. 143 Chambers Street, New York.

MANUFACTURERS' AGENT, with well located store in machinery district in New York, would like to hear from manufacturers wanting a reliable representative; have an established trade and years of experience. Address GEO. W. CHURCH, No. 183 Greenwich Street, New York.

Foreign Agency Wanted.

A GENTLEMAN with large experience and with good connection in all the principal towns in Newfoundland, is prepared to undertake additional agency in Hardware trade; good testimonials and references from firms represented. Address GEO. B. PARSONS, P. O. Box 331, St. Johns, Newfoundland.

English Agency Wanted.

A GENTLEMAN who has been in the Hardware and cutlery line in England for twenty-five years wishes to represent American houses in light iron and steel line, patented novelties, etc., or the sole sale for England on his own account. Address Box 96, care HARDWARE, No. 143 Chambers Street, New York.

Agency Offered.

WE would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, No. 143 Chambers Street, New York.

WANTED agents to handle a patented, labor saving device of universal sale; investigation solicited by men who desire quick returns from a legitimate, profitable business. Address (C) BURR MFG. CO Cleveland, O., 823 Society for Savings.

Business Chance

FOR SALE—A complete table cutlery plant, with up-to-date machinery, all of which is nearly new, and in good order for immediate operation. A splendid opportunity for a few practical cutlery men, with limited capital, to build up a paying business, as the entire product can be sold on contract in advance.

For terms and particulars, address

J. B. WHITEHEAD,
Assignee National Cutlery Co.,
Rockford, Ill.

Attention, Salesmen!

SALESMEN on uncovered ground can add hose, tires and full rubber line. Free samples. Cash commissions. Protected ground. One salesman earned $3900 in 1898. MINERALIZED RUBBER CO., New York.

Attention, Manufacturers!

FIRMS contemplating going into the enamelling business or wishing a new formula to enable them to add to their present lines in one or two coated ware, are invited to correspond. Highest references. "EXPERIENCED ENAMELLER," care HARDWARE, No. 143 Chambers Street, New York.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

Digitized by Google

Pearce's Improved Cahoon Patent Broadcast SEED SOWER

Is as much superior to any other device for sowing grain as the modern electric light is better than a tallow candle. The **CAHOON** is not the lowest priced seed sower, but taking into consideration the durability of the machine, the ease with which it is operated, and the quality of its work, it is the cheapest. Pays for itself every day that it is used Sows all kinds of grain and cleaned grass seed; does five times as much work as can be done by hand with two-thirds the amount of seed, and does it better than it can be done in any other way.

Dealers who handle the **CAHOON** make a profit and a satisfied customer at the same time. They stay sold. A prominent Hardware dealer in the South wrote us under date of February 13, '99: "We are not handling any other broadcast seeder similar to yours. Tried this some years ago and got enough of it."

Retail dealers supplied at factory prices promptly by our wholesale agents at all principal distributing points. . . . . .

NEW YORK OFFICE, 10 WARREN STREET.

GOODELL COMPANY, - ANTRIM, N. H.

CELEBRATED **"HEINISCH"** SHEARS.

Judge Townsend of United States Court has just granted an accounting and

INJUNCTION

against H. Boker & Co. of New York City restraining them from using the name **HEINISCH** or **H. C. HEINISCH** on shears in any way which will interfere with our trade name.

We respectfully inform the trade of our determination to protect our rights and all persons found selling shears bearing any imitation of our Trade-name will be held strictly accountable for their acts.

Very Respectfully,

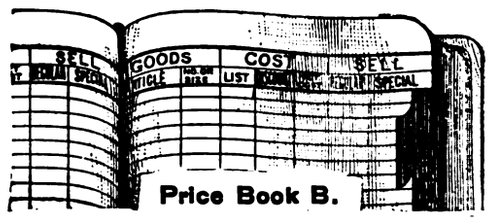
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



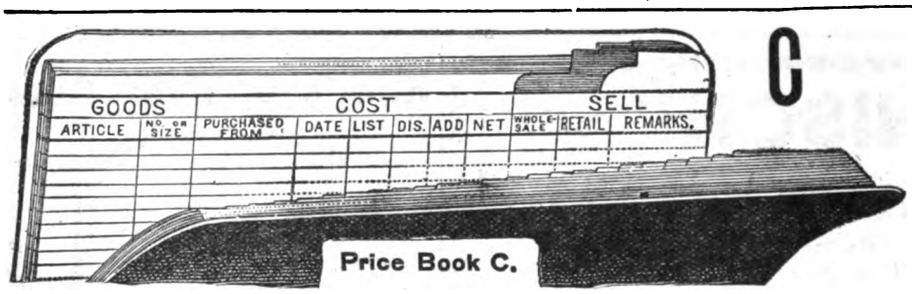
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

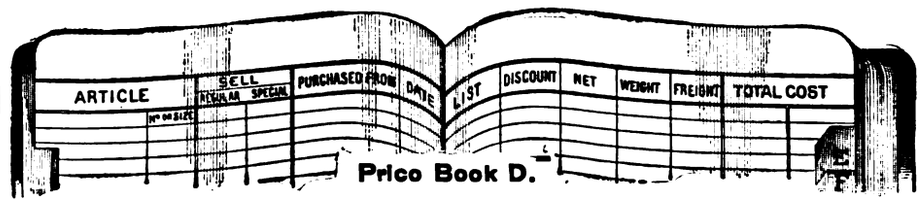
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

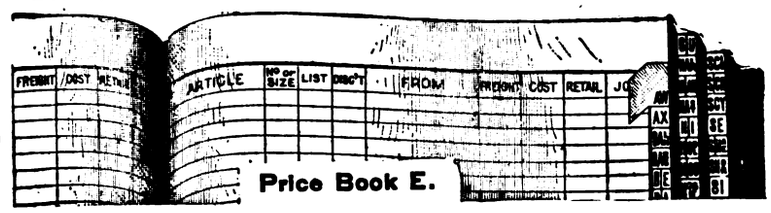
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to AU	For Chisels,	turn to CHI	For Iron,	turn to IRO
" Parers, Apple	" PAP R	" Cutlery,	" CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

WHY IS C. E. JENNINGS' NEW AUGER BIT No. 1½

THE BEST BIT FOR WOOD BORING IN THE WORLD?

Because: There are good bits made for **hard wood.** The L'Hommedieu Ship Bit is an excellent tool for this purpose, but it is not designed for fine cabinet work or soft wood. There are good Bits for Soft Wood, but fail when used in **hard wood.** We have combined two **principles in one,** and think we have solved the problem of putting a bit on the market that is suitable for all around use. Prices furnished the Trade on application.

UNIVERSAL SHARPENING MACHINES.

HAND POWER MACHINES.

	EACH.
No. 2, Japanned,	$3.50
No. 4, Nickel-Plated	$5.00

For household and general use.

FOOT POWER MACHINE.

No. 1, $25.00 each

For Packers, Tanners, Butchers, Farmers, Hotels and Restaurants.

Liberal Discount to the Trade.

Most perfect knife sharpener made.

Easily operated and quick work.

The degree of perfection attained by the use of this machine is far superior to that accomplished by the ordinary method of hand work.

These machines are practical, based on correct mechanical principles and have reached their present state of perfection after many years of experimenting.

They are simple in their construction, very durable and sharpen with great rapidity.

Knives keep their proper shape and last much longer when sharpened with the "Universal" machine. Silver-plated knives can be sharpened without damaging the blade.

Every dealer and every family should have one of these machines.

We guarantee the "Universal" machine to be as we represent it, "practical, convenient and perfect."

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Where Will Combination Lead To?

It would require a philosopher, who also possessed a gift of prophecy, to point out, at this time, just how important and far-reaching will be the results flowing from the mighty combinations of capital now being formed. That great changes will occur in the character of business affairs because of them is conceded, but we believe that few realize how tremendous is this movement, while even fewer understand that a veritable revolution in commercial and manufacturing methods is going on, and that this is not a spasmodic effort that can be headed off by words of opposition, or whistled out of sight by the framing of some bill to be passed in a State legislature. The causes that lie under this revolution, and the things that are to come because of it, are not to be lightly discovered by the surface politician, or disposed of in a line or so of type, by the newspaper paragrapher. They are profound questions for the philosopher and thinker; for the statesman and the jurist; for those only who can search out the sources of things, and evolve the final effect from the primal cause. They are found in the economic situation; in the laws—not of legislatures, but of supply and demand; in far-reaching policies, and not in mere politics; in the relation of America to the trade of the outside world; in the best use of the raw materials which nature has scattered over our land with such liberal hand; and in the full utilization of the fact, that America has the machines by which the demand of the entire world can be almost filled, and also possesses the men by whom these machines were invented and built; in the fact that new sources of motive power are being developed and employed, and in the further great fact that in economics, as in nature, nothing can, for even a moment, be at a standstill.

It would be a venture far beyond the knowledge or courage of the average man to guess as to the height this sweeping wave will rise, or the results that will be forced because of its tremendous power. These are questions that time only can answer. There are many thoughtful men who have their fears for the future; many who, having the good of their land at heart, fear the ruin that may come when the wave recedes—and these men are by no means anarchists or cranks. Those who are rushing forward with such merry swing—who see no danger, and paint fairy scenes before the eyes of the manufacturer, or merchant or mine owner, who is to be taken into the fold—may be excused for their optimism; they are making their fortunes in getting others together, and in the sale of stock to the confiding public; but will these gentlemen be on hand when the stock is all disposed of, and the great combination turns itself to the serious consideration of paying dividends on that mighty output of stock?

"The Other Fellow."

"Go over and see 'the other fellow' and talk to him," said the president-elect of the Missouri Association of Hardware Retailers, in a speech the other day. Here is a meaty text for a sermon; and, what is more to the point, a suggestion for such practical action as will pay any man who is compelled to do business in this uncertain world.

"The other fellow" has *his* side of the case, and nine times out of ten he thoroughly and honestly believes that all the rights are on his side. You naturally feel the same as to your side, and there is a chance here for a warm little row, if one or the other loses his temper and fires a hot and unpremeditated letter or telephone message across the way. There are two barrels of mental gunpowder on Blank Street, one on the right side and the other on the left, and a very small spark dropped into either of them, will produce a big explosion.

How nicely the whole matter can be arranged, if "this fellow" puts on his hat and runs across the way, and makes a pleasant morning call upon "the other fellow," or the two meet by appointment for luncheon at the restaurant or the club. They are both gentlemen by instinct and education; neither one has a desire to get the better of the other; their interests are largely identical, if they but knew it; and the mere coming together in social intercourse, paves the way for amity, and leads up to explanation or compromise. In what a different light that little transaction looks, when "the other fellow" sheds upon it the rays of his knowledge, and reveals it in the light of his undeniably honest intentions! How the black marks that stirred your bile, disappeared under the illumination of explanation, and how easily you are led to see *his* side of the case, while under the influence of his genial presence! And when you shake hands at the doorway, or part at the street corner, each "fellow" goes away feeling that "the other fellow" is white both outside and all the way through; and each, unconsciously perhaps, felicitates himself upon having secured

Digitized by Google

a friend, where he might have been hampered and burdened by the addition of an enemy.

Yes, it is a mighty good thing to go over and see "the other fellow." And there's money in it, too.

Do the retail Hardwaremen of the East and South realize how thoroughly they are being distanced by their brethren of the West, in the formation of State associations? While Ohio, Indiana, Michigan, Minnesota and North Dakota possess active organizations that have done much good to the trade; while Wisconsin, Iowa and Missouri have followed in their wake, and while all are at work for the common good of the West, why do Pennsylvania, New Jersey and New York stand idle? What is the matter with Maryland, Alabama and Georgia? Why do not the men of Maine come together, the sons of Vermont clasp hands, and the children of New Hampshire show that they are filled with life and patriotism? When an organization shall have been completed in each State, the next step —and an easy one, too—will be the formation of that long-deferred National Association of Retail Hardware Dealers.

Recent Trade Publications.

The Parry Mfg. Co., Indianapolis, Ind., have certainly adorned their "Cuban Belle" in a manner befitting even that beautiful representation of American art. That this Cuban Belle happens to be an attractive buggy made by the Parry Mfg. Co,, does not in any way detract from the attractiveness of the article, or the beauty of its setting. The above refers to a very artistic publication which we have just received from this company, bound in covers of red, black and green, and artistic in the highest sense. The Cuban Belle is one of the recent productions of this great concern, concerning which they say that it has many good points, but that the best one is that they made and sold 14,327 of them during the year 1898, and that the orders coming in now point to double that figure for 1899.

F. E. Myers & Bro., Ashland, Ohio, the well-known manufacturers of pumps and hay tools, have issued their catalogue No. 33, upon which is stamped the sub-title of "Jobbers' Specialties." This is a catalogue of near one hundred pages, showing their haying tools, hay carriers, hay forks, steel tracks, pulleys, slings, spray pumps, windmill pumps, power and tank pumps, store ladders, bicycle stands and gate hangers, all of which come within the stock of a jobber, and the reputation of which have been established by years of successful use. The catalogue is thoroughly illustrated, sizes and prices accompanying the descriptions. The frontispiece is a reproduction of their Centre Street works, which cover their wood-work department and specialties, which buildings were added in 1896.

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., have issued an attractive catalogue for 1899, showing their fine single-shot target and sporting rifles, single-shot pistols, shot guns, sights and fine mechanical tools. This little work is thoroughly illustrated, and with full letter-text in which sizes and prices are given. It is a compendium of useful information for all dealers who are interested in lines of goods of this character.

Reynolds & Co., New Haven, Conn., manufacturers of screws, bolts, nuts, etc., have arranged with Topping Bros., No. 92 Chambers Street, New York, to carry a full line of their set and cap screws, and to represent them so far as these goods are concerned in this territory. Topping Bros. will be prepared to fill all orders of ordinary proportions from stock without the slightest delay and at the lowest market rates. This change has been made for the accommodation of the trade in this section.

Improvements in the Hardware Club.

Some weeks since, steps were taken by the board of governors of the Hardware Club of New York, for the adornment of the club rooms, and the work was committed to the hands of the house committee, consisting of Messrs. Eugene Bissell, James D. Foot, Arthur G. Sherman, Edward C. Van Glahn and J. Leonard Varick; and to this committee was added Thomas F. Keating. These gentlemen have exhibited no small degree of good judgment and taste in the changes which have been made in the club rooms, and when the work was finally completed, on Monday, May 1st, the expression of pleased approval on the part of the members was practically unanimous.

The fire which occurred in the Home Life building next door, had made the re-carpeting of several rooms necessary, and new carpets are therefore found upon the ladies' reception room, the main hall, the foyer hall, the library and the board room. The side walls in the cafe have been covered by carton pierre, and the ceilings covered with a heavy canvas which has been profusely decorated. The two small dining rooms, the passage from the cafe to the large dining room, and the entrance to the hall, have been repainted. In the office hall, the ceiling has been decorated and divided into panels with relief mouldings. The walls have been painted in a reddish tone, and a wainscoting placed about the entire hall. In the foyer hall, the ceiling has been enriched by the application of carton pierre relief ornamentation, and decorated in a rich and effective manner, while the side walls have been covered with pegamoid leather in red, and a paneling wainscoting supplied around the entire room. An elaborate grille has been put up in the large opening between the foyer and the office hall. The ceiling of the committee room has been decorated, and the side walls covered with a Japanese paper. A paneling wainscoting has also been supplied. The library has been finished much in the same manner, in a shade of green, the walls being covered with a rich embossed paper. The parlor has been treated in the same manner, with the exception that the side walls are covered with a Japanese leather paper, and in the ladies' dining room effective results have been made by a combination of papier mache and carton pierre relief work, with adornments in ivory and gold leaf. In the ladies' reception room, a most artistic and beautiful effect has been secured, the entire room being enriched by the application of carton pierre and papier mache, while new woodwork, white curly maple has been supplied. The entire work has been decorated in oil, the panels papered with an imported French paper, and a mirror set in the central panel of the west wall.

A number of new chandeliers and side bracket lights have been supplied. The effect of the whole work is rich and artistic in the highest sense, and the universal expression is one of pleased satisfaction on the part of both members and visitors.

Schoverling, Daly & Gales New Home.

Schoverling, Daly & Gales feel very much at home again after their year of temporary residence at No. 325 Broadway. They are now in their old neighborhood, on Broadway between Reade and Duane Streets, in the Vincent building, at Nos. 302-304 Broadway, and No. 94 Duane Street. They occupy the ground floor, basement and cellar of this handsome new structure, and upon a site that has been devoted to the gun business since 1840. Their quarters have been handsomely fitted up for the special purposes of their business, and the store is light and attractive. Stock, packing and shipping rooms are located in the basement. The offices are in the rear, in an L running back from Duane Street.

The United States have issued a total of 616,441 patents.

Digitized by Google

No Hardware Combination Formed.

As a specimen of the manner in which misinformation can be carefully collated and sent broadcast throughout the land, attention might be called to an article which appeared in a recent issue of a New York daily, to the effect that Charles R. Flint, of this city, had succeeded in organizing a combination among the manufacturers of builders' Hardware, with a capital stock of $40,000,000. The mere fact that no steps whatever have been taken in this direction; that Mr. Flint has not organized such a combination, and is not engaged in such organization; and that the leading manufacturers who are mentioned in connection therewith, know nothing about such a movement, may suffice to show that the rumor was without foundation, although it is very difficult to discover what people will not believe in regard to combinations and trusts, in these exciting days.

The statement, which seems to have had its inception in Boston, was to the effect that the Branford Lock Co., of Branford; the Yale & Towne Mfg. Co., of Stamford; P. & F. Corbin, of New Britain; the Russell & Erwin Mfg. Co., of New Britain; the Lockwood Mfg. Co., of South Norwalk; the Norwalk Lock Co., of South Norwalk; the Mallory Wheeler Co., of New Haven, and the Niles Lock Co., o Chicago, were in the deal. The fact of the case is that some years ago Mr. Flint did take steps toward an organization of this character. Nothing came of it then, and it has not since been renewed in any tangible form.

A representative of *Hardware*, who has seen the executive officers of several of these concerns, has been informed emphatically that none of them knew anything concerning it. George J. Laighton, president of the Russell & Erwin Mfg. Co., said: "I know of no such combination, and nothing of the kind is on foot, and we hardly believe that an organization of this kind could occur without our knowledge."

Henry R. Towne, president of the Yale & Towne Mfg Co., was equally emphatic in his statement, which was endorsed by several representatives of the other concerns named.

It is a fact that some time since a number of Hardware men of this city met at the Wadorf-Astoria, for the purpose of taking steps looking toward an organization among the Hardware jobbers of New York City, in the form of an association for social purposes, and friendliness among themselves. On that evening Mr. Flint happened to be in the hotel, but did not meet with the Hardwaremen or have any consultations with them. Perhaps some enterprising reporter jumped at conclusions.

Another source of the rumor may be found in the fact that there has recently been held a meeting of the five largest manufacturers of builders' Hardware, at which it was unanimously agreed to advance prices ten per cent. These concerns were the Yale & Towne Mfg. Co., Sargent & Co., the Russell & Erwin Mfg. Co., the Reading Hardware Co. and P. & F. Corbin. The Penn Hardware Co. was invited, and expected to be represented, but on account of the illness of one of the officers, nobody from that concern was present. although they have heartily given their adherence to the step that was taken. This action, when brought to the attention of the other manufacturers, was almost unanimously endorsed, and letters and telegrams from the greater portion of them have been received to that effect.

In illustration of the amount of misinformation that can be crowded into an article, the fact may be pointed out that the Branford Lock Co., who were quoted as a portion of the mythical combination, have been out of business for six years past, and that their works have since that time been a part of the manufacturing plant of the Yale & Towne Mfg. Co. The Russell & Erwin Mfg. Co, are quoted twice, once as of New Britain and the other as of New Haven; that the Mallory-Wheeler Co. have practically retired from the manufacture of builders' Hardware; that the Niles Lock Co. went out of existence years ago, when their business was absorbed, and has since been carried on, by the Chicago Hardware Mfg. Co. This shows the danger of attempting to discuss a subject without having thoroughly investigated and verified the same.

The above advance of ten per cent. on builders' Hardware has been received by the trade generally, as only a proper step in connection with the recent advances of raw material, and from the fact that these goods have not brought such prices in the market as would place them in proper relation with other features of the Hardware manufacturing trade. Increased competition and the recent dull times have caused some articles in these goods to be manufactured at less than cost, and it is very doubtful whether the advance above referred to is even yet sufficient to bring these various articles of builders' Hardware up to their proper position in the trade.

Complimenting Our Special Issue.

W. S. Wright, Rector & Wilhelmy Co., Omaha, Neb.: "I want to compliment you on that souvenir edition. It reflected not only an unusual amount of credit on your effort and enterprise, but the good judgment displayed in the making up of the paper, made it especially valuable. I have not, in a great many years, read a newspaper as thoroughly, and enjoyed it as fully, as I did this."

John Bindley, Bindley Hardware Co., Pittsburg, Pa.: "Please accept my congratulations upon the beautiful Anniversary Edition. It is not only creditable to you, but in conception and execution a handsome compliment to the great Hardware interest, and, as such, will be appreciated. May your light grow in brilliancy, ever extending its rays."

Biddle Hardware Co., Philadelphia, Pa.: "We have looked over your special Hardware Jobbers' number, and certainly think it a very creditable production, and think you are deserving of praise, in having the support of so many well-known Hardwaremen."

C. Merchant, Merchant & Co., Philadelphia, Pa.: "I desire to congratulate you upon this Jobbers' issue of your journal, which is one of the most readable and interesting it has ever been my good fortune to see."

Merchant & Co., Inc., of Philadelphia, New York and Chicago, report a heavy increase in tin and babbitt metal business. They have recently taken, among numerous others, a carload order for babbitt metal from a large Western machinery manufacturing Company, the shipment consisting of an assortment of grades. This order was placed after an exhaustive list of samples from a number of manufacturers. This company has been manufacturing all grades of this metal for a quarter of a century, and their present large business in this line is a fitting tribute to their thorough experience and reliability in its manufacture.

The Gray & Dudley Hardware Co., Nashville, Tenn., write us as follows: "Some party, unknown to us, representing himself as R. M. Dudley, Jr., has imposed on some Eastern and Northern manufacturers, drawing drafts on us. The party is described by one manufacturer, who cashed his draft for $250, as being a young man, medium height and size, dark hair and moustache. There is no such party as R. M. Dudley, Jr."

Commerce of the United States with Cuba, Porto Rico, Hawaii and the Philippines already shows signs of revival. The February report of the Treasury Bureau of Statistics shows that in nearly all the articles which we have been accustomed to export to those islands there is a marked increase, while in many articles, our own imports from them are showing a corresponding increase.

New England Hardware Notes.

When traveling in the old country, an American business man is interested to notice the number of houses whose names and business descend for generations in the family of the founder. Hardware dealers need not be very old to know well certain English houses whose most precious possession, next to the unvarying standard of their product, is the original name under which, a hundred or more years ago, it may be, the modest enterprise was started, which made itself felt all over the world.

In this country such legacy of business activity, coupled with a founder's name, is rare, as might be expected where all is so new. There are a few such instances in the East. It is perhaps quite as rare to find the same premises occupied year after year by the same business, though the continuation of that business has been due to the successive purchases of stock and good will by new parties, rather than by family descent. It is doubtful whether there is a more conspicuous example of persistence of character of business dissociated with family or co-partnership descent, than in one case in Boston.

At least, as early as 1796, which is as far back as records can be consulted, one Joseph Scott, Jr., was in the Hardware business in Dock Square. That was the day of small things. Boston numbered scarcely more than 15,000 inhabitants. Of the buildings then existing scarcely any now remain. Faneuil Hall was there, but not the present Faneuil Hall, which was built in 1805. The historic Old State House was there, but in quite different shape from that which it now has. In place of the long granite Quincy Market, for so many years and to this day justly the pride of Boston, were arms of the harbor, so that the bowsprits of vessels overhung the street directly opposite Faneuil Hall. The old Hancock Tavern, in whose quaint rooms the famous members of the Boston Tea Party donned their Indian accoutrements and went forth to spill the tea in Boston Harbor is within a few rods of this store.

A few years later, in 1800, the records show that the Hardware business was still carried on at this store, but the proprietorship had changed to that of John Odin. Through all the trials of the earlier years of this century, of the embargo, which must have been so hard to bear in a New England seaport, and the vicissitudes of the war of 1812, up to more prosperous days, the business appears to have been actively carried on, for in 1825 the records show John Odin still there, engaged in Hardware selling. In 1829, after a continuous occupation of twenty-nine years, John Odin was succeeded by T. W. Haskins & Co., and Dodge & Vinal, through short terms. In 1842 Otis Vinal became sole proprietor of the business, in which he was markedly successful, for eighteen years. Failing health obliged him to relinquish business cares, and in 1860 he disposed of the stock and good will at the old stand to Messrs. Burditt & Williams, whose fortune it had been to round out the century of the old store in the Hardware business. Their term of proprietorship far outruns that of any of their predecessors, so that they can now look back upon a business career there which extends over more than thirty-nine years. It is not to be supposed that an active house could exist and grow without extending the confines of its original premises. By several additions of neighboring stores the area used by them has been made to largely exceed that of the early years, and outside room is required. But the original spot, hallowed in the eyes of any Hardwareman who possesses sentiment, by so many years of activity and change, is still the central core of their business habitation.

From its earliest years, the house of Burditt & Williams has given its particular attention to the furnishing of fine Hardware for public and private buildings. It is scarcely more than thirty years ago that Boston, through several excellent private manufactories, was recognized as the headquarters of the country in the invention and manufacture of the best locks, knobs, sash fasts and other articles comprised in the detailed Hardware of buildings, the mechanism of which ministers to the convenience of the occupants. When the large Hardware manufacturers of the country turned their attention from the commoner productions, which only up to that time had been brought out in quantity, and to study the possibilities of the manufacture of the higher class of goods heretofore confined mostly to hand work, Messrs. Burditt & Williams, through their familiarity with the hand made goods, were able to give some of these manufacturers valuable assistance in the selection of what was most useful and desirable. Their skill and ingenuity were employed in producing goods of fine mechanism, to which was added the artistic outward appearance which so distinguishes the Hardware of the present day from that of earlier years. This improvement in Hardware has attracted the taste of buyers, and has added enormously to the demand for the better class of articles. It is in the meeting of this demand that Burditt & Williams have most notably developed their business, so that in their capacity as representatives of P. & F. Corbin, one of the largest manufactories in the world of this class of Hardware, they have become especially known throughout New England.

This is a country of frequent changes. The future of business locations can perhaps be less easily predicted in a city of the Uuited States than in any other country. But this record of continued, successful and increasing business activity in one location in one of its great and growing cities is sufficiently unusual to merit a passing chronicle.

The regular monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on the evening of Wednesday, May 10th. The reception begins at 4:30 P.M. and dinner will be served at 5:15 P.M. The subject for the evening will be a continuation of that broached at the two preceding meetings, as to the ways and meaus of making it a stronger business organization. Reports from the various committees appointed to investigate the matter, and a statement of progress, will be submitted.

Business conditions for New England are continuing to show a most lively and satisfactory aspect. All lines are reported as brisk, and prices are still tending upward. A marked shortage in the supply of wire cloth and poultry netting is apparent. The stocks in hand are inadequate, and jobbers have been notified by the manufacturers that they must not rely on being able to obtain more than their orders already call for. One order which recently came to the writer's notice was from a manufacturer of wire screens, calling for a carload of wire cloth at any price.

Among the sporting goods trade a noticeable revival is marked in lawn tennis goods. This sport, which in the past two seasons has somewhat receded in popular favor owing to the introduction of golf, seems to be coming back to its former position. The bicycle trade is brisk, and owing to the reduced prices, many of last year's models are being replaced. There seems to be a wide diversity of opinion regarding the popularity of the chainless wheel. One prominent dealer expresses the opinion that ninety per cent. of the wheels being sold are of that variety, while another equally prominent dealer puts it quite the other way.

FRED A. CATON.

Boston, May, 1899.

The New York office of the Mallory, Wheeler Co., New Haven, Conn., has been removed from No. 18 Murray Street to No. 38 on the same street, which is near Church Street. It is under the direction of Lewis D. Boggs.

THE QUESTION OF "TRADE REFORM"—II.*

The manufacturer finds it hard to dispose of his large products, he has figured down and down, minimized costs, he has taken from labor the last possible farthing, he does not want his plant to remain in idleness and disuse, he has a most kindly feeling towards labor—labor created his wealth, labor encouraged by demand builded his great factories and he cannot turn it adrift upon the world empty handed and alone; he ponders, hesitates and makes another desperate effort. His surplus stock goes to Mr. Department, at a large sacrifice, often bare costs.

Again the mill grinds and labor finds employment at scarcely living wages, and prosperity's sun apparently shines for the manufacturer, but nay, his job lot sales have cut the gordian knot of your prosperity by building round about you a competitive dealing that reads ruin to him who follows it. Again comes hesitation, reflections, followed by combination of capital, organized trusts, every one a threatening monster. The raw product is controlled, labor is controlled, output controlled, prices controlled and again prosperity's sun apparently shines for the Trust.

But there is no warmth for you, gentlemen, no warmth for labor, no warmth for the man who stands as the guardian of the little stocks to be dissipated among the consumer.

CATALOGUERS AND DEPARTMENT HOUSES.

Gentlemen, much as I dislike to do so, I must charge upon the manufacturer and wholesaler the creation of the cataloguer and the department store, and I shall not say one word against either of the latter gentlemen as men, but it is of the systems in vogue in their business of which I shall speak. The cataloguer's offense lies chiefly in the deceptions used to place his wares before and into the hands of the consumer, in advertising as genuine articles that have no particle of genuineality about them, advertising low grades as high grades and in a general deception in trading, the department store "bearing" the labor market by the employment of women and child labor, and by the very system of their penurious wage scale often driving them to the committal of larceny and to a worse shame.

Looking ahead for a few generations under these conditions, under this ordeal, what will be the future wife and mother? These things cry to high heaven for a reformation. That the flower of the world, fair woman, because she needs must work, shall become polluted in these curse spots, God forbid. If the department stores are the causes for much of this, then, if for no other reasons, I say, away with them, it is better to serve humanity than mammon.

I have no objection to the employment of women. I have no objection to their becoming bread winners; no objection to their studying medicine, reading law, becoming practitioners or pettifoggers; but if you employ them to do man's work in store, office, counting-room or where you will, then give them man's wages, if they perform man's service. Do not make them bread winners upon a wage scale that forces them to prostitution and to shame. Ill does it become the Christian man that hires young women and girls for $2 to $5 per week, and sees his fellowman, strong, able, capable and willing to work, going about the streets in idleness, just because he can make money by doing so.

Man should be the bread winner of the world; God so intended it. How long would these department stores live and do business, if forced to hire labor from God's intended laborers, or pay an honest wage scale to women? Not long; and in their stead would come thousands and thousands of smaller stores officered and managed by men of lesser means, giving employment upon a better wage scale. You would see vacant stores peopled, rents advancing, dormant real estate improve, fewer bread winners idle upon the streets; general prosperity would seize hold of surrounding property and business.

But, gentlemen, you, the retail merchants of the country, do not have to deal directly with these influences; nevertheless they concern you and are fast creeping into your larger towns, and are making their presence felt in a thousand racket and cheap-John stores all over the land. You complain of the cataloguer, the picture book trader, the man who steals in upon your customer in the unseen hours, robs you of his patronage and returns but a fictitious value for the good dollars he absorbs. You have a right to concern yourselves, a right to complain. But who makes it possible, the existence of snch a class of business?

The manufacturer and wholesaler. No one else. The great concentration of wealth and business that is going on is pressing harder and harder upon the smaller concerns, forcing them from the legitimate to the illegitimate channels of business; besides the monster manufacturers and jobbers in their avaricious pace are seeking every nook and corner, unmindful of the great disasters it entails. They who should become the protectorate of the retailer are unconsciously pulling him down, farther down, because of the ruinous competition they are building up about him.

How many trusts have been organized within the last two years? How many millions of dollars, aye, billions, have been consolidated into combines and trusts within that time? Almost every day you read of some new combine, some new trust, some octopus, that is bearing down upon honest competitive merchandising and upon you.

ARTICLES NOT CONTROLLED BY TRUSTS.

The Chicago *Tribune* is authority for the following statement:

Just 11 common commodities not under the control of incorporated trusts or wide trade agreements will be left for the people to buy when the prune trust, the buggy-whip trust, and the trusts in derby hats, now being formed, are completed. Consequently people who are contemplating the start of a boycott of their own against the modern concentration of capital must make up their minds whether they can get along on these articles, which are the only ones of daily use whose sale is still unimpeded, and the prices of which are left to fix themselves according to the constantly fluctuating law of supply and demand. All the others but these are controlled by the trusts: Cut flowers, spectacles, millinery, coffee and tea, fruits (except prunes), vegetables, pies and cakes, eggs, butter and cheese, poultry and game, watches and jewelry.

For hundreds of years, since the advent of civilized man, there has always been a mediator, a distributor and exchanger, who parcelled out the larger stocks to the consumer as his wants required. Thus the retailer has ever stood at the gateway protecting the interchange of commodities, doing equal and exact justice to manufacturer, wholesaler and consumer. And he stands to-day where he has ever stood since civilized trading began, and where he must ever stand if our commercial being shall be preserved and made glorious.

* Conclusion of a paper prepared by C. W. Aldrich, commenced in our issue of April 25th.

Digitized by Google

How best to preserve and foster this most important factor, without which the wholesaler must perish and the manufacturer become crippled—this prime factor alone, the greatest element of strength to the commercial world, the man nearest to, the most important to the consumer—is a question for your organization to solve. Upon that solution and the result of your co-operative work depend the perpetuity of legitimate retail merchandising.

The consumer (the producer) became restless under the influences of market depressions; his acres did not broaden, neither did his yield increase, while a constantly lessening price played sad havoc with his earnings; hence he was constantly casting about for a better market for his purchases, and the ever-alluring and gilded advertisement, "Goods retailed at wholesale prices" caught his eye, and he flew from supposed ills to ills he knew naught of. He turned down his best friend, the retail merchant, and embraced Mr. Cataloguer, who would sell him a few staples (as a bait) at cost and take 100 per cent. profit on goods he knew little about.

Another thing brought upon the commercial industries of this country from which we all suffer, is what I am pleased to call the price *Dogma*. From the time you open your stores on Monday morning until you close them on Saturday night, from the rising of the sun on the first day of the year to its setting on the last day, it is a continuous round of price, price. Every customer who enters your stores for any article, great or small, sees nothing, talks nothing but price, price, and quotes the Wards, Fairs, Sears and even your near competitor, as price the only desideratum.

For the last 5 or 6 years you have encountered price 99 times where you have met value once. The manufacturer and the jobber in many cases have gone on the beaten and double beaten track of price, price. Some of the jobbers with stocks made up from offscourings of all creation and job lot town have come to you with a 10 stanza song of price, price. They have assured you there was no business, no prosperity, no salvation unless you got on the price band wagon, yielding to their driving. When you inspected their offerings, the critical eye detected also the Ward-Sear's picture trading goods and if you invested later learned you did not have the trade by the horns but stale chestnuts. Who is to blame for all this? Who is to blame for forcing the issue price upon you, which is not alone dissipating values but your prosperity and the commercial prosperity of this country like the dew before the sun.

Another evil you must contend with, comes from the fierce contest for business. The regular traveler or salesman comes to you with his offerings upon the ground of legitimacy, the specialty man and colporteur seek the trade upon the ground of availability and you find what you were once pleased to call your line of goods or stock in trade disseminated through all the business houses of your city, town, or village. The grocery man has a part, the dry goods man some portion, the druggist, tobacconist and every dealer catches on to a portion, much of it going as prize offerings to carry low grade baking powder at high grade prices and you yourselves have sometimes been induced to encroach upon lines outside Hardware.

To the retailer must come the duty of correction, because of his position in the trade, his close proximity to the consumer, his standing almost at the beginning and ending of commercial transactions. For hundreds of years the retail merchant has been the student of consumption's want; to know the requirements, to prepare to meet them, is and ever has been his mission in trade. More earnestly now than ever before in our country's history must he address himself to the work before him. He must become not only a student, but an artist in the work of rebuilding our commercial industries upon strong lines of perpetuity. His labor must be unselfish and single to the general good of all. His reward, the honest increment of legitimate merchandising. A thousand little vices and ills have crept into the retail business. To correct them requires application, and united co-operation of all.

State organizations, co-ordinate county organizations as aids to State organizations, should be instituted. Several states should constitute a district organization, and from these several organizations should come a National Organization that shall embrace every state in the Union. The evils easily discovered should receive prompt remedial measures which the best minds of your organizations shall suggest. Co-operation with manufacturers and wholesalers, and not antagonism will do much to perpetuate your associations and restore that ever desired reform in present methods of ruinous trade competition.

A few simple laws passed by the States or general government would do much to accomplish these desired results. A law to prevent and prohibit food adulterations; a law compelling the honest labelling and branding of goods. A like law regulating all forms of business advertising, compelling advertisers to live up to the letter and spirit of their advertisements. Each and all of these laws would be just, wronging neither manufacturer, wholesaler, retailer or consumer, and would do much towards a just correction of existing evils without injury to a single honest business competitor.

Another commendable measure is the cash plan for all business transactions. It will give you the benefits of the lowest markets in all your purchases, and in your sales enable you to meet any honest, legitimate competitor. It will strengthen your friendship with all your business associates, and instead of sending your rightful patron to Mr. Department or Mr. Cataloguer, it will bring him to you. Cold cash will do much towards working out a solution of the perplexing questions growing out of unwarranted competition.

The course of every country merchant should be to encourage healthful competition, to further and aid all plans for improving the home markets for our immense farm products. While studying your own interests, you should not for a moment forget the interests of your patron and be ever ready to conserve them. Make his coming a pleasant visit, and his going a cheerful reminder of it. Try to provide comforts for his wife and little ones when they visit town to trade, by adopting some plan of entertainment and shelter. Show him the difference in power of his spot cash and 6 or 12 months' credit. Your patron is not wholly an unreasonable man; he is not without power of conception and understanding, and will listen to your line of argument, and with factors clearly stated will in 90 out of 100 cases yield to your logic.

In all your home competition, in all competition with your neighboring towns and villages, let your every act be one of open-handed honesty. In your co-operative work agree upon a basis of action, a standard scale of fair competitive dealing among yourselves, and among your patrons live up to every line of agreement you enter into, no matter what the cost. Such a policy and such an action will win you more business, more contentment in the business, than any vacillating course you could possibly pursue.

While it is not my province to instruct my peers, in my opinion confining your purchases to a smaller number of reputable business houses will aid you in the good work you are undertaking, and put you in line of better commercial credits. It is not the largest or most pretentious house that you will do the better service. You are not alone in business for your health, but for the purpose of livelihood, the rearing and education of your families, and the accumulation of sufficient to carry you through that sear and yellow period, when man, after a busy life well spent,

Digitized by Google

should have a few years of leisure to enjoy the fruits thereof.

Time purchasings or long datings are not so conducive to the good of retail business as short time, or cash purchases. The house who shall receive your frequent requests for goods followed by prompt cash settlements will the more fully appreciate your business, and be at all times ready to grant you lowest prices. Cash brings you in touch with the best markets of the world.

One of your greatest efforts should be to secure home distribution of the consumer's cash. Every dollar so distributed to a greater or less extent benefits your town, village or city, and directly or indirectly every member of your community; benefits your schools, churches and surrounding farms. Make every effort to build up your home industries, by building up your own business as well as the business of those who contribute to your success.

Resting upon your shoulders to-day is every manufacturer and wholesaler of the country; without your support he totters, falls and perishes from the mercantile world. You are their conservators, and they might as well attempt to fly to the ends of the earth as to do business without your clientage. Their preservation, as well as your own business salvation, is in your keeping. They ought not to be the aggressors, neither should you be the avengers. You can go direct to the manufacturer, importer or producer; the wholesaler can go to no one but the retailer. The wholesaler can successfully look to no one but you, the retailer.

OLD GOODS SHOULD BE CLEANED OUT.

Gentlemen, I would like to urge the strongest efforts upon each member of the retailer family to a clearance, and a continued clearance of all obsolete goods which only encumber your stock and warerooms and to no purpose. A total abolition from your purchases of old pattern and out of date goods, no matter what the price, are means and measures most beneficial to your business.

I would urge you also to taboo every job lot offering, every closing out offering, for no matter how you may turn, no matter what concessions are granted, such purchases do not place you in the line as a competitor with Messrs. Department-Cataloguer who have purchased the fresh surplus stocks of the manufacturer at 10 and 5-10 and 10 and even 20 and 25 per cent. with freight and extra cash discounts concessions. Let the manufacturer turn his job lots into the remelt and let the jobber who sells you rich bargains under one label and your competitor the same goods as a richer bargain under another label, store his stocks for future expanding markets.

Turning to the traveling salesmen, I want to say to you, my fellows, we are as much interested in these questions as any member of the mercantile family. We, who gain our livelihood and support our families in the employment of others, in seeking out the markets for the world's product, and the distributing points for the manufacturer, importer and wholesaler's stocks are as much concerned as any one in the proper solutions of these questions and their proper adjustment. In the prosecution of our respective work we have but one master—our employer—to serve. His bidding is our duty and we must be loyal to the charge imposed.

While discharging the duties incumbent upon us by the sale of our labor, we have two separate and distinct interests to conserve, those of our employers and those of their patrons, both equally important. In trade we must become the journal looking forward to one interest and backward to the other, and as such we maintain the equilibrium, the balance. The best interests of the retail merchant are also the best interests of our respective houses, and when we foster and protect those interests, we are also serving our employers. Whatever there is of middle ground, we stand upon it, and it is the commanding position.

New Quarters of John Chatillon & Sons.

John Chatillon & Sons, Nos. 85 to 93 Cliff Street, and No. 12 Jacob Street, New York, have comfortably settled themselves in their new quarters on the old site, and are now occupying the practically new building, which has taken the place of the one from which they were burned out, in September last.

They have remodeled the building, making it thoroughly fireproof. The second floor, which is one hundred by one hundred feet in size, is entirely devoted to offices and sample rooms. A cut of the structure as it appears to-day is shown herewith.

This extensive and well-known business was established in 1835 by John Chatillon, father of the present owner, George H. Chatillon, who has, for the past twenty-five years, been the active manager of the concern.

Their spring scales and other kindred goods are manufactured in the building, all heavy work, castings, etc.,

being made in the country. In addition, they have a factory at Fulton, N. Y., where, under the brands of Foster Bros., they make a line of butchers' tools, such as knives, steels, cleavers, etc.; and also another factory at Phœnix, N. Y., for the manufacture of pocket cutlery. The high position which this old and yet vigorous concern occupies in the respect and confidence of the trade, has been won by years of enterprise and fair dealing, and by the production of a class of goods that were always first-class, and exactly just what they were represented to be.

Removal of C. E. Jennings & Co.

C. E. Jennings & Co., the well-known manufacturers of mechanics' tools and Hardware specialties, who have been so long located at No. 79 Reade Street and No. 97 Chambers Street, New York, have removed to No. 101 Reade Street, where they have largely increased accommodations for business, and where they will have the added advantage of being on the ground floor of the building. They will always have a fine display of their samples on hand, and the store has been especially fitted up for their use.

The New York office of the Payson Mfg. Co., which has recently been removed to No. 88 Chambers Street, is in charge of Frederick Pfeifer, as manager, who has for a number of years held that responsible position, being well known to the Hardware trade centering in New York and vicinity.

H. G. Welty, Penn Mutual building, Philadelphia, would like to communicate with manufacturing firms who do casting of small novelties in white metal. He has a large contract to let in this class of goods.

There is no pleasure or profit that is enjoyed but is earned by the sweat of the brow.—*Exchange.*

On Filing Rotating Work.

This is a branch of file work that requires nearly as much care to do well as when the piece is held in the vise, and the pointers given below will enable you to get the best results.

In the filing of rotating work, as between centres in a lathe, there is danger of too high a cutting velocity. This is especially true when the diameter of the work is large. The tooth of a file, like any other cutting tool, will give down if made to do its work too fast. As practically all filing of this class is upon work that has previously been

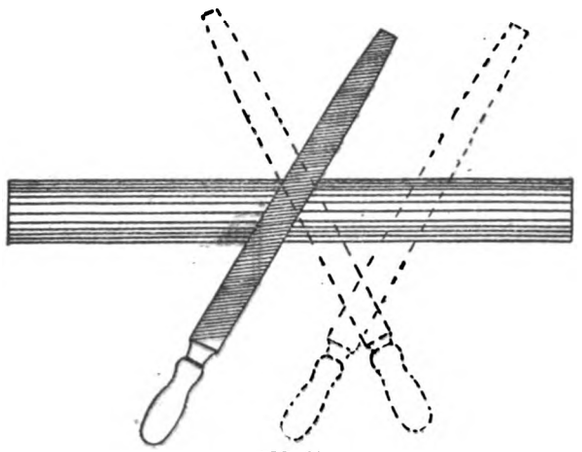

FIG. 24.

machined round and smooth, files coarser than the second cut are little used, the smoothing meeting most requirements.

This class of filing operation is for two general purposes first, to reduce by a small amount the diameter of the work, and second, to finish or prepare its surface for finish. When accurate cylindrical truth is required, it is very important that only a small amount of filing be done on the work, as it is impossible to file any considerable amount from its surface without throwing it out of round. The finishing cut in the machining should, therefore, be as smooth as possible, and very close to the exact finish diameter. The danger of filing work out of round increases as the speed of rotation decreases. That is, if the work is of small diameter and makes a number of revolutions per stroke of the file, the surface will be nearer round than when only a few turns are made per stroke. When the work diameter is large, making the rotation slow, it is practically impossible to file equal amounts from all parts of the surface, inasmuch as parts of the surface of the work are quite certain to come under the action of the file more frequently than others. It is best in filing this class of work to give the file a comparatively slow stroke, and as long a one as possible.

It must be remembered that, ordinarily, the motion of the file to the work in cross, or draw filing, is comparatively slow—say forty strokes per minute of perhaps eight inches each. As the file is cutting only about one-half of the time, the actual velocity of cut in such a case would be not far from fifty feet per minute. The intermittent motion of the cut prevents the teeth from becoming extremely hot.

In filing revolving work, the number of strokes per minute will not be so great, but the length of the stroke will be somewhat increased. This will give practically the same cutting speed, due to the motion of the file, as in cross filing. To this must be added the velocity of the work surface under the file, which will vary from fifty to 100 feet per minute. In cross filing stationary work, only short length of the file's surface is cutting throughout the stroke, which concentrates the work on relatively few teeth. In the filing of rotating work, however, nearly all of the file's length is brought into action at each stroke, which offsets largely the disastrous effect on the teeth, due to too high a cutting velocity.

The file must not be held stationary, allowing the work to revolve to it, as in that case a few teeth do all the cutting, and a grooved surface is quite certain to result. The file should be held as for cross filing, Fig. 21, and should, as it is moved forward over the surface of the work, be given a small amount of lateral motion. If a large amount of metal is to be removed the file should be pushed diagonally over the work, as shown in Fig. 24, the direction of the stroke being frequently changed, thus causing the file marks to cross each other, which, as previously explained, causes the file to cut more rapidly and produce a truer surface than when continually moved in one direction. When, however, a nice finish is required, the stroke should be at right angles to the axis of the work, as shown in Fig. 25, and should, as indicated by dotted lines, be kept parallel to this position, in its sweep from left to right.

In filing rotating work, as in the draw filing of cylindrical surfaces, the number of teeth in contact with the work surface at any instant is relatively small, consequently less pressure is required to make the file bite, other things being equal, than in the filing of plane surfaces. This feature also enables the use of files on rotating work, which, due to their concave surfaces, could not be used on plane work. This affords an excellent opportunity for using up those files, or parts of files, which, owing to their warped condition, are unfit for careful work on plane surfaces.

In filing the face of a rotating disk the same care in the selection of the file must be used as for work on a stationary plane surface, only the high spots being available for this purpose. This, unlike the work on the cylindrical surface, concentrates the work on a small portion of the file's surface, and consequently the velocity of the work should be lower. For this class of filing the file must be held firmly, to overcome its tendency to move in and out on a radial line.

In the filing of all rotating work, and especially work having projections or irregularities, care must be exercised to prevent the file from catching in the work. For this purpose a file without a handle should not be used, as in the case of its catching it is very apt to drive back, forcing the tang into the operator's hand or wrist. Frequently,

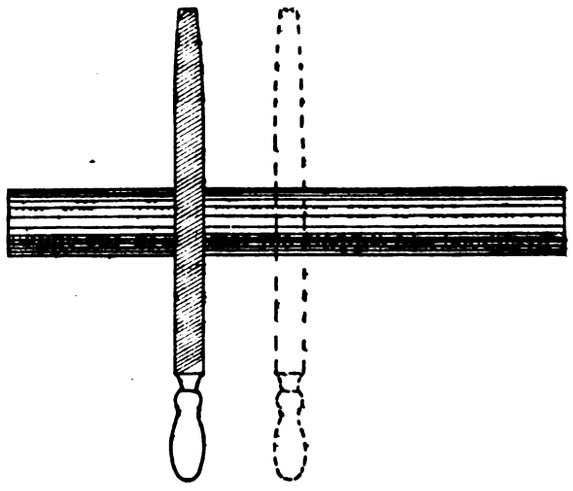

FIG. 25.

when the character of the work necessitates filing up close to the face plate, chuck, or driver, it will be found convenient to run the lathe backward, the operator standing at the back of the machine.

We print above the seventh of the series of "Practical Talks on File Work" which will be mailed free to any file user or dealer as soon as the series is complete, on application to the Arcade File Works, No. 97 Chambers Street, New York. Is your name on the list?

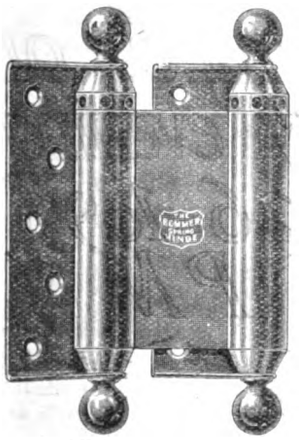
The Season for Shad.

Many and varied, indeed, are the excuses which the shrewd manufacturer furnishes, in explanation of that delayed shipment—some of them good, some a little weak, and most of them time-worn and eaten by the moths of the ages. Few makers of excuses, however, have the happiness to fall upon one so entirely unique and original, as that given below, which deserves mention all by itself.



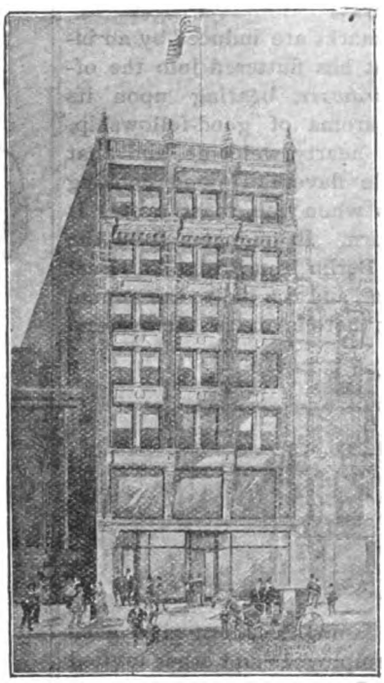
It comes, of course, from New England, that home of prolific ideas and ingenious contrivances. "We send you a few goods to-day," says this enterprising manufacturer, "and would send you more had it been possible, but we are having considerable trouble just now in getting help, and we are delayed all around. *As it is now the shad fishing season*, our men leave us for easier work, and as a result we are put to great delay in getting out our goods, while our ex-employees enjoy themselves fishing!"

Happy fishermen! Unfortunate manufacturer! Impatient merchant, waiting for his goods!

Down on the rippling waters, with the May sunshine over them, and the breezes from the Atlantic playing about them with welcome coolness; with the shining shad coming over the side of the boat in scriptural fullness; with the shop forgotten, and the hum of machinery only an echo in the memory; near to Nature and far from man—who would not be an *ex*-employee—a fisher of shad, a son of Nature, near to Nature's heart?

Often Unconsidered, But Important.

Space in factories is valuable. The time of employes is likewise valuable, and if a moment can be saved on things which are frequently done in the course of a day, the net result during a year amounts to quite a number of



hours. For example, if there are a number of doors which swing only one way, time is wasted in stopping to pull the door open, leaving only one hand free for carrying anything; whereas, if double acting "Bommer" spring hinges were used, a mere push with the foot would suffice to open the door when coming or going in either direction, leaving both hands free for carrying, thus saving time of employes who have occasion to pass from one room to another.

"Bommer" hinges are made of steel, either japanned or plated; they are extremely durable, and reasonable in price. They avoid danger in case of panics, as the doors will open whichever way the crowd pushes against them. The World's Fair award of 1893 says they are "practically unbreakable," and these hinges received the Gold Medal Award at the Omaha Exposition in 1898. They can be obtained from all Hardware dealers, or from Bommer Bros., manufacturers, Nos. 257 to 271 Classon Avenue, Brooklyn, N. Y.

A waitress may not know how to deal a pack of cards, but she always raises the deuce when she drops a tray.—*Exchange.*

An Old Firm in New Headquarters.

The accompanying illustration shows the new office building, Nos. 240–242 West Twenty-third Street, New York, just completed by Cushman & Denison, the manufacturers of the "Perfect" Pocket Oiler and the "Gem" Paper Clip. With a growing business came increased demands for a more central location, larger space for storage, increased office facilities, etc., all of which can be fully met in the above building. Cushman & Denison are one of the oldest firms in the bicycle trade, having been estab-

lished in 1883. They have since then made a specialty of oil cans, with which they supply a large portion of the trade. This involves quite a line of oilers at different prices to meet the different grades of wheels, but even the lowest price oiler made bears the firm name and is of the very best material and workmanship. Cushman & Denison will not occupy the store and first floor of the building, as this portion of it has been arranged with a special view to exhibiting automobiles, motor carriages, etc., and for which negotiations are now in progress.

Southern Indiana Hardware Dealers.

A new organization, to be known as the Southern Indiana Hardware Dealers' Association, was organized in Princeton, Ind., on April 18th. W. H. Weed, of Vincennes, was chosen president, and W. W. Robb, of New Harmony, secretary and treasurer. Thirty-five retail dealers, representing the largest Hardware houses in Southern Indiana, were present. The association will meet semi-annually, and the next meeting will be held at Washington. A resolution was passed that the wholesale houses and jobbers be notified by the secretary that the members of the association will ignore them if they sell to junk shops.

The "Franklin-Adams" Co.

The Franklin-Adams Co., Cleveland, Ohio, whose letterhead announces them as jobbers and brokers of Hardware, is a new concern, the owners of which are said to be Louis Rosenzwig and his father, Isaac Rosenzwig. The selection of the name "Franklin-Adams" seems to be a compliment to a couple of the oldest and best known families of the United States, and appears patriotic in its intent, although possibly the least bit misleading, as to the owners and managers of the concern.

It is not our failures that ruin us, but our fear and tardiness in making new beginnings after failure.—*Exchange.*

A Model Invitation.

An invitation to a festal occasion can carry a charm of its own, irrespective of the event itself, and subtly suggest hospitality, good feeding and a time of exceeding great joy. It can, on the other hand, suggest a *frappe* reception, and by its rigid frigidity, chill the marrow in the bones of the unfortunate upon whom it is dropped. Thus, when Smith said to Brown, "I suppose there is no use of asking you to stay to dinner?" Brown, of course, responded, "No, not in that way."

These remarks are induced by an invitation that has fluttered into the office of *Hardware*, bearing upon its wings the aroma of good-fellowship, hospitality, hearty welcome and that indescribable flavor of good cooking that comes when the roast oyster is done to a turn. It emanates from the office of the Berlin Iron Bridge Co., East Berlin, Conn., and is a bid to the annual oyster roast (here is one of the oysters)

which that famous concern gives each year to its employees and other invited guests. The invitation is so attractive and unique in its way, and suggests so much that is not expressed in words, that we have reproduced it here in fac simile, as a suggestion that even upon festive occasions, there is but one way to do a thing, and that is the right way. We regard the card as a model in its way, and as possessing a charm that is altogether its own.

A Book on Business Methods.

We have received from the David Williams Co., No. 232 William Street, New York, a new work, entitled "Hardware Store Business Methods," compiled and edited by R. R. Williams, Hardware editor of the *Iron Age*. It is a very compact and handy book of 200 pages, arranged with skill, and devoted to various topics which are certainly of interest to those who are desirous of conducting their Hardware stores in accordance with the requirements of modern methods. The book consists of a series of articles which have appeared from time to time in the *Iron Age*, prepared by practical and progressive Hardware merchants, whose contributions deserve to be thus preserved in convenient and permanent form. The editor says in a note of preface: "The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the Hardware trade." The price of this book is $1.

A short horse occasionally wins in the long run.—*Ex.*

The Southern Hardware Jobbers' Association.

The annual convention of the Southern Hardware Jobbers' Association will be held, as heretofore announced, at Atlantic City, N. J., on June 14th, 15th and 16th. The Association certainly have shown their desire to meet their friends of the North more than half way, as the selection of Old Point Comfort for the scene of last year's operations, and a point farther north for those of the year 1899, clearly indicates. The meeting on this occasion promises to be one of great use and of pleasure to the many guests who will be present, in addition to a large number of the members. The jobbers from all over the country, the manufacturers and their representatives, the editors of the trade journals, and all the ladies, especially, are invited to be present on this occasion. The forenoon session of the 16th will be an open meeting to which all are invited, and one of the features will be the presentation of several papers by the editors of the trade journals present. The headquarters of the Association will be in the Islesworth Hotel.

HARDWARE TOPICS BY THE WAY.

"This will be the summer of your content if you use a perfect lawn mower and sprinkler," says a Detroit merchant in his ad.

There is relief in the tin plate market. The canning factories were greatly inconvenienced by the famine. Some dealers kept records of the prices obtained in March, for the wonderment of their successors. In some cases, $10 per box was refused.

The Far Western trade is impatient over the delay in shipments of seasonable wire goods, and wild and wooly comments are no exception in the correspondence examined. Be quiet, gentlemen. Some of your patrons may have to continue antiquated and hard-times methods of fly-protection, fencing and poultry husbandry for a time. The goods will arrive later. Western dealers will meanwhile see the unwisdom of buying from hand to mouth, and doubting McKinley's promise of better times.

Wanted—An aeronaut to deliver heavy Hardware at Scio, Ohio. The streets of the town are liquid mud with Black Sea depths. Address the oil boom committee.

The Hardware dealers of an Oklahoma district had a banquet. The cosmopolitan feature was a nail swallowing contest. It is not known whether it was the variety the Texan calls "coffin nails," but law imposes no restriction upon the elasticity of your imagination.

The spring of 1899 has produced the greatest bicycle weather within cycle history. I mention this because weather is a known quantity in cycle trading. Prices? Well, some pay $75; more, $50; but the majority, less. Come with the cash, and they'll show you a sliding scale that would astonish a professional bargain scenter.

A Western wholesaler has added what he terms a bicycle exchange to his business. Here you may find wheels of all makes and vintages, in and out of repair. Take your choice, make a swap, pay the bonus, and the repairman-while you-wait will fix you up according to agreement. The dealer says it's a very complex business, one that requires the patience of Job and a subtle, guile-proof mind, and lightning mechanical genius, and several other qualities generally accredited to the Yankee race, but there's money in it—and that's what all our "new business" specialists are after.

Wire goods, in conformity with fire underwriters' regulations, is a new one. Great and crafty is the inexhaustible mercantile genius of the present generation!

Gradual is the advance, rapid the decline. If our merchants would only stick to this screed, kicking would be out of order. A demoralizing influence of five years' duration can not be regenerated by a revitalized trade energy yet in its inception. First land with both feet, then follow the direction of the leaders—for most of us are still followers—and you'll eventually share in the full scope of the advance of price, profit and trade. Good things are done up in small bundles. So is prosperity.

When the citizen is prosperous, he builds—may not be Marktwainish, but it's so. Much of the surplus activity now confronting the trade is due to builders. Everybody wants and demands modernization. Country towns are cityfying and cities are metropolitanizing. It's a poor American nowadays who does not crave for at least the common comforts of modern life.

Practical patent specialties do not beg for agencies these days. When the Hardwareman buys new things without requiring lists of attests, time to think it over, or optical proofs, he's on the road to recovery from his pessimistic lethargy. Sell him all you can, and humor him to buy more. When the merchant buys big, he generally pushes sales, for they all dread overcrowding and overstocks.

"The busy merchant has no time to borrow trouble and anticipate strange, occult things. The best way to get along with the trusts is to mind your own business. Trusts are the legitimate product of modern conditions. They will exist until they fall of their own nonentity, topheaviness or spoilation, or economical climaxes demand a change. Trust minds have other things to do than 'mixing up trouble' for the distributors of their product. You may be morally opposed to monopolies, but you cannot shape your own policy as long as you are commercially or financially vulnerable. It's better to fraternize with your oppressor than flee at his approach." This is the substance of an address made by the chairman of a Western Hardware club.

"New collections good; old ones as usual"; finished up the report of a salesman to his house. Did he speak a great ironical truth?

"Wanted—A compiler of a complex trade nomenclature. Only those conversant with Hardware cataloguing need apply." Well, some erudite catalogue man of a wholesale Hardware house may yet become a Daniel Webster.

The '99 *edition de luxe* of *Hardware* has created the usual furore. Now that its contents have been digested by thousands of readers, it occupies the place of handy reference book in many a desk, Even the typewriter girls enjoyed this holiday Hardware literature. This is merely a supposition. Maybe the portraital beauties of *Hardware's* staff and other Hardware personages engendered the feminine interest.

"It's always best under the old roof, but not when it leaks," is how a man out here solicits terne trade.

From a Kansas City ad.: "We have use for several Santiago sharpshooters who can discover the nigger in the woodpile who ordered a bill of goods of us, paid for it with a mystic U. S. voucher and had the goods delivered o. b. a mystic transport. We shall defray coroner's and undertaker's expenses, keep you in whiskey and tobacco for a week, and in ammunition for a year. The sheriff is bribed not to interfere."

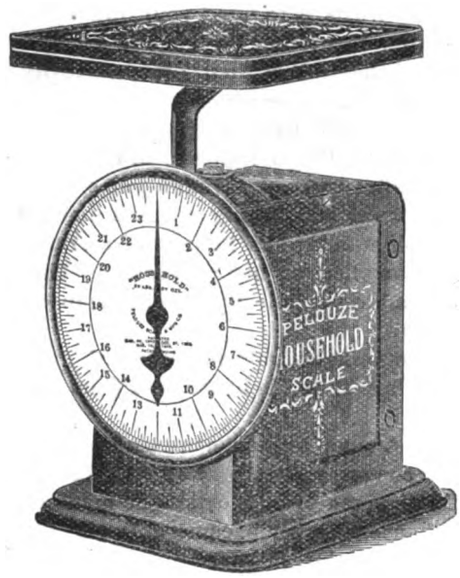
A Chicago manufacturing agent—they are thick as flies there—advertised for hustlers who could place $500 worth of cutlery the first day. The buyer was to receive as a bonus a quit-claim deed to a city building lot. The hustlers did a land office business. Upon examining their deeds, however, the dupes found that the measurement was denoted by inches instead of feet. Imagine the tableau.

J. B. RINDFLEISCH.

Cleveland, Ohio, May, 1899.

Alder & Boyd, manufacturers' representatives, No. 37 Warren Street, New York, have been appointed exclusive sales representatives of the Knapp & Cowles Mfg. Co., Bridgeport, Conn., to the domestic and export trade. This company is a large manufacturer of screwdrivers, garden tools, mincing knives and other household articles.

The Millers Falls Co. have removed from No. 93 Reade Street, New York, where they have been located for so many years, to No. 28 Warren Street, where they will be found "at home" to their friends as heretofore.



A kettle sings before it boils, and a boil sings before breaks.—*Exchange.*

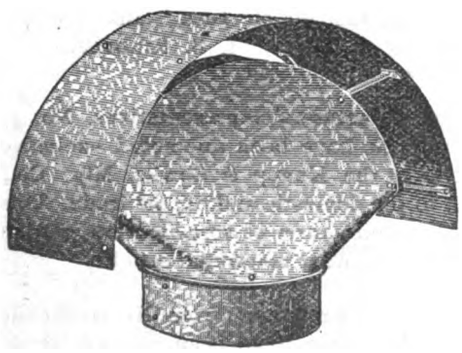
NEW GOODS AND SPECIALTIES.

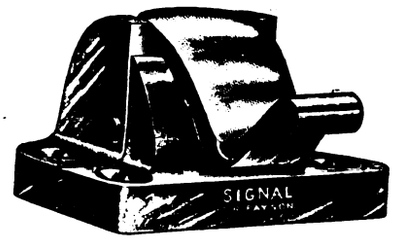
Pelouze "Household" Scale.



The "Household" Scale shown herewith is being manufactured and successfully placed upon the market by the Pelouze Scale & Mfg. Co., Chicago, Ill. Its capacity is

24 pounds; is beautifully made of cold rolled steel; handsomely japanned and striped with aluminum; has a large white enameled dial, which is very serviceable and distinct; the top plate is made of steel, beautifully enameled; is unbreakable, and can be instantly adjusted for pan or scoop. It is described further by the makers as occupying very little shelf room, light for shipping, and each scale is boxed separately and guaranteed. The dimensions are as follows: Extreme height, 9 inches; width, 5½ inches, depth, 6½ inches. Weight, boxed, only 4½ pounds. For further particulars address the Pelouze Scale & Mfg. Co., Chicago, Ill., who manufacture a complete line of counter, confectionery, postal, market, hanging and sporting scales, spring balances, ice scales, etc.

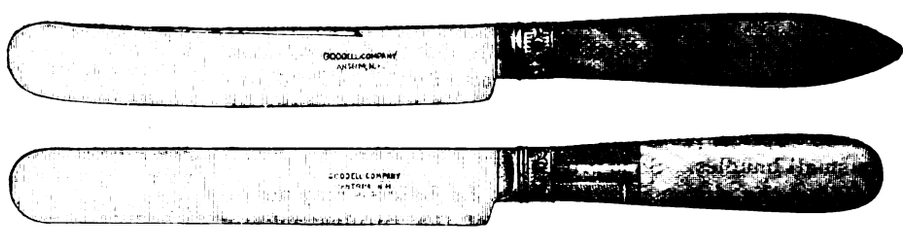
The "Perfection" Ventilator.



The "Perfection" Ventilator here shown is manufactured by Berger Bros. Co., Nos. 231-237 Arch Street, Philadelphia. It is described as radically different in construction from other ventilators, and attention is especially called by the manufacturers to the points that it combines simplicity with an ornamental appearance; is so constructed as not to be injured by the heat; will exhaust a very

large amount of air; is of special service as a car or ship ventilator; works equally well in a vertical or horizontal position; combines efficiency, strength and durability; has no place either inside or outside for soot or dirt to collect. The body is made of sheet iron, formed in such a way as to secure an inward and outward flare; the cap is fastened to the body with malleable iron stays, and the galvanizing is done after the ventilator is made excepting in the larger sizes, the parts for which are galvanized beforehand. No solder is used in the construction, therefore there is no danger of its collapsing under heat. The makers will be pleased to furnish other information on application.

Payson's "Signal" Sash Lock.



The Payson Mfg. Co., Chicago, Ill., and No. 88 Chambers S treet, New York, are introducing successfully through

out the trade their latest improved device in the line of sash locks. It is called the "Signal" Sash Lock, and possesses a number of qualifications which are justified by the original features of its construction. We present herewith an illustration, showing its unique appearance when adjusted to the sash. By its peculiar mechanism it draws both sash tightly together in a very simple manner, securely lifting the upper sash to its proper place. It has a wide front plate over which the locking arm is moved readily, and locked with certainty. The "Signal" device by which it obtains its name, is shown by the signal arm being uplifted and in plain sight when sash is unlocked. This arm cannot be pulled down and adjusted to place, without locking the sash in a manner which makes it perfectly burglar proof.

Goodell's "Four Hundred" Line.

The Goodell Co., Antrim, N. H., who are always figuring upon something for the bettering of their line of goods, have begun in their "Four Hundred" line a radical departure from anything offered in knives and forks. The illustrations which accompany this, show the completed article, and also how the blade is fastened into the handle with metal. They call attention to the fact that these handles are warranted not to crack or come loose, that the ferrule and bolster is one piece, nickel-plated; blade is fastened into the handle with metal, which completely fills the cavity, attaches itself to the tang of the knife, the in-

side of the bolster, and makes the blade, handle and bolster one solid piece, impervious to hot water, heat or cold. The forks are of the latest design, four-tined. They are first tinned, and then nickel-plated, guaranteeing, as they state, "almost everlasting wear, while in strength, durability and elegance they are suitable companions for the knives." They furnish this line in cocobolo and ebony handles, of a variety of shapes, with straight or cimeter blades. These goods are covered by patents. Further

Digitized by Google

particulars may be learned from an examination of their advertisement on page 38 of this issue, and all inquiries directed to the home office, or their New York office, No. 10 Warren Street, will receive immediate attention.

The Brainerd, Tanner Co.'s Specialties.

The Brainerd, Tanner Co., with New York offices and salesrooms at No. 90 Chambers Street, and factory at Nos.

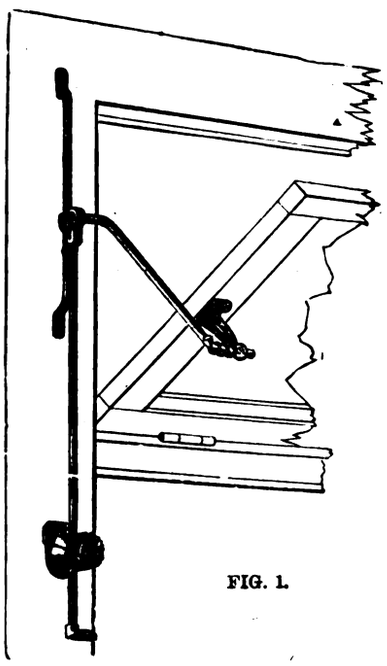


FIG. 1.

72 and 74 Church Street, Albany, N. Y., are successfully manufacturing, among their several specialties, the Dickson Transom Lifters and Openers, an illustration of which is presented herewith. The Dickson Transom Lifter is universal in its adaptability to meet all requirements, as in its form it swings out in sashes centrally pivoted, or hinged

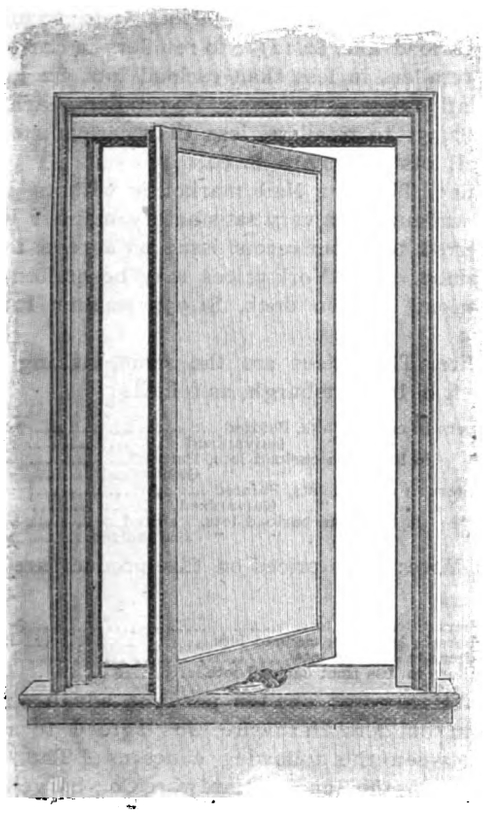

FIG. 2.

at either top or bottom, and in every case for right or left hand; see Fig. 1. No special bracket is ever needed, as this lifter operates transoms deep-recessed as well as if they were flush. It makes safe and easy the hanging of transoms for the best manner of ventilating, namely, hinged at top swinging out, or at bottom swinging in. For transoms hinged at bottom, torsion springs are provided applicable to all these lifters and of varied strength to suit weight of transoms. These springs act not simply as cushions to keep the glass from breaking, in case the sash accidentally falls, but as balances to prevent the sash from falling at all. The resistance becomes greater as the weight of the opening sash increases, so that a transom hinged at bottom is as safely operated as one hinged at top, and much more easily. In Fig. 2 is shown the B. T. G. Locking Pivot, a device which is meeting the approval of many architects and builders to whom it has been a solution of the problem what to do with a sash too heavy to be hung with weights. Heretofore when a sash was pivoted at top and

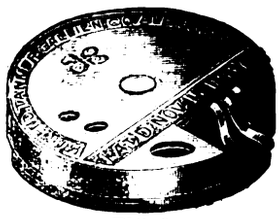

FIG. 3.

bottom, it was necessary to fasten a casement adjuster to the sill to hold the sash open or shut. The B.T.G. Locking Pivot dispenses with the adjuster, and while acting as a centre to carry the sash, also locks it securely in any position; see Fig. 3. Pivoted sash are most desirable where at times the greatest amount of ventilation is needed, since by swinging the sash around half way the entire space is left open, while in an ordinary window hung with cords and weights, not more than half the opening is ever available. Information regarding their full line of specialties will be furnished upon application to New York office.

Texas Hardware Jobbers.

A meeting of the Texas Hardware Jobbers' Association was held in Sherman, Texas, on April 25th and 26th. The following officers were elected for the coming year:

F. A. Heitmann, Houston, president.
J. C. Bering, Houston, first vice president.
Walter Tips, Austin, second vice president.
Robert Eikel, Waco, secretary-treasurer.

Executive committee; James Moroney, Dallas; R. E. Bell, Weatherford; A. P. Duncan, Waco; W. L. Sanford, Sherman.

An ad. in a trade journal, says the *Shoe Trade Journal*, will do what traveling men as a rule do not do. It will go to towns off from the railroad, where there are no hotels. It will work nights, Sundays and holidays, in wet weather or dry, hot weather or cool. It will talk to a merchant before some of the boys are out of bed in the morning and after they have gone to bed at night. It's one of the few things that has not as yet struck for eight hours.

V. P. Humason, No. 80 Chambers Street, New York, has been appointed an agent for the International Silver Co. He will handle principally the Wm. Rogers Mfg. Co.'s line as heretofore, but is in a position to fill orders for the other brands as well, at the lowest factory prices.

It is reported from St. Paul that the Hardwaremen of Minnesota are about to form a new mutual insurance company, under a law recently passed. There are 400 retailers in the State, and from these the necessary 200 will be easily secured.

About thirteen years ago the first tank steamer was built, and there are now one hundred and eighty tank vessels in existence, nearly all of them being steamers. Their tonnage is 401,024.—*Scientific American.*

Hardware Association of the City of New York.

There has been talk for some time among the jobbers of New York city, in regard to the formation of an association for mutual benefit and better personal acquaintance, and the same has now eventuated in the formation of the Hardware Association of the City of New York, which came into being at a meeting held in the rooms of the Hardware Club on the evening of Wednesday, May 3rd, with Alfred D. Clinch in the chair.

The jobbers of the city who were present, were unanimous in the decision to form an association similar to those that have done so much good work in other cities, and the matter was so far advanced that officers were elected, and a constitution adopted at this gathering.

The houses that were represented at this meeting were the Russell & Erwin Mfg. Co., Sargent & Co., the Sickels & Nutting Co., Underhill, Clinch & Co., White, Van Glahn & Co., Smith, Lyon & Field, the C. A. Baynon Co. and Robert J. Masbach. These concerns may be regarded as forming the constituent membership list.

The following officers were elected for the coming year:

President, A. D. Clinch, Underhill, Clinch & Co.

Treasurer, E. C. Van Glahn, White, Van Glahn & Co.

Secretary, B. A. Hawley, Russell & Erwin Mfg. Co.

The executive committee consists of the above officers, with the addition of Robert Sickels, of the Sickels & Nutting Co., and Thomas J. Atkins, of Sargent & Co.

The constitution provides that the affairs of the association shall be managed by a president, treasurer, and secretary, and an executive committee of five members, which shall include these officers. The annual meeting shall be held on the second Tuesday of May, at which the executive committee for the ensuing year shall be elected by ballot.

It is further provided that wholesale Hardware jobbing firms or corporations having an office in the city of New York, may be elected to Active Membership, and it is further provided that other classes of membership shall be admitted, as follows:

Hardware manufacturing firms or corporations having an office in the city of New York may be elected Associate Members.

Hardware commission firms or corporations having an office in the city of New York may be elected Auxiliary Members.

Wholesale firms or corporations, dealers in allied goods, having an office in the city of New York may be elected Allied Members.

Only active members shall be entitled to vote at meetings of the association, or to hold office.

It is further provided that standing committees shall be appointed, composed of three members each, and each one of which shall be devoted to looking after the interests of certain lines of goods. Thus, there will be a committee on shovels, one on agricultural tools, etc., etc.

This new association commences under the most favorable auspices, and the character of the gentlemen having it in charge officially, and of the houses which have become members thereof, is an absolute guarantee that its affairs will be conducted upon a high basis, and that the good of the trade in general will be looked after, rather than the personal interests of the individual members. The provision in regard to the admission of concerns in the various grades of membership seems to be one of wisdom, as the association will thus be able to compass the chief object had in view, which is the bringing of the members of the trade into closer personal and business relations, the removal of causes for friction, better acquaintance among the firms and men whose interests might at a glance seem to be diverse, but are really identical, and the uplifting in a general way of the tone of the Hardware trade.

HARDWARE costs only One Dollar a year.

Review of the Markets.

The market has steadied down somewhat during the past ten days, and the chief occupation of the manufacturer and jobber relates rather to the marketing of goods than to the marking up of prices. The most notable change is that made by the leading manufacturers of builders' Hardware, who have made an advance of ten per cent., as related in full on page 21 of this issue. The reasons for this advance seem good, and it has been practically endorsed by the other manufacturers in these lines, who find that the cost of material has so advanced, as to render this step necessary.

An important feature of the market is that uncertainty caused by the immense combinations in manufacturing interests, going on in all directions. This is, in fact, a revolution in methods, and the results are problematic and uncertain. There are many who view this wild rush with unmixed alarm, and dread the evils that will follow the reaction. It is a very grave question whether the riches that have come in years past from a great combination in the oil business, can be made certain in a thousand lines that run from yeast cakes to trip hammers. The craze, if such it be, must run its course. A few will probably reach great riches, but how about the thousands who are risking all that they have in this world, upon this venture?

The business of the country in Hardware lines seems to be good. The retailers are well stocked, ready for a rush of customers; the jobbers find trouble at times and places in getting their orders filled; the manufacturers have all they can attend to. Cautious buyers, however, are not loading up beyond their needs, preferring to wait until present stocks are a little lower in their lofts, before taking on more at present prices.

Things are, on the whole, in fair shape, and all the indications point to a good season of business in all directions.

Wire Nails: No change in these goods has been made since our last report, so that present quotations are as follows: f. o. b., Pittsburgh; to jobbers in carload lots, $2.10; to jobbers in less than carload lots, $2.12½; to retailers in carload lots, $2.20; to retailers in less than carload lots, $2.30. New York quotations are as follows: To retailers, carload lots on dock, $2.35; to retailers, less than carloads on dock, $2 50; small lots from store, $2.60.

Cut Nails: The Cut Nail market is without change; business continues in a very satisfactory manner and the prices referred to in our recent issue as agreed upon are fully sustained. New York prices may be quoted as follows: Carload lots on dock, $1.95; smaller lots from store, $2.10

Barb Wire: The prices are the same, making current quotations f. o. b., Pittsburgh, as follows:

To jobbers in carload lots, Painted	$2.20
" " Galvanized	2.70
" in less than carload lots, Painted	2.22½
" " " " Galvanized	2.72½
To retailers in carload lots, Painted	2 30
" " " Galvanized	2.80
" in less than carload lots, Painted	2 40
" " " " " Galvanized	2.90

Smooth Wire: The prices on this product are as follows:

To jobbers in carload lots	$1 95
To jobbers in less than carload lots	1.97½
To retailers in carload lots	2 05
To retailers in less than carload lots	2.15

Builders' Hardware: The ten per cent. advance referred to above in builders' Hardware, was agreed to at a conference between the following concerns: The Yale & Towne Mfg. Co., the Reading Hardware Co., Sargent & Co., the Russell & Erwin Mfg. Co. and P. & F. Corbin. The other manufacturers in these lines have almost without exception adopted this advance. In the advance on this line, Sargent & Co. make exception to the following articles: wire goods, wrought goods, Eclipse door springs and checks, squares and spring balances, and cow bells. The Yale & Towne Mfg. Co. make exception on door checks, cabinet

Digitized by Google

and trunk locks, "Yale" night latches and padlocks. The Russell & Erwin Mfg. Co. state that their advance covers their lines with the exception of door checks, steel squares, padlocks, car trimmings, meat cutters, steel shelf brackets, stove and tire bolts and nuts, and wood machine screws. P. & F. Corbin except door checks and wood and machine screws.

Wire Cloth: The following announcement comes from an authoritative source in New England, under date of April 27th: "The manufacturers of poultry netting, having made a sharp advance in price, the New England jobbers have adopted a discount of 80&10% for factory shipments. Price of wire cloth has also advanced to $1.50 per hundred square feet."

Leather Belting: The Leather Belting Mfrs.' Association held a special meeting some days since at the Astor House, New York, to consider a proposed raise in the price of their product. Thirty-four firms were represented. It was decided, in view of the high prices for hides and leather and the general advance in the cost of all materials entering into the manufacture of leather belting, that prices be raised by lowering discounts from the association list, and that such advances be not less than 15 per cent. over prices ruling on March 1, 1899.

Binder Twine: The market for binder twine remains substantially the same as last reported, and we quote as representing current quotations the following:

White Sisal, 500 feet to pound	9½ cents
Standard, 500 feet to pound	9½ "
Manila, 600 feet to pound	10¼ "
Pure Manila, 650 feet to pound	11 "

Prices are for carload lots, f. o. b. Eastern factories. An advance of ¼ cent per pound is charged in less than carload lots.

Cordage: The market on Manilla and Sisal Rope is without active interest, the business being nominal and prices the same as previously given. We quote as follows:

Manila, 7-16 inch and larger	per pound,	9¼ cents
" ⅜ inch.	"	10¼ "
" ¼ and 5-16 inch	"	10¼ "
Sisal, 7-16 inch and larger	"	8¼ "
" ⅜ inch	"	9¼ "
" ¼ and 5-16 inch	"	9¼ "
" Lath Yarn	"	8¼ "

Prices are for carload lots, f. o. b. Eastern factories. For less than carload lots the customary advance of ¼ cent is charged.

Common Carriage Bolts: The prices on carriage bolts, bolt ends, machine bolts, etc., are firm, and the manufacturers are kept busy. Some disturbance in the market is caused by the fact that dealers who had purchased largely at lower prices are clearing out their stocks, at prices sometimes below those offered by the manufacturers.

Blacksmiths' Vises: The advance on these goods, which occurred a couple weeks ago, is being maintained by the manufacturers, although prices of a lower character are sometimes quoted by the jobbers who have large stocks on hand.

Sheet Copper: At a meeting of the manufacturers, held some days since, the price of sheet copper was advanced to 22½ cents base, instead of 21½ cents which prevailed heretofore.

Cattle Leaders, etc.: Somewhat higher prices are announced on these goods, that on copper bull rings being especially marked.

Wrought Brass Butts: Manufacturers of these goods have made an advance of about ten per cent. since our last quotation.

Door hangers and track: Under date of April 20th, the Chisholm & Moore Mfg. Co., Cleveland, Ohio, make the following announcement: "Owing to the constantly increasing cost of material we are obliged to withdraw all quotations on door hangers and track."

Sash Locks: The following revised prices for Payson's Signal sash locks noted elsewhere in this issue, went into effect April 10th. Discount, 70 per cent:

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

THE OMAHA TRADE.

A very satisfactory volume of trade has been passing through for the past week or ten days, and the last part of April was materially in advance of the first half, and May bids fair to continue the business in large volume. Some little difficulty is experienced in the matter of prompt delivery on steel goods, wire cloth, screen doors, and other season goods, but manufacturers and jobbers are doing the very best they can, and retailers appreciate the situation, and are somewhat more patient than usual over the annoying delays. Collections might be better, and we have seen them worse. Prices are well maintained, and nothing at present seems likely to interrupt an even and satisfactory flow of business. RECTOR & WILHELMY CO.

THE COLUMBUS TRADE.

Trade is still at high water mark, and jobbers are experiencing great difficulty in getting goods fast enough. In fact on several lines it is possible to get goods only by the wheel barrow load, instead of car loads. We have a vague suspicion that some manufacturers were caught napping and did not buy raw material in sufficient quantities to cover their needs, and now the price is so much higher they hope to delay filling orders long enough to have them cancelled, a thing not likely to happen when they were placed before any advance took place. We may be wrong in judging manufacturers thus, but in some instances it looks that way. We think if jobbers who are suffering for screen wire cloth, steel goods, poultry netting, etc., could have a peep at manufacturers' books they would find a great many orders filled that were received a long while after some unfilled ones, and the manufacturer is reaping the benefit of the advance and allowing jobbers who have old orders to suffer. The season is well along for several articles and we know of many jobbers who have many unfilled orders on their books yet, and their customers are making life a burden for them. We do not blame them, as they gave orders with the expectation of getting the goods in time for their needs. Lawn mowers and screen doors are not used in Ohio in December and

Digitized by Google

January. There is no indication of any weakening in prices, but a number of articles have advanced during the past two weeks. When a manufacturer advances everything in their catalogue 10 per cent. from page 1 to 817, and there are only 1089 pages in the catalogue, it is a pretty clean sweep, and this is the second time they have done it. Some goods seem very high at present, but if any one will take the trouble to go back to '95 and '96 they will find that most goods are still considerably lower than then.

SMITH BROS. HARDWARE CO.

THE CLEVELAND TRADE.

Criticism may be a benefit, but namby-pamby fool reformers in times of war should be quarantined against.

Of all the critics of the administration, not one prominent man has dared to risk his reputation by suggesting what should be done; neither politicians who are searching for a policy, nor college professors have proposed a different policy while denouncing the President and the army.

International obligations leave no option with the executive, but to attempt to restore order in newly acquired territories to save us from both dishonor and disgrace, and from being the laughing stock of the world. What do the critics want? Let them tell, and give the people a chance to decide. The place in history is safe for both the President and the army officers who have aided in securing new territory, while those who are trying to prevent the country from doing its duty, will be classed as enemies of the republic. England's policy in India was severely criticised, but its results were among the greatest achievements of the world's history. It is safe to rely upon the patriotism and common sense of our people, and they are sure to make short and sharp disposition of those who have no mission but to find fault.

The administration will welcome suggestions, but will not be dismayed by denunciation.

Trade in all lines is good. Many goods are being sold for less than the cost of manufacturing will be when new material must be used. Many of the manufacturers have hesitated about making advances as long as they were using low-priced material, but they will be compelled to do so before the first half of the year closes. Prophecies of a decline are less frequent, and a feeling that an era of high prices has come to stay is common. The consuming capacity of this country is enormous, now that the people have money to purchase with.

The influence of high or low wages on the condition of business is an important economic question, which is worthy of careful consideration.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE KANSAS CITY TRADE.

Writing under pressure, at a cannon ball speed, we will heartily and sincerely at this late date, congratulate you upon the annual.

Perhaps the writer is the only man who will say that he read it entirely through, but he did. In press work, composition, arrangement, completeness, value, it is a thing of beauty, and will not be excelled by any or all of your more or less esteemed competitors.

Shake!

Now to business. Good weather, good business, good prices, good luck—four necessaries to success. We are just in receipt of one carload of wire cloth, one carload of screen doors. We mention this particularly so that some of our friends up the river or elsewhere may take courage and hope to get one car of each, like we did, where we have about ten due us.

That is where our "good luck" comes in. Nothing like it. Our postage bill is enormous, and our stenographic department is demoralized, but now we are hopeful that the country customer will let up for three weeks anyway.

Prices remain steady, and April was a distinctly good month and in excess of last year in volume of orders, and of course profits. More good luck. Our business is growing. The cashier reports "collections only tolerable."

We have no failures, scarcely, out West any more.

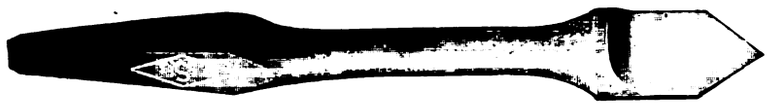
Assuring you that we are too busy just now to say more, we will say less than we usually do.

Possibly we say too much sometimes.

GILLE HARDWARE & IRON CO.

THE INDIANAPOLIS TRADE.

We are very busy in our endeavor to ship all orders promptly. In seasonable goods, we are having less difficulty in filling orders than a month or more ago.



It is evident to us, and probably to other jobbers and many retailers, that some salesmen spend time trying to find out what their competitor is getting for certain goods, which could be better used in keeping posted as to what the goods are actually worth at present, and what they will sell for. Many buyers, and probably the majority of them, take pleasure in criticising the jobber's salesman when his price is five or ten cents a dozen more than that of his competitor, but say nothing complimentary to him when the comparison is this amount in his favor. They always reserve their remarks upon these items for the other salesman when he comes around. The average buyer appreciates the "snap" when he can catch a salesman napping, and is able to purchase at old prices any commodity upon which there has been a sharp advance. The oftener the buyer is able to secure these great bargains, the greater he is impressed with the fact, and when buying goods of the same salesman on a declining market, he is very careful to be fully posted as to the market price. If a salesman is slow in advancing his price, it is almost certain that he will not be likely to give his customers the

benefit of the decline, as promptly as the salesman who advances with the market, and endeavors at all times to sell his whole line at a reasonable margin.

VAN CAMP HARDWARE & IRON CO.

THE DAVENPORT TRADE.

With every fruit tree and flowering shrub a fragrant bouquet; every shade and forest tree arrayed in new and most delicately tinted foliage; every meadow, lawn and pasture freshly carpeted with soft green velvet and ornamented with exquisite flowers of every hue, exhaling fragrance with each warm and gentle zephyr; with birds filling the air with melodious notes of joyous music; all nature resplendent in new and gorgeous coverings; balmy and health giving air, the country almost within sight, inviting and alluring one away to its enchanting scenes and quiet rest, it requires effort and much personal sacrifice to remain in the murky atmosphere of a busy office to report the conditions of trade and the prospects of money getting.

But we must have barb wire to protect the growing crops, hoes to tickle the soil, that it may laugh with bountiful harvest, lawn mowers, rakes, garden hose and sprinklers to preserve the beauty of our lawns; forks for handling fertilizing dressings; poultry netting for separating different families of fowls during the breeding season, protect them from intrusion of natural enemies, and to remove temptation to do mischief on their part; window screens, as a reminder to the festive fly and musical mosquito that their company is not desired within; nails, to rebuild new and repair old; sheep shears, to remove the white fleecy winter overcoats of the sheep, and fishing tackle to amuse the finny tribe during the approaching vacation season. Hence Hardware stores must be kept in operation, and to do this intelligently and successfully we must learn from those engaged in this line how to improve our own methods, and they in turn have a right to know something of our experiences. It is true

"That some act upon this prudent plan;
Say little, but hear all they can;
Safe policy—but hateful.
So barren lands receive the shower,
But render neither fruit nor flower;
Unpleasant and ungrateful."

So we report the condition of trade here, without any exciting element. The aggregate amount of sales for April, about the same as last year. People are becoming accustomed to the new and higher prices. We miss the visits of many traveling salesmen, who have for many years called on us in the interest of manufacturers who have pooled their earnings and consolidated their plants, enabling them to dispense with the services of these men, whose presence so often delighted us.

The congestion of the market is practically relieved, and there is little difficulty experienced in getting goods rapidly enough to supply the wants of the trade. Some extensions of time for payments are being asked, for the reason of overbuying during the rapidly advancing markets, but on the whole collections are satisfactory.

SICKELS, PRESTON & NUTTING CO.

THE BALTIMORE TRADE.

Trade has moderated to an easy flow which at this season runs smoothly with large orders conspicuously absent; light summer goods, building Hardware and poultry netting being principally in demand.

The retailers are well stocked, and another rush is not anticipated earlier than August.

Collections in many sections are slow.

We are pleased with the volume of business dispatched in the past four months, and believe the gross profits have aggregated more than has been our good fortune to make in the same month for many years past. If advances continue throughout the year as they have started, demand will lessen to absolute necessities and goods will be mainly purchased to fill orders in hand, and but few bought for anticipated sales. The stability of the market is questionable, and in a country so prolific in resources exorbitant prices can not be maintained for any great length of time. Capital of large and almost unlimited proportions attempting to control an industry will perhaps at first meet with feeble resistance but were greed is pronounced in its operations, the rights of the laboring class in jeopardy and many manufacturers and the jobbing trade in general dependent either directly or indirectly upon the one source of supply, something of an unexpected nature will happen.

The American Axe & Tool Co. advise us they can not promise deliveries before October, poultry netting orders placed six weeks since have not been filled and other items can be mentioned that are receiving similar attention.

Such conditions are anything but gratifying to the jobber who whilst inhaling the sweet perfume of the summer rose can but feel that he is in a hot bed of perplexities.

In attempting to solve the many problems that are daily occurring one is at his wits' end; prices quoted yesterday may not be open to-day, time of delivery at once or very limited and future dating exceedingly rare.

We note the steady upward move in values—a ten per cent., then another and so on, and if you hold off until the fifty per cent. mark is reached, and then have to purchase, you want to kick yourself for not doing so earlier. A man can be too conservative at times thereby missing opportunities to increase his wealth, but to avail yourself of every

good thing presented to you requires a surplus capital which few possess.

The future seems veiled in uncertainty respecting the prices of Hardware, all previous records of trusts and consolidations are broken and eclipsed by the giants of recent birth. H. W. Webb & Sons.

THE BIRMINGHAM TRADE.

Business continues active, each month's sales running ahead of corresponding month of last year or any previous year, and every indication points to 1899 as a record maker with which subsequent years will be compared. We notice that the end of industrial combinations has not been reached yet, and as speculation has taken a new turn, we have nothing in the past to guide us to any safe conclusions as to what the result will be, but we feel safe in saying that some revolutions will be worked. Some classes may be hurt and some may find profit. In the meantime, we will not condemn too severely, for if the change is for the better, we will expect to see it durable, but if for the worse, we will hope that it will not last long. We will strive to adapt ourselves to the new conditions.

We are glad to report that our architects are all busy which means that carpenters, brick masons, stone masons and the supply dealer are all at work and the sundry pay rolls keep money circulating and our people are contented and pleased with the situation.

Pig iron and bar iron have been advanced again and we feel that the end of advances in this line has not been reached, and the dealer is safe in keeping up stock. The wages of the miners, which are based on the price of pig iron have also been advanced again and they are now getting the highest wages they have had in a series of years.

Contrary to the doctrine of the 16 to 1 philosopher, we now have high prices of goods and high wages on the gold basis, with plenty of money and at a low rate of interest. The strong export movement of merchandise has taken the surplus out of the way and given the sellers charge of the market, and hence the prosperity. We should learn a lesson and hold on to the export trade. The high prices will revive many idle plants, and increase the products of those already active, and unless we continue to export, there will come a period when we will have more than we need, and result in lower prices and lower wages, and the consequent shutting down of the less profitable plants. May this not come too soon. We are glad to see the bank clearings show a good increase, also that the railroads are making good reports. This is an index that others are active as well. Moore & Handley Hardware Co.

Rodgers & Sons' New Premises.

Some time ago, it was stated in the *Hardwareman*, that Messrs. Joseph Rodgers & Sons, Lim., the well-known cutlery manufacturers, of Norfolk Street, Sheffield, were erecting a large and commodious block of works in River Lane, Pond Hill. It is some years since they found their extensive manufactory in Norfolk Street inadequate to accommodate their increasing business, and they erected new works on Pond Hill. There they have developed the manufacture of cutlery and electro-plate, and a few years ago they felt crowded-out even there. A spacious site was obtained close by, and there a lofty commodious factory has been completed, capable of accommodating 500 workpeople. The building is constructed upon the most modern principles as regards protection against fire, abundance of light and air; space and general sanitary arrangements are all that could be desired. The works are fitted up with the most modern machinery and appliances, with a view of producing the largest quantity of goods at the smallest cost, and in the least time. The whole of the plant is driven by electricity, there being no fewer than seven motors distributed about the shops. A good deal of the labor-saving machinery is quite new to these branches of trade, and marks another distinct advance in these industries. It is significant of the energy and enterprise of this firm, that although one of the oldest in Sheffield, it is quite abreast of, if not in advance, of the times, in the adoption of new methods and appliances.—*Hardwareman.*

D. W. Simpson, manager of the Wilcox Mfg. Co., of Aurora, Ill., sailed for Europe on the steamer *Paris* on May 10th, to visit some of the people in England, Germany, France and Scotland who have been handling Wilcox's goods. He will be abroad for three months.

The Sheffield *Telegraph*, Eng., in a long leader of pessimistic tone, says: "Nowadays America and not Germany is the *bete noir* of the home Hardware industry. An immense amount of work is being done in America that England ought to do."

The New Rubber Combination.

The combination of rubber concerns which has been so long rumored, is at last definitely announced. The name is the Rubber Goods Mfg. Co., and the officers are: Charles R. Flint, chairman of the executive committee; Charles Stewart Smith, president; Ulysses D. Eddy, vice-president; Wallace B. Flint, treasurer, and W. A. Towner, secretary and assistant treasurer. The company's authorized capital is $50,000,000, of which half is 7 per cent. cumulative preferred stock and half common stock. The company has acquired and assumed active control of the following: Ninety-one per cent. of the capital stock of the Mechanical Rubber Co., which owns the plants of the Chicago Rubber Works, the Cleveland Rubber Works, the plants of the New York Belting & Packing Co., one of which is located at Passaic, N. J., and two at Sandy Hook, Conn.; the plant of the Fabric Fire Hose Co., at Warwick, N. Y.; the plant of the Stoughton Rubber Co. at Stoughton, Mass. The company also acquire 75 per cent. of the capital stock of Morgan & Wright of Chicago; the entire capital stock of the Peerless Rubber Mfg. Co. of New York, and the entire stock of the India Rubber Co., of Akron, Ohio.

Thomas F. Keating, of the Yale & Towne Mfg. Co., and treasurer of the Hardware Club of New York, sailed, some days since, for Europe, with the intention of remaining abroad for several months. He has worked faithfully in the business harness many years, and has earned a vacation. He will, perhaps, pay some attention to business affairs, but the rumor that he has gone to examine the locks of the Suez Canal, for the purpose of ascertaining whether or not they infringe on the Yale patents, is unfounded; also that other story that he has gone to search the art galleries of the old world for gems to hang upon the walls of the Hardware Club. During Mr. Keating's absence, E. C. Van Glahn, vice-president, has been chosen treasurer *pro tem.* of the Club.

OUR FOUR HUNDRED LINE

Is a radical departure from anything heretofore offered in knives and forks, and in many respects vastly superior to any which have preceded them; consequently, not to be confounded with goods of somewhat similar appearance which have the blade fastened into the handle with cement. The handles are warranted not to crack or come loose. The ferrule and bolster is one piece, nickel plated. The blade is fastened

into the handle with metal, which completely fills the cavity, attaches itself to the tang of the knife, the inside of the bolster, and makes the blade, handle and bolster one solid piece, impervious to hot water, heat or cold; the neatest, most substantial and best method ever invented for fastening the handle and blade together.

The forks are of latest design, four tined. They are first tinned and then nickel plated, guaranteeing almost everlasting wear, while in strength, durability and elegance they are suitable companions for the knives.

We furnish this line in cocobolo and ebony handles of a variety of shapes, with straight or cimeter blades.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Alexandria, Va —The R. P. Clarke Co. has been incorporated, with R. P. Clarke, president, and Conrad H. Syme, agent in this city; to conduct a Hardware business, etc. Capital stock, $5000.

Belton, Texas.—The Brown Hardware Co. has been incorporated with a capital stock of $20,000.

Buffalo, N.Y.—Adam Hauck & Sons have been incorporated by Adam Hauck, E. H. Hauck, A. N. Hauck and William J. Hauck to deal in Hardware. Capital stock, $60,000.

Canajoharie, N. Y.—K. A. Ellithorp has opened a first class Hardware store.

Canandaigua, N. Y.—F. W. Bryan Hardware Co has been incorporated by F. W. Bryan, Michael Dugan and P. F. Munger. Capital stock, $18,000.

Chattanooga, Tenn.—The Vance Hardware Co. has been incorporated by J. C. Vance, H. K. Vance, R. N. Phillips, R. D. Twinan and Paul Gass. Capital stock, $100,000.

Dubuque, Iowa.—P. Lang, No. 1643 Clay Street.

Franklin, N. C.—The Franklin Hardware Co. has been incorporated by C. E. Timberlake, J. D. Swinson and M. T. Swinson. Capital stock, $750, with privilege of increasing to $5000.

Grass Valley, Cal,—Brady & Robinson has been incorporated by A. F. Brady, D. J. Robinson, M. V. Leach, H. J. Robinson and A. B. Brady, general Hardware. Capital stock, $10,000.

Hopbottom, Pa.—E. M. Loomis.

Marathon, N. Y.—Seamans & Main.

Montreal, Can.—Provost & Baigne, Hardware, new firm, commenced business.

Montreal, Can.—The Pallascio Hardware Co. has been incorporated by Alphonse Pallascio, J. E. Quintal, Henri Robin, F. M. Lavioe and J. E. A. Loyseau. Capital stock, $20,000.

Muskegon, Mich.—The People's Hardware Co. has been formed by Oscar Hopperstead, Ralph J. Bush and Gus Dietrich, and will conduct a Hardware business at No. 63 West Western Avenue.

San Francisco, Cal.—Murch & Gray has been incorporated by J. H. Murch, A. E. Gray and S. A. Murch; Hardware. Capital stock, $25,000.

Changes and Improvements.

Bryan, Ohio.—W. E. Kauke, who was for many years engaged in the Hardware business in this town, has moved to Toledo to engage in the same trade there.

Columbus, Ohio.—The Kilbourne-Jones Co., wholesale and retail Hardware dealers, have sold out their retail department to a new firm to be called the Hall & Collins Hardware Co., recently formed by Frank Hall, Herman Hall and Cash Collins.

Correctionville, Ia.—The firm of Cathcart & Woodruff has been dissolved. Mr. Woodruff continues the Hardware business.

Deering, Me.—Mr. Wilson, of Portland, formerly of the firm of Goss & Wilson, auctioneers, has purchased the stock of Mr. Dyer's Hardware store in the Sparrow block, Forest Avenue, Woodfords, and will soon move the same into the store under the old Masonic Hall, recently vacated by W. A. Williams & Co., plumbers.

Dunkirk, N. Y.—P. B. Cary & Co. have concluded to sell out the Hardware branch of their business.

Edwardsburg, Mich.—C. M. Dennis, for many years engaged in the Hardware business here, has sold out to R. D. May and D. W. Ray, both of this place.

Elmira, N. Y.—The Hardware firm of G. A. Gridley & Son have removed from their quarters, at the corner of East Water and State Streets, to the premises now occupied by the W. C. Loomis Co., No. 307 East Water Street.

Fairville, N. B.—Wm. Bustin, furniture and Hardware dealer, has gone out of business to accept a position in the city. J. Stout has acquired his business and stock.

Glasgow, Mo.—W. P. Dautel, Hardware dealer, has bought the stock of goods lately owned by F. C. Griffith, which he purchased from G. C. Shackelford, trustee.

Great Barrington, Mass.—The Hardware stock of the Burgot & Lewis Co. has been sold to Noble B. Turner of Housatonic and Charles E. Platt.

Lorain, Ohio.—F. W. Edison, the oldest Hardware dealer in the city, has sold his business, including the lot and building at the corner of Broadway and Franklin Street, to the Krantz Hardware Co., of South Lorain.

Macon, Ga.—Judge Felton has passed an order allowing the Southern Hardware Co. to change its name to the Merritt Hardware Co.

Moline, Ill.—The Hardware firm of Parks & Stow, proprietors of the store at No. 406 Fourth Avenue, have dissolved partnership and Mr. Stow has retired from the business.

Morristown, N. J.—Geo. E. Voorhees has purchased Truman Scott's stock of Hardware and removed it to his own store.

Plainfield, N. J.—The J. P. Laire Hardware Co. are making some changes in the interior of their store to facilitate the showing and handling of goods. The high counters and stands placed about have obstructed the light, and these have been lowered and fitted up with small compartments in which small articles can be stored.

Pontiac, Mich. — H. B. Seagrave has closed out his Hardware stock, fixtures and good will to Rich & Hallett.

Richmond, Ind.—The Jones Hardware Co., now operating on Fort Wayne Avenue near the depot, with retail and wholesale Hardware, have purchased the lot lying east of the Adam H. Bartel Co.'s famous factory on North E Street, which had belonged to the Starr estate, lying at the southwest corner of Tenth and North E Streets. The consideration in the deal was $8000.

Riceville, Tenn.—Richard Cate has purchased an interest in the Hardware store of Owens & Murray.

Tiffin, Ohio.—J. N. Naylor has sold his Hardware business to the Crobaugh & Dam Co.

Troy, N. Y.—H. D. Hull & Co. have relinquished their charter as a stock company, and the Hardware business at the corner of Fifth Avenue and Congress Street will be continued under the name of H. D. Hull.

Waterloo, Ont.—William and Jacob Conrad have purchased the Hardware business of their father, and hereafter the business will be conducted under the firm name of Conrad Brothers.

Business Embarrassments.

Mannington, W.Va.—I. N. Owens, Hardware, reported to have made an assignment.

Mt. Vernon, N. Y.—George D. Ferguson & Col, dealers in Hardware, bicycles, etc., have filed petition in bankruptcy.

Rogers, Ark.—D. A. Oakley, Hardware, reported to have made an assignment.

Utica, Ohio.—A. S. Poland, Hardware dealer, has made an assignment for the benefit of his creditors to ex-Mayor G. M. Sipe. Assets about $1500, and liabilities not estimated.

Burglaries in Hardware Stores.

Chicago, Ill.—Schubert Bros., $200.

Essex Junction, Vt.—W. S. Teachout, cutlery.

Plainfield, Wis.—F. B. Rawson, revolvers.

Pomeroy, Ohio.—B. R. Remington; revolvers.

Stockton, Cal,—Austin Bros.; $200.

Troy, N. Y.—J. G. Manning & Co.; $12.

Westline, Mo.—R. M. Meader.

Fires in Hardware Stores.

Boise, Idaho.—Coffin & Northrup, Hardware, damaged by fire, at a loss of about $50,000; insured for $38,000.

Cambridge, N.Y.—R. E. Nicholson, Hardware, etc., destroyed by fire.

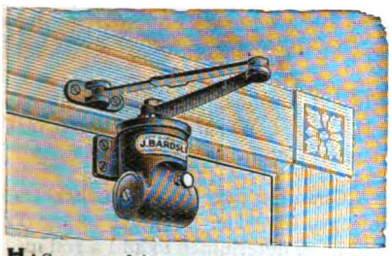
Chenoa, Ill. — O. Farnold's Hardware store has been destroyed by fire.

Clare, Mich.—A fire started in the oil room of the Clare Hardware Co. recently, and the fire department did excellent work in confining the blaze to this room. Loss $1000.

Corfu, N. Y.—Bradley's Hardware store damaged by fire.

Detroit, Mich.—The stock of the C. A. Strelinger Hardware Co. has been damaged by fire to the extent of about $10,000.

Newton, Pa.—Harrison C. Worstall's Hardware store has been destroyed by fire; partially insured.



Stanwood, Iowa.—Hart's Hardware store has been destroyed by fire.

What Cheer, Iowa.—Jones Bros.' Hardware establishment has been destroyed by fire.

The Blount Door Check

is described in a monthly bulletin of good things issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

Recent Fires.

Geneva, Ohio.—The Geneva Wheel Co., plant totally destroyed by fire at a loss of $40,000 or $50,000.

Toledo, Ohio.—Alfred H. Cummerow, bicycles, destroyed by fire.

Waco, Tex.—J. D. Thomas, dealers in bicycles, carriers, etc., damaged by fire at a loss of $8000 or $9000.

Recent Stove Notes.

At a recent meeting of the stove manufacturers of Eastern Pennsylvania at Philadelphia, it was agreed to advance prices ten per cent, or from 50&5% discount to 45&5%, this new discount going into effect immediately after April 19th. It was also agreed that the prices of the stove founders of New York and of the South should be respected in their districts, which is in return for a similar compliment to the Eastern Pennsylvania stove founders in their own markets. Steps were also taken for the extension of this agreement to the Pittsburg district.

The fourteenth annual meeting of the Stove Founders' National Defense Association opened its sessions for 1899 in the Grand Hotel, Cincinnati, Ohio. The address of the president and other matters of general interest were presented and discussed, and one of the things to be accomplished was the election of officers and the choice of committees for the coming year.

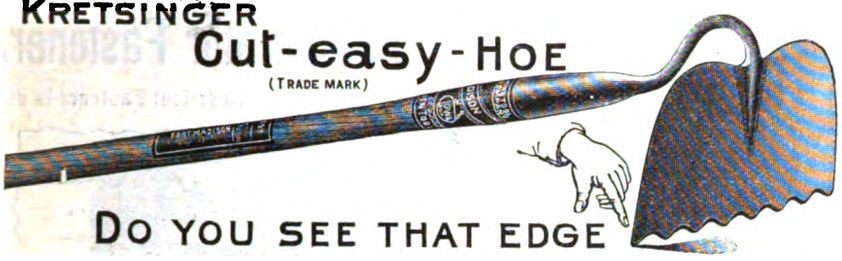
The promise is made that a large stove foundry will be erected in Portland, Oregon, large enough for the employment of some 250 hands. It is said that the Bridge & Beach Mfg. Co., of St. Louis, and the Cribben & Sexton Co., Chicago, are interested in this movement. A tract of land has been secured near the Union stock yards, and the erection of extensive buildings will be commenced at an early date.

A very attractive pamphlet has been issued by the Atlanta Stove Works, of Atlanta, Ga., in illustration of the grates which they manufacture. This pamphlet is of a convenient size for carrying in the pocket, and among the varieties shown may be mentioned a new square canopy grate with and without a summer front, the Atlanta Club House grates, grate ash pans, ash dumps, wall ventilators, etc.

The Northern Ohio Steel Range Manufacturers' Association, with headquarters in Cleveland, Ohio, have advanced the price of finished products 20 per cent. because of the increased cost of raw material.

The stove manufacturers of New England have organized, and elected the following officers: President, E. W. Anthony; vice president, E. W. Fiske; secretary and treasurer, John R. Prescott. The selling prices of ranges were equalized and revised at an advance over former figures.

A Forty-Mile Whistle.



The whistle on the new Atlanta Milling Co.'s mill has been constructed to be audible at Macon, 40 miles distant. This "humming bird" is eight feet in height and consists of three bells of a special composition of bronze and bell metal, arranged between two discs of steel. The larger bell has the mouths turned upward, and the other two their mouths turned downward; a 3-inch pipe conveys the steam through shallow openings in the circular disks. The bells are tuned to an eighth and a fifth of a chord, and harmonize as accurately as the best-tuned piano. Through the peculiar arrangement of the gongs they chime with the accuracy of a set of well-tuned bells, and the vibrations are such that the sound of the whistle is not harsh, but soft and low, and yet of such power that it can be heard for forty miles. The bell cost $150, and the amount of steam required to sound it would run a 75-horse power engine. Two steel wire cables are required to open and close the conical valves, operated by a pulley, that admits the steam.—*The Tradesman.*

Will sell property if wanted or will rent reasonable. Reason for selling, going to retire from business. Address BOX 92, care HARDWARE, No. 143 Chambers Street, New York.

English Patent for Sale.

EDWIN G. BENNETT, patentee and manufacturer of the "Boston Cold Storage" Butter and Cheese Cutters, notifies us of his desire to dispose of his English patent on this article. As a ready sale is being found in the United States for this cutter, which we believe enjoys the distinction of being the only tool of its kind on the market, it is reasonable to suppose that the foreign sale should be equally satisfactory. All inquiries should be addressed to E. G. BENNETT, No. 2 Parlin Street, Everett, Mass., U. S. A.

Patent for Sale.

ICE-SCRAPER or Shredder Patent for sale. Best and cheapest hand device yet made. Address "PATENTEE," care HARDWARE, No. 143 Chambers Street, New York.

Agency Wanted.

Foreign Agency Wanted.

A GENTLEMAN with large experience and with good connection in all the principal towns in Newfoundland, is prepared to undertake additional agency in Hardware trade; good testimonials and references from firms represented. Address GEO. B. PARSONS, P. O. Box 331, St. Johns, Newfoundland.

English Agency Wanted.

A GENTLEMAN who has been in the Hardware and cutlery line in England for twenty-five years wishes to represent American houses in light iron and steel line, patented novelties, etc., or the sole sale for England on his own account. Address Box 96, care HARDWARE, No. 143 Chambers Street, New York.

Agency Offered.

AGENTS wanted to handle Burr's Cushion Stroke Adjuster, greatest wind-mill attachment ever invented. Quick seller, and liberal commission. BURR-FESLER CO., Batavia, Ill.

WE would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "BOX 88," care HARDWARE, No. 143 Chambers Street, New York.

WANTED agents to handle a patented, labor saving device of universal sale; investigation solicited by men who desire quick returns from a legitimate, profitable business. Address (C) BURR MFG. CO Cleveland, O., 823 Society for Savings.

PROPER Clothes Line Reel; simple, strong and durable; needed at every home. A money maker for agents. BURR-FESLER CO., Batavia, Ill.

Business Chance

FOR SALE—A complete table cutlery plant, with up-to-date machinery, all of which is nearly new, and in good order for immediate operation. A splendid opportunity for a few practical cutlery men, with limited capital, to build up a paying business, as the entire product can be sold on contract in advance.

For terms and particulars, address

J. B. WHITEHEAD,
Assignee National Cutlery Co,
Rockford, Ill.

Attention, Salesmen!

SALESMEN on uncovered ground can add hose, tires and full rubber line. Free samples. Cash commissions. Protected ground. One salesman earned $3900 in 1898. MINERALIZED RUBBER CO., New York.

Attention, Manufacturers!

FIRMS contemplating going into the enamelling business or wishing a new formula to enable them to add to their present lines in one or two coated ware, are invited to correspond. Highest references. "EXPERIENCED ENAMELLER," care HARDWARE, No. 143 Chambers Street, New York.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

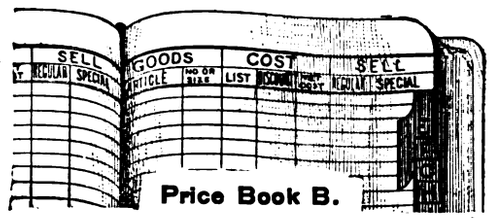
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



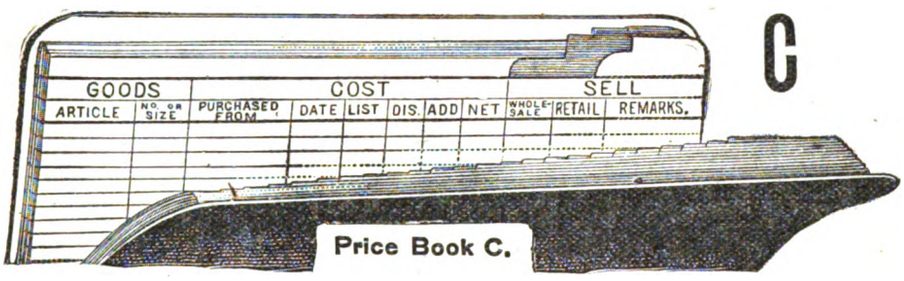
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

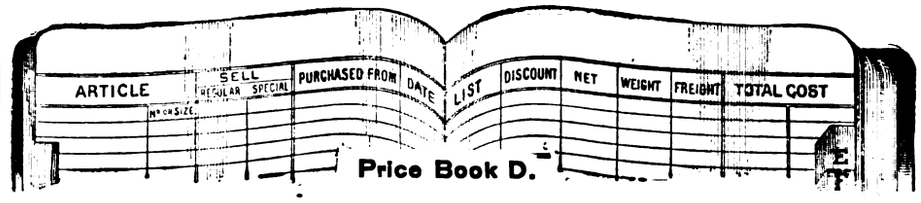
B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 400 pages with flap, 1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

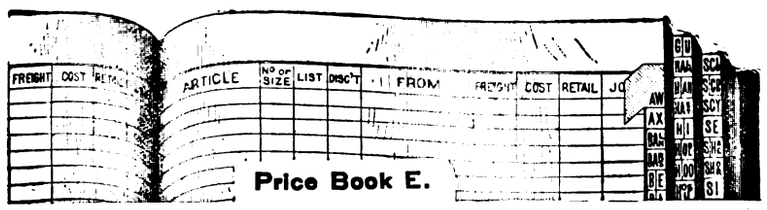
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2 50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CHI For Iron, turn to IRO
" Parers, Apple " PAP " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

WHY IS C. E. JENNINGS' NEW AUGER BIT No. 1½

THE BEST BIT FOR WOOD BORING IN THE WORLD?

Because: There are good bits made for **hard wood.** The L'Hommedieu Ship Bit is an excellent tool for this purpose, but it is not designed for fine cabinet work or soft wood. There are good Bits for Soft Wood, but fail when used in **hard wood** We have combined two **principles in one,** and think we have solved the problem of putting a bit on the market that is suitable for all around use. Prices furnished the Trade on application.

HARDWARE

W. B. Belknap & Co., Louisville, Ky.: "Your edition of April 10th was a beautiful example of modern newspaper making."

A correspondent of a pessimistic turn of mind, and who believes himself a prophet, has condensed his view of combinations, in this epic:

Trust?
Bust!

Exports of merchandise from the United States to China in the fiscal year about to end will be larger than those of any preceding year in our history. A decade ago the exports to China were less than three million dollars, and to China and Hongkong combined were a little over six million dollars. In the fiscal year 1899 our exports to China will be more than thirteen million dollars, and to Hongkong more than six million dollars, making a total to China and Hongkong of over twenty million dollars, or more than three times as much as that of a decade earlier.

A Harlem Hardwareman relates this story: We have up at my house, a domestic who was foreign only a short time ago, having come fresh from the isle of emerald freshness. She had never been to a theatre in her life, until her sister gave her a treat of that character, some evenings ago. At half past eight she came into the house, white as a ghost, and breathless with running. My wife said to her, "Why, Katy, what is the matter?" "Shure, mum, 'tis the devil's own place! No sooner was we seated, when out went the lights, and a whole half of the house slid up to the heavens. I didn't stay to see how many was killed, mum!"

The American axe is always heard ringing in the forests of Paraguay. The hardwoods that are there grown require steel of a first class order, and of course they must come to this country for it. They use no fuel in that country except wood and charcoal, and every household must therefore have its own axe. The lower grade axes come from England, while Germany, which as yet has no foothold in that market, is busy sending samples. Double axes are not used, nor are hatchets, as the ever-ready machete is used for lopping branches, and small work of that character.

The young man who crawled through the window of a New York barber shop, and when caught told the judge that he was introducing a patent automatic gas burner, and took that method of calling attention to it and himself, found that he had attained more publicity than he had bargained for. The barber went at him with a razor; the policeman prodded him with a club; the judge gave him sixty days on the island. Although the newspapers all advertised his burner by printing a full account of his adventure, the probability is that his long residence over the river may cause the fickle public to forget all about his patent burner and himself.

No matter what else may fail between seed time and harvest, there is never a lack of opportunities for men who have blood in their veins, and eyes with which to scan the horizon. This may sound trite, and contain an echo of sermonizing upon an old text, but if a thing is worth saying, it is worth repeating so long as there may be an audience to listen. There isn't a day that passes, in which some man has not struck out in a new direction, and made a record or a fortune for himself. All that one needs is brains, industry, an eye with which to see, a hand with which to work, and a foot with which to kick, if necessary. Of course luck has something to do with it, but luck and work keep pretty steady company.

Representatives of the gentler sex have been attending a national suffrage convention, in Grand Rapids, Mich., and an afternoon off was taken, for the purpose of visiting the works of the Bissell Carpet Sweeper Co. The ladies were not so far out of the beaten track of domestic life, as to render them insensible to the allurements of a place that has done so much to ease the labor of housekeeping; and they were all the more interested in the works because the president and active manager of the company is a woman. Each delegate went away happy in the possession of a valued souvenir, in the shape of a toy sweeper, complete in every respect, made of the finest material, and appropriately inscribed in honor of the convention. That's the way the Bissell people do things—no half-way measures.

The glue trust went through, because the members stuck together. The leather trust put its whole sole into the matter, and succeeded. The rubber men stretched a point and made an agreement. The wheel trust went spinning on to success. The yeast trust was followed by a rise in prices. The milk trust took the cream of the business. The screw men wormed their way together. The ice trust froze the outsiders. The gas trust inflated things to great proportions The starch trust stiffened prices. The paint trust painted things red. The oyster trust proved to be no shell game. The elevator trust sent things up and down in a lively manner. The wringer trust put a squeeze on the little fellows. The saw trust ripped things open. The salt trust was far from fresh. The crockery trust smashed prices. The fertilizer trust caused a stir in the neighborhood. And the window glass trust let in the light on many dark things.

The opening of the wheeling season gives especial interest to some figures just prepared by the Treasury Bureau of Statistics. These tables, which present the statistics of bicycle exports during the past few years, show that American wheels are now being ridden in all parts of the world. In the wilds of Mexico and Central America, under the blazing skies of Cuba, Porto Rico, and other West Indian islands; across the pampas of Argentine, Brazil, and other South American States; amid densely populated areas of China, British East Indies, and Japan, and in the jungles of Africa, the American wheel is making its way. Even in the great manufacturing countries of Europe, where workshops and skilled workmen abound, millions of dollars' worth of American bicycles are sold each year. During the four fiscal years 1896, 1897, 1898, and 1899, the exportations of American bicycles amount in round numbers to twenty million dollars.

HARDWARE

VOL. XIX. MAY 25, 1899. NO. 4.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Advertising Manager

EASTERN MANAGER:
FRED A. CATON, - - 31 Milk St, Boston.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Advertising as a Fine Art.

Among the commendations which have been bestowed on the Hardware Jobbers' number of *Hardware*, of April 10, 1899, a number have been especially emphatic concerning the artistic character of the advertisements displayed therein.

This has been all the more gratifying to the editors and publishers of *Hardware*, as one of the things had especially in mind in the preparation of that issue, was to demonstrate the fact that as much real art can be shown in the writing, the setting up and the printing of a Hardware advertisement, as is possible in any other line of trade—those departments of manufacture which are presumed to lend themselves more readily to the demands of art, not being excepted.

No man who knows the difference between a rosebud and a chunk of wet plaster, can run through the pages of that special number without being impressed by the fact that a high artistic sense has been shown in the advertising display. This includes all the features required—the pen of the man who wrote the card, the type selected by the compositor who set it up, and the skill of the pressman who made ready the form and saw that it was printed properly. Nor can any man run through those 196 pages without going over them again and again, and finding new beauties and new features of interest with each quest. It may be said in passing, that a great improvement has been shown in recent years in the preparation of advertising matter. The manufacturer has been educated into the understanding that it is not wise to turn the preparation of his trade journal cards over to the office boy and the porter, and has come to the realization that a cut prepared with a maul or a pickaxe is not sufficient to fulfil the requirements of modern advertising art. There has been a long step forward taken in this department of the advertising business—for which let us all give hearty thanks.

There is a mighty big difference between mere pretty advertising and good advertising. A card may be as neat and dainty as Cinderella's slipper, with poetry and sweet violets suggested in every line, and yet possess not one particle of fetching power—with not a hint of persuasiveness from the first line to the last. The reader may look at it, and take no impress from any of its features. On the other hand, some plain and everyday statement may be made with such direct sledge-hammer force that it will remain in the memory, and bear results of a long continued and permanent character. The ad. that does the work is the one that hits the *solar plexus* of the man who buys goods.

Returning to our text, we feel fully warranted in the statement that there never was a series of advertisements put together in which high art and business effectiveness were united in a higher degree than in the many little and big cards shown in the Jobbers' Number above referred to. The gentlemen who had their preparation in charge, seem to have been imbued with the spirit of the occasion, and to have risen to the level of their opportunities. This statement will be agreed to, we are sure, by any one who goes carefully through that number.

Needed Discipline for Morocco.

It all depends, in some cases, whether the might stands behind the right—especially when you are dealing with nations that cannot understand authority that does not visibly show the emblems of authority. America's threat, made on paper, had little effect with that shifty individual, the Sultan of Morocco; but when the cruiser *Chicago* on her way to the far East, shoved her nose into the harbor of Tangier, and her commander sent an official intimation ashore to the effect that he had come around to collect that little bill, the Sultan once more went down into the pockets of his tax-payers, and the demands of America were satisfied. There is something quite effective in cold iron when put on exhibition at the right time, and in the right place. A few yards of red, white and blue flying in certain foreign harbors will hereafter have a quickening effect upon more than one sluggish political system. The warships of America are somewhat better known to the world over than they were a year and a half ago, and the respect which the foreigner now feels for our flag has increased mightily since the battles of Manila Bay and Santiago harbor have been written among the things of history.

Some years ago, the less than half-civilized peoples on the southern shores of the Mediterranean conceived the idea that they could do about as they pleased with Americans and their ships, and the result was that they were taught a lesson by the old American wooden navy, that they were a long time forgetting. In recent years, the authorities of Morocco have been so conducting themselves that it is possible another school of discipline may have to be opened, and if it is, about one lesson will be enough. These officials have made an especial point of causing annoyance to American merchants who were attempting to do business in that country, and to local dealers who were endeavoring to introduce American goods. In more than one case these agents have been cast into prison, upon trumped-up charges. The native interpreters and other servants connected with the American consulate, have been interfered with, in direct violation of existing treaties. There seems to have been a systematic official endeavor to prevent American goods from getting a foothold in that country.

The State department can very profitably look into this question, in the interest of the producers and manufacturers of this country.

Digitized by Google

One Great Influence to be Reckoned With.

There is one incidental feature connected with the recent great combinations of industrial capital that must not be overlooked or underrated in any summary of results. There are thousands of trained and experienced traveling men whose services have been summarily dispensed with, and before whom there is absolutely no open door for like employment. The sources of livelihood for these thousands are thus destroyed by one stroke, and the effect will be felt in more ways than one.

These men have been trained from youth up in the sale of goods upon the road; they have made the profession of traveling salesmen one to be respected and honored, and lifted it to a high level among commercial pursuits. The old time "drummer" has disappeared, and a right-minded, sober, industrious and thoroughly reliable traveling salesman has taken his place. Many of these men have grown gray in the service, and while they are masters of their profession, they are fitted for nothing else, and are too far advanced in years to learn a new business. They find themselves cast out upon the world, at a time when they have, by industry and long acquaintance, built up a trade which possessed to them a substantial value —every dollar of which they are now deprived.

One estimate places the number of traveling men whose services have been rendered needless by combinations among merchants and manufacturers, at seventy-two thousand. When we add to these the heads of departments, clerks, local agents, and other employes who will be set free from labor by the concentration of many businesses into one, there results a great army of intelligent men who will eagerly respond to any appeal directed against the agencies that have thrown them out of employment. The trust and the combination will surely enter into political consideration during the next half decade, as they never have before, and the united influence of the army above described will be thrown with its full force against them. They will be compelled to meet one of the most powerful and persistent attacks within political lines, that any form of industrial or commercial development has ever been compelled to face, and the issue thus raised will not be settled in one campaign. There are many significant signs already upon the heavens, and many thoughtful men believe that only the first whisperings of the storm have yet been heard.

American manufacturers made their highest record in foreign markets last month. The figures of the March exportations, which the Treasury Bureau of Statistics issued this month earlier than on any previous occasion, show that the March exportations of manufactures were $36,025,733, or more than 25 per cent. in excess of any preceding month. In March last year the exportations of manufactures were $28,214,450; in March, 1897, $25,876,861, and in March, 1896, $19,125,795. On only two occasions, March and December, 1898, have the exports of a single month ever reached $28,000,000, while in March, 1899, they were, as already indicated, $36,025,733, an increase of 50 per cent. over those of the preceding month, February, 1899.

The men-of-war of the ancient Romans had a crew of about two hundred and twenty-five men, of which one hundred and seventy-four were oarsmen working on three decks. The speed of these vessels was about six knots an hour in fair weather.—*Scientific American.*

Blame It All to the Shad.

The New York house which failed in the receipt of needed goods because of the run of shad on the New England coast—due to the fact that the employees dropped their tools and went fishing—have received a second communication from the manufacturer, based on the recital of his woes in the last preceding issue of *Hardware*.

"We are highly honored by *Hardware*," this manufacturer writes, "through its acknowledgment of our exceptional brain power to devise such an 'unique and original' excuse, but we feel that all honor is due to the *shad*, upon which we live from April 1 to June 15. It seems to us quite reasonable, that if we possess sufficient brains to offer the *leading excuse of the day*, we possess sufficient brains, also, to offer the leading goods of the day, in our line,—a fact which is willingly acknowledged by the trade, but which remains to be acknowledged by *Hardware* before it can be called an axiom.

"We note with pleasure that we have departed from the usual form of etiquette, and coined an excuse which will probably be added to the list of those now in common use. How great would be our pride, should it ever head the list!

"All of this pleasure passes away quickly, however, as we look at the pile of unfilled orders before us, and think of the poor prospect of filling them. We shudder at the thought of all that we shall be accountable for in the world to come, for forcing our impatient customers to violate the third commandment so often and so unreservedly. We have on file here the literary efforts of several of your prominent merchants,—expressions of eloquence which would not look well if placed in a prayer book or hymnal. These expressions are pleasant reminders of the high esteem in which we are held at present, as well as of the ex-employees whose happiness and contentment are supreme, at the sight of 'the shining shad coming over the side of the boat in Scriptural fulness.'

"Please deliver to *Hardware* our kindest regards and best wishes, together with the suggestion that they brush up a little on shad fishing before they go at it again, or, better still, ship the editor to us, and will give him a few points on shad fishing any time before June 15th, and on manufacturing after June 15th."

Farwell, Ozmun, Kirk & Co., St. Paul, Minn., have issued a handsome and artistic catalogue of their Locks and Builders' Fine Hardware. It has been arranged and edited with skill and a fine sense of the fitness of things, and printed upon a quality of paper that allows its numerous illustrations to stand out in a most attractive manner. It contains 226 pages, ten by twelve inches in size, every one of which is devoted to the immense line of goods of this description which they carry. In a note of introduction they say: "The many late improvements in mechanical construction and beauty of design, have been carefully considered in the selection. In arrangement, we have aimed to show our line in the simplest and most satisfactory manner for the convenience of the dealer. No repetitions or line groupings are given that tend toward confusion. Kindred goods are so arranged that comparisons are easily made. We shall be pleased to assist Hardware dealers and architects in making selections, and to submit through the proper channels of trade, estimates from either lists, or plans and specifications."

The Magnolia Metal Co., with headquarters at Nos. 266 and 267 West Street, New York, have added one more to their many centers of influence and distribution by opening an office for the special benefit of their Canadian trade. This will be located in room 524, Board of Trade building, Montreal.

A Southern House and Its Employees.

A representative of *Hardware* who was passing through Greensboro, North Carolina, some days ago, had a very interesting conversation with C. H. Ireland, the secretary and treasurer of the Odell Hardware Co., one of the leading jobbing houses of the South.

The correspondent had recently seen an interesting and suggestive article in the *Charlotte Observer*, in regard to some special rules adopted by the Odell Co., as to the employment and regulation of help, and asked Mr. Ireland concerning them.

"I don't know as our rules are different from those of most houses," was the response, "but we have adopted some that experience has shown to be of good to both our employees and ourselves."

"For instance?"

"Well, there is one we have adopted and have been running under ever since we have been in charge of the business, and I have no objection to saying to you that when a young man applies to us for a position, the first question asked of him is this: 'Do you drink'? If answered in the affirmative, that closes the transaction, so far as we are concerned. We mean not only intoxicating liquors, but wine, beer, or anything else in that line. If he says he used to drink, but has not for some time, we investigate pretty closely as to the conditions that caused him to drink, and caused him to stop, and if there is any possibility, or at least any probability, of his doing so again, we do not employ that young man. If he answers in the negative, then the question is with regard to his associations and habits; as to whether he has any vicious habits, and then as to whether he is addicted to the habit of profane swearing. If he is filthy in his conversation, and addicted to profane language, it ends right there. Then we try to investigate the surroundings from which he came. We investigate as far as possible as to how he stood in his own community. If he is a member of a church, we prefer it. We do not make this a necessity, but he will have to be free from all moral taint if he enters our employ. Our reason for this is not only to render us safe in the character of the men we employ, but it protects the men themselves from unpleasant associations every day."

"How does it work?"

"Well, we have been criticised somewhat for trying to apply Sunday School rules to business. We do not do anything of the kind. Any man can get drunk in our employ, as quick as any man out of it. The only stipulation we make is as to the character of each man we have in our employ, and what he shall be while he is in our employ. If he wants to get drunk, all in the world he has to do is to come up like a decent white man and resign his position, and go out and wallow in the ditch like any dog, and he is at liberty to do so as much as if in the employ of a man who does not care anything about the character of his employees. We believe this to be the best cash register system that can be adopted. I have yet to see the first cash register system which will prevent a man from stealing if he wants to steal, and I believe the best thing that can be done to prevent such a thing is to get sober, honest, moral men, and trust to these principles rather than to detective force to keep them honest. I believe men are very largely affected by the associations they have. I believe there is many a man to-day who has gone to his grave loved and respected by his fellow men who, if he had been differently surrounded, might have been a criminal and dreaded by his friends and neighbors. There is many a man on the gallows who, if he had been placed in different associations, might have been a blessing to his State, city and business and gone to his reward after having lived a life of faithfulness. Believing this as I do, it is not a matter of puritanical laws I lay down, but I believe it to be best for all concerned.

"As to the associations of the young man. Once having entered our employ, we stand squarely back of him. We don't propose to watch them to see whether they do their duty or not. We place every man on his merit and character, and if there is anything in him it will show in a little while. If there is nothing in him, we tell him frankly that there is no future for him here and to go into something else. If he is faithful and makes mistakes, we bear them and not the young man. We do not propose to put our endorsement on, and become responsible for, men to make mistakes, however, if they are not at their very best, and therefore it counterbalances itself.

"Another thing. We try to have the association of our young men as much as possible among themselves. The number we have employed here ought to furnish congenial associations for every man. We would not lay it down as a rule that a man should not find his associations outside of this establishment—he shall act as he pleases with regard to that, but we believe that as a rule a man who can't find among forty-five of the best young men of the town associations sufficient for him, has something lacking in him, and as a rule they don't stay with us."

"How about smoking?"

"The rule on that point is that no man shall smoke around our establishment. We do nothing of the kind ourselves, and we do not permit our men to do it. We advise every young man against it, believing it a foolish and useless habit that can do no good, and we would much prefer that they would not do it. However, that is a matter of their own, and we do not undertake to control a man in regard to smoking a pipe, cigar or cigarette after he gets out of business hours, but if he was inclined to keep up the cigarette habit very long, I think I should have occasion to remonstrate with him on a habit that is calculated to lead him to distress and ruin.

"We have had several cases in which men have disappointed us. They have undertaken to drink on the sly, and when we have found it out, we have simply given them their walking papers. We have discharged some of these, and they afterward wrote us thanking us for the faithful manner in which we dealt with them. We have also received letters from the parents of these young men expressing their approval of the treatment, stating that our kindness to their boy in discharging him brought him to his senses more than anything they had ever been able to do for him.

"This house, I suppose, has discharged between three hundred and three hundred and fifty young men first and last, and if there has been one who has gone away with ill feelings towards us, we have never been able to discover it. We do it with all kindness and in sympathy, talking to them plainly, and in a friendly manner, and letting them feel that we are the best friends they have. A great many of them have gone into business after they left us. They have always done their trading with this house. They have gone into other lines and departments of business. They have placed their influence in favor of this house after they quit us, so we feel that men will recognize the principles of justice and righteousness when applied to themselves as well as to somebody else who does not affect them. In other words, we believe there is as much an opportunity for Character Building in business as there is in church privileges. We don't believe any man should run his business simply for the money there is in it, but there is something higher and better than mere money gaining. When we get to the point where we have to look upon our business as simply a money-making machine, but as nothing else, then we shall quit and go into something else."

The charity that begins at home is often so discouraged that it never gets any farther.—*Exchange.*

NEW ENGLAND HARDWARE ASSOCIATION.

The regular monthly meeting of the New England Hardware Dealers' Association was held on the evening of May 10th, at the United States Hotel, Boston, Mass.; and, in point of earnest and interesting discussion, was possibly the most productive of beneficial progress along the lines of expansion held since an aggressive campaign was decided upon. Those members who hitherto have been content to remain passive and allow the organization to drift in the less profitable, if more pleasant channels of a social function, seem now to have awakened to the necessity of arousing themselves from their lethargy; and evince a keen interest in all that tends to a stronger, more forceful, and more useful business association.

Among the guests of the evening none was listened to with more attention than Herbert E. Jennison, of Fitchburg, Mass., president of the State Association of Master Plumbers; whose work on organization has been particularly effective. Mr. Jennison's speech will be found in part later on. Among the other speakers were Chas. C. Adams, president Massachusetts State Board of Trade; whose remarks were unfortunately much curtailed owing to other pressing engagements; and R. R. Williams of the *Iron Age;* who referred at some length to the means and ways used by the Western Hardwaremen in organization work.

The resolve of the members to not wholly eradicate the social features of their meetings, was never more acceptably evidenced than by the presence of Miss Helena Jacobs, Miss D. Emily Lucey, and Leslie F. Mansfield, who as guests of the president, furnished the music of the evening. Miss Lucey sang several solos; and her full clear soprano evoked the heartiest applause; while Miss Jacobs' taste and execution as an accompanist was equally appreciated. The consensus of opinion among the members was that the routine of business discussion would be much brightened by future visits of these talented ladies.

After an informal reception the members and guests sat down to dinner at 5:15 P.M. Grace was said by the Rev. Mr. Fisher; and during the discussion of an excellent menu, the minutes of the former meeting were read and approved; and all preliminary business disposed of, in order to economize time for the speakers to follow.

Owing to the indisposition of Hiram G. Janvrin, the Chairman of Committees, no reports were forthcoming as to progress made during the month.

The first speaker of the evening was Mr. Adams. Speaking of local associations, he said that for eighteen years they had been trying to accomplish one in Lowell, without success, until two weeks ago. Since then one had been formed; and so far, was working most successfully. He believed that no town, however small, where there was more than one dealer, could afford to be without affiliation; both locally, and as a unit of the State Association. He referred to the benefit to be derived from a powerful State organization; and hoped eventually to see a perfect National one.

The President then introduced Mr. Jennison, who prefaced his talk on organization work by saying that he had come largely out of curiosity to see what this body of Hardwaremen looked like. He said that President Parlin was responsible for introducing a member of a trade, particularly referred to as "daylight robbers." He did not know how plumbers gained such a reputation, unless they, themselves, had spread such stories in order to prepare their victims for a substantial bill. He called attention to the fact that plumbers were the poor men in their communities; while, judging from the well-groomed appearance of the Hardwaremen present, he did not consider it necessary to form any association among them, in order to bolster up prices.

The speaker then referred to the many advantages already derived from the Plumbers' League. The National League had already made it impossible for a jobber to sell direct to a consumer under any consideration. The State League was responsible for the State laws making sanitary plumbing an essential. This had resulted in the quality of work being improved 100 per cent. since its operation. Another good effect of association had been the almost total eradication of the "curbstone plumber;" an individual who, usually owing to poor work, found himself out of employment; and put in plumbing on a five per cent. basis, the customer guaranteeing his bill for goods with the jobber.

It had been their experience that the life and soul of organization consisted in the local affiliations. When these were in a good healthy condition, the State and National ones were bound to prosper, as there was always something to offer the members. All their efforts were therefore concentrated upon forming thorough local associations. Within the past few weeks between two and three hundred new members had been enrolled. This had been accomplished only by putting intelligent, determined men out on the road; and sticking to a town until an organization had been effected. They had found that it paid to put out only the best men; and remunerate them properly. If one man failed in any town, send another man there, and still another if necessary. He cited one of his own experiences, where the first man he visited announced that he had a shot gun ready for any other plumber who entered his shop; but this man was now president of his local association. In closing Mr. Jennison called attention to the fact that plumbers and Hardwaremen carried some identical lines; and urged that there should be a mutual understanding between both on prices, in order to avoid unjust competition. This had already been done by the two Pittsfield, Mass., associations; and had been found very satisfactory.

President Parlin then read a letter from Henry R. Peirson, of Pittsfield, who had been invited to be present and speak. While regretting his inability to attend, the writer took occasion to offer some suggestions. Among these were:

"Don't expect too much at once. Lay in a good stock of patience, and draw freely upon it. Don't meet alleged cut prices until you have investigated the report thoroughly; as in nine out of ten cases, these reports were untrue. Talk face to face with your competitors; and have a great deal of charity. Acknowledge your mistakes freely. Raise your prices gradually to the proper point; as high prices simply invite competition from the outside. Do not talk Associations and Trusts to your customers; as they will be happier in knowing nothing of such things."

President Parlin remarked that, however diffident Mr. Peirson might be about speaking, he certainly contrived to embody many good ideas in his letters.

The next speaker was R. R. Williams, of the *Iron Age*. After some preliminary remarks, in which he referred to the complexity of the Hardware business which elevated it to the dignity of a profession, the speaker turned his attention to the origin of the association idea; and the benefits to be derived therefrom. The commercial conditions were

Digitized by Google

constantly changing with lightning rapidity; and he must indeed be a shrewd man, who could forecast the changes for the next five years. In order to keep pace with these changes, it was absolutely necessary that merchants should get together and understand each other's attitude. He expressed the opinion that the proper place to begin the reform was at home. Each merchant should see that his own business methods were pure. He considered that the most important advantages to be gained were: 1st. Early closing; which was necessary in order to give the necessary attention to the physical and mental culture which every merchant owed to himself.

2nd.—Harmony of policy; necessary to the successful meeting of outside competition, and 3rd.—The arrangement and classification of credits. The speaker quoted from letters received from Western Associations giving details as to how this was best to be accomplished.

The President then introduced W. P. Cohoe, of Harvard University; who promised to deliver a lecture on the properties, constituents and their effects, of iron, at next monthly meeting. Mr. Cohoe said he would be glad to receive any suggestions from the members as to what would interest them in this relation. Several questions were put; and will be dealt with fully in his coming lecture.

After a vote of thanks to the visiting speakers, and to the ladies, who had contributed so much to the evening's enjoyment, proposed by D. Fletcher Barber, the meeting adjourned. FRED A. CATON.

It Troubled This Traveler.

Editor Hardware: I don't think that any editor has a right to interfere with business.

I have a bill of steen-steen dollars against your concern, for time I was compelled to lose in the middle and final days of April, because of that confounded special Jobbers' number you perpetrated on the 10th.

I am a travelling hustler, who visits the jobbing trade. In almost every place I visited, I was held up, and made to wait, because the man whom I wished to see, had his nose in the pages of that number. Then when he turned to me he was more anxious to discuss some article on the jobbing trade that he liked or did not like, than he was to talk business. Who is to make me good for all this lost time?

Seriously speaking, I never saw a trade journal more thoroughly distributed throughout the United States or more generally read and discussed, than that was. It was everywhere—in the hands of proprietors, buyers, clerks, type-writers, and all. It must have made a smashing record on somebody. I have no objection to your doing all the good work you can, but the next time your burning missionary zeal takes this form, please let me know, so that I can stay at home and save hotel bills until the flurry dies down. Respectfully yours,

Rochester, May, 1899. A SALESMAN.

New Members Hardware Club.

At a recent meeting of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the club:

Fred. Irving Simpson, Sickels & Nutting Co., No. 35 Barclay Street.

Abel H. Gilbert, No. 170 Times Building.

John T. Underwood, No. 30 Vesey Street.

F. E. Kohler & Co., Canton, Ohio, whose general agents are Allerton-Clarke Co., No. 97 Chambers Street, New York, announce that they will offer their new line of Hollow back D handle all steel shovels under the F. E. Kohler brand instead of Anti-Combine, as heretofore announced, as they prefer to build up a trade on these goods under their own firm name. As soon as dies are finished they will be prepared to furnish scoops, coal shovels, etc.

"No More Scrappin' on de Second Floor."

"Say!" said the new boy in the Chambers Street Hardware store to the chief packer, "what sort of a bluffer is de old silk-hat who squats up dere in de back office?"

"Gosh, I hope you didn't bunk up agin him?"

"Dat's what. And I guess he won't forgit it, neider."

"How come it?"

"How come it? Not tru me. The crank who runs me end of de floor tried to hold me down to a lot of tings dat don't come under me scale of wages, and I kicked. Plug-Hat happened along, and he says, 'Hello, boy, what's de matter wid you?' I pipes me story, and he says 'Your'e a new boy, ain't you?' and when I says 'Yes,' he pipes me something about newness and freshness being two tings altogedder. Then he says, 'Come down stairs wid me,' and down we goes."

"Thought he was going to raise your wages?"

"Well, he didn't. When we got down among dem leather chairs, wid de type-gals eatin' cake on de sly, and sniggering at me, de old man says 'Take a chair Robert.' Say, but tings were coming me way. Then says he, 'They tells me you was de new boy on the second floor, and dat you were set at work dat don't belong to you?' An' I says, 'You got it on de dead level, boss. I don't run me only two legs off fer tree plunks a week for no man.' 'Plunks is good,' he says, 'and you look like a boy dat's got good blood, and we wants to make a man of you. But dere's one thing'—and he put his head down and looked in me eye—'dere's one thing, Robert, that we might as well settle now. You go back and do just what you are told, and when you're spoken to, jump as if dere was a hornet's nest in your little panties, or on goes your hat and out you goes tru dat front door. See?'"

"And what did you do?"

"Ain't I here? Say, he's a slick one. I ain't had no trouble since. Me and Plug Hat understand each odder now, and dere's no more scrappin' on de second floor!"

A Sad State of Affairs.

Editor Hardware: "When shall we three meet again?"

Manufacturers, buyers and salesmen can look backwards with many unavailing regrets, unless they profit by experience.

It is useless for either member of this famous trio to point the finger of scorn at the two associates, as there is not much choice between them. We have a good many able and sensible men in the business but, there are too many who are constantly doing foolish things, and too many who are regardless of the ethics of business, and from the "foolish" and "regardless" proceed the afflictions of business men.

Manufacturers, on the demand of the buyers and salesmen, have striven to outdo each other in copying, infringing and reducing the quality and cost, until we are selling large quantities of third quality and small quantities of first quality goods, much to the annoyance of the consumer and loss to everybody, and this has necessitated the doubling of the tons of goods sold, to keep up the amount in dollars, thus keening competition and causing a strife for everything in sight, to the consternation of the buyer who carried a large stock for the accommodation of the small buyer.

When my ancestor landed in New York, men lost their property by pirates, highwaymen, and Indians, and to-day we lose our property by burglars and misrepresentation, which is a great improvement, and this progress will continue. Yours respectfully,

New York, May 13, 1899. SALESMAN.

The J. E. Bolles Iron & Wire Works, Detroit, Mich., have issued a pocket edition catalogue of their iron, wire, steel, brass, and electro plated work.

HARDWARE TRADE IN UNITED STATES.*

In the growth and development of a new country the Hardware trade has necessarily an intimate and important part to play. From first to last it is designed to aid and supplement man's efforts. The settler's ax, the farmer's plow are all contributions of the Hardware store. From it came the tools and nails that set up the first homes of the land. And in time, when the wealth of the individual and the country has its apt and material expression in beautiful homes and handsome public buildings, it is the Hardware trade which provides, in metal trimmings and finishings, a thousand and one contrivances that our modern standards of luxury and convenience require.

As might be expected of so non-committal a word, which only stipulates "hardness" as a character of its products, Hardware includes a great variety of articles. These, in their manufacture and sale, fall naturally into certain groups, any one of which frequently constitutes an interest in itself. Domestic Hardware includes agate, tin, and iron utensils, and other household furnishings. Builders' Hardware explains itself in a long line of bolts, locks, knobs and trimmings in addition to building staples, while tools, agricultural implements, machinists' supplies, cutlery and saddlers' Hardware are common trade distinctions.

The history of the Hardware industry in America is coincident with the history of the United States. Americans are justly proud of their century and a quarter of national development and for the same time the annals of Hardware manufacturing are an equally creditable record of growth and progress.

At the birth of the nation the industry practically did not exist; for the royal government, recognizing in the growing colonies an important outlet for English products, had tolerated no competition and suppressed all manufactures. Our early Hardware was therefore imported, and for the most part of English make, the mother country continuing to be the principal source of supply throughout the colonial period. With independence came the beginnings of Hardware manufacturing, which, if small, were at any rate prompt and significant. Soon the war of 1812, emphasizing the separation from England, and throwing the people on their own resources, gave a great impetus to all manufacturing interests. But American Hardware in a differential and distinctive sense dates from about 1840, when the struggling American manufacturer began to get a foothold. Gradually the superiority and more attractive appearance of his goods were recognized and the foreign article supplanted. To-day we not only satisfy the home needs, but have an export trade which has more than doubled in the last decade. American tools especially are invading every market in the world, while England and Germany have been forced to concede America's ability to maintain her place in the ever-increasing competitive struggle in the exportation of Hardware products.

Not figures alone show the marvelous spread of American goods—you may hear a cow bell in the Swiss Alps that was made in Connecticut, and many a machete returned this summer to its native land as a grim souvenir of battle. For the machete, which attained such prominence and had such a deadly sound in the newspaper reports of our late war with Spain, has, under its less dangerous English title "cane knife," long figured largely in the invoices of our Cuban trade. American missionaries have carried American goods to strange places and perhaps opened up future markets for our tools and implements; but what has made American Hardware a familiar term the world over is not alone the ambition and enterprise of the American merchant. It is the genius of the American mechanic and inventor.

The common nail offers a characteristic and striking illustration. There were nails before Columbus was born, for nail making is one of the oldest of the handicraft arts, but the art of mechanical nail-making is conceded to be American in both its origin and development.

The nails the colonists brought over were handwrought and necessarily scarce and expensive, as were all articles of manufactured iron. In the early days of Maryland and Virginia, people burned their abandoned houses for the sake of recovering the nails in the ashes; while in the rougher types of buildings, the undressed logs were held together by wooden pins. In New England the thrifty agricultural population turned to nail making by the fireside in the long winter.

Soon, however, in the rapidly developing country, where there were so many wooden structures to be erected, cheap nails became the crying need. Under so imperative a stimulus a machine was invented designed to cut in one process a complete nail from an iron plate. This was a momentous beginning. A series of patents extending from 1775 to 1834 developed a high degree of efficiency in nail-making machinery, and, by numerous stages, perfected the process whose product is universally and technically known as the American cut nail. Truly "the great glory of the Americans is in their contrivances," and no one achievement of American inventors has greater practical value or has contributed more directly to progress than this one little Hardware unit.

For nearly a hundred years the American nail has been alone in the field. Gradually, in the manufacture of nails as in every department of Hardware, steel is supplanting iron, and within the last decade the cut nail has found a rival in the wire nail of French extraction. Many millions of kegs of this nail are now turned out annually by our factories, and it is undoubtedly the nail of the future. But it was the American cut nail which, answering the cry of necessity, played its important if humble part in the "upbuilding" of the nation and is a proud and consistent illustration of Hardware development in the United States.

The statistics of a trade which caters to the necessities rather than to the luxuries of life show as nothing else the marvelous consumptive capacity of this country. Few can realize that it takes annually more than a hundred million tire bolts to keep the wheels of the country going or of iron screws about two and a half billion to keep things together.

The burden of the distribution of these millions rests on the Hardware jobber, a middleman peculiar to American business methods, who carries for the convenience of the smaller merchant a stock which is the accumulation of many factories. Other centers handle their products direct from factory to retail shop; but with us the great distances which separate the local dealer from the industrial centers have made the Hardware jobber a necessity.

The locations of these jobbers become known as centers

* The above very able and interesting article on the Hardware trade of this country, was prepared by William G. Smythe, of the Russell & Erwin Mfg. Co., at the special request of the editor of "The Chautauquan," and appears in the May issue of that magazine. It is numbered among the articles the reading of which is required in the Chautauqua course. Mr. Smythe's long service in the Hardware ranks, and his entertaining style as a writer, make the article one of unusual value and interest.

Digitized by Google

of distribution. The centers of a Hardware distribution in the United States show a firm westward tendency. In the days of imported Hardware the seaport cities were the distributing points which forwarded the Hardware to the whole country, but, with the natural spread of population, and the improved facilities in transportation, the centers of distribution have moved steadily westward and are now represented in the middle West.

In opposition, however, to this progressive westward movement of the distributing centers, the centers of industry for the Hardware trade remain stationary, and now as always, its great manufacturing interests are concentrated in the Northeast, where environment and heredity combine to produce a population adapted to the conditions of hanical labor. Certain localities supply their own specialized needs; California, though not a manufacturing State, makes the canners' tools which prepare for market products of her orchards and fruit farms. The Northwest makes for use in its own grain tracts reaping and harvesting machines. Pennsylvania converts much of her own iron and steel into tools and heavy Hardware before it leaves her borders and has become a very important factor in Hardware production.

But, generally speaking, the industrial centers for the Hardware interest are and will remain in the New England and neighboring States. Manufacturers are obliged to establish their works where they can command skilled labor, and so, though the growth and expansion of the country may take the consumer farther and farther from the source of supply, the industrial center must change so slowly, if at all, that the future of the jobber is assured.

The Hardware jobber or merchant, in addition to his ability to handle many thousands of tons of varied products, must also be past master of the mysteries of Hardware price-making. For in its system of lists and discounts the Hardware trade has a method of business peculiar to itself; a manufacturers' list price being by no means a selling price, but rather the commonly accepted valuation showing relative costs for various sizes and grades of goods. All Hardware manufacturers use the same unvarying list prices on standard goods, and then from these list prices selling prices are quoted by means of a system of discounts. For example: The ordinary tack which in 4, 6 and 8-ounce sizes lists at $1.45, $1.55 or $1.65 per dozen papers, will perhaps be sold "90, 15 and 10" off, till the actual selling price is only a few cents. Many influences have been at work to reduce this established list price to its anomalous position, but it seems an unaccountable mystery to all but the initiated.

Undoubtedly when originally established this list value was the market value, so the widening gulf between list and selling price shows the great diminution in value of all Hardware products. I do not refer to a temporary reduction due to competition and depressed conditions of trade generally, but to a gradual lessening in cost which the years have brought about, the natural and desired result of cheaper material and improved appliances and processes.

The basis of Hardware is principally iron and steel, and the value of the manufactured product bears a direct ratio to the cost of its constituent material. Hence, with the development of the great mineral resources of the country, resulting in increased production of iron and steel and consequent decrease in their values, there has been a corresponding decrease in Hardware values. American iron and steel now compete successfully in the great markets of the world and will eventually give American Hardware, in its manifold forms, a commanding position in the same markets.

Further, it can be said of Americans that they are essentially a machinery-using nation, and in no department of industry has this triumph of machine over man been more marked or conducive to more important economic results than in the manufacture of Hardware.

It has been a long step these hundred and twenty-five years between the patient home nail-maker and the modern nail-cutting machine with its capacity of one hundred to a thousand nails a minute. American impatience and push have accomplished this and many equally valuable labor-saving devices which have been gladly adopted by the American people. Serious riots have followed the introduction of machine power in some of the overcrowded manufacturing centers of old England, but it is characteristic of Americans of all classes to accept eagerly the latest thing.

The machinery of the Hardware factory has steadily advanced in simplicity of form or function and economy of production. There are in common use to-day in the screw factories of Ohio and Connecticut machines that can turn out a perfect screw, thread, head and slot in one process—which obviously means a cheaper article than ever before. And this is typical of the progress in all branches of Hardware manufacture; so that as regards Hardware generally and American Hardware in particular, the necessary result of the cheapening of its two great factors of production, method and material, has been a great reduction in cost.

The manufacture of Hardware involves large and complete factories, and all Hardware nowadays is the product of factory work. Yet there is no such thing in reality as a "Hardware factory." It exists only as a convenient descriptive term. For Hardware is a broad word, and so great is the number and variety of articles included that no one factory scheme, however comprehensive, could possibly absorb them all. A detailed management is the only feasible one, and not infrequently each object must be made the basis of distinct manufacture. And so for greater facility in production we find great plants devoted to the manufacture of agate ware, tools, or builders' Hardware, or content with the single product of drills, screws or files.

Naturally the equipment and methods of manufacture vary with the product. Hand tools, not exacting great power or complicated machinery, are small job work; while machinists' supplies, representing the highest class of machine work, are made in the most modern and best-equipped factories in the world. It is for the manufacture of light Hardware and builders' Hardware that we find the largest and best organized factories, employing the greatest number of hands.

This tendency to specialization in Hardware manufacturing, which after all is the tendency of the age in everything, leads ever to greater improvement in the quality and quantity of the article produced. In its working it trains up a class of skilled workmen, really intelligent machinists, ever on the alert to the possibility of some improvement in the processes and products they know so intimately. Many a Hardware factory to-day is working patents taken out in the name of its foreman or even a man in the ranks.

Our cheap and accessible patent system stimulates every form of improvement. Hardware people have had early and continued advantage of its benefits, since the files of the United States Patent Office record many a triumph of the Hardware inventor and manufacturer. The first patent, though it included much besides, protected the manufacture of "scythes and edged tools," and to this day the best saws are made in America. Also the first steam power applied to manufacturing purposes was tried in a Hardware factory of New Britain, Conn. Each succeeding year has contributed to the number of useful articles covered by the term Hardware till the reports of the United States Patent Office constitute the most complete catalogue of Hardware in existence.

Digitized by Google

This technical catalogue of Uncle Sam's, though a splendid tribute to the American Hardware manufacturer, is not, however, the one on which he relies to advertise and exploit his goods to the trade. Periodically the big manufacturers and merchants get out a classified catalogue of their stuff; a catalogue which has grown from a modest circular to a magnificent volume of over a thousand pages, substantially bound and handsomely illustrated with cuts and half tones. These are freely distributed, so that each Hardware dealer accumulates a valuable trade library, which indicates the range and possibilities of his business. An examination of these catalogues reveals not only in themselves but in the articles they describe, the great artistic improvement in Hardware of recent years.

Most especially is this shown in the department of builders' Hardware. There the nineteenth century has not alone been a century of mechanical progress, for the designs for the "trim" and "finish" of buildings have kept abreast with the changes and improvements in architecture. American architects demand the newest and best in this department of Hardware, and it may be said to be an essentially American branch of the trade, since there is no market outside of the United States for its finest goods.

With us different styles of treatment must each be accompanied by suitable Hardware, whose design, execution and finish are of the best. The presenf prevalence of the French school of architecture, due doubtless to the training of our younger men at the Ecole de Beaux Arts, is reflected in "Touraine," "Marie Antoinette" and "Louis XVI" designs for door and window fittings. Not infrequently, when special effects are desired, the architect designs Hardware as well as house, and the result is in the highest degree artistic and suitable.

The admirable quality of American builders' Hardware is well illustrated in the American door lock of the better class. Its knob and escutcheon lend themselves to the most elaborate treatment. Its mechanism is highly efficient, so that it combines both scientific and artistic excellence.

Perhaps when all is said no Hardware device adds more to the comfort and security of every-day life than the various contrivances for keeping the wrong person out. And in the development of locks American inventors have again an honorable share.

Our forefathers were a sturdy race, but I know they could not carry ten or twelve keys on their person, as most men do to-day. Yet the modern steel lock, with its flat little key, offers much greater resistance to the lock-picking fraternity than did its clumsy iron progenitor of two and three times its size. The American lock is remarkable even in these days for the smallness of its key. Also American in their origin are time locks for safes, where a clock is so combined with the mechanism of the lock that it can only be opened at specified hours, when the clock releases certain bolts and enables the key to do its work. Another interesting development in modern scientific lock making is the making for hotels and institutions of a large number of locks in sets so arranged that while the key of one will not open any of the others, yet there is one key, the master key or pass key, which will open all.

In the manufacture of locks the parts are made by machinery and put together and finished by hand, by a system of piece work where the workman, working under factory supervision, is paid at a fixed price per finished lock.

So much science and art go into the modern lock that it is in this department of Hardware manufacture that what political economists call economy of production is greatest. That is, here the value of the product more than triples the value of the constituent material, whereas in the heavier and coarser grades of Hardware the first cost rarely exceeds twice the cost of the iron or steel consumed.

As to the condition of labor in Hardware manufacturing, it is estimated that the man who works in a Hardware factory, though he handles from 6000 to 10,000 pounds a year, has nevertheless a safe, healthful trade and good wages; wages, which in America are fifty per cent. higher than for the corresponding grade of work in the older countries. His work is usually in some rural neighborhood or smaller city, where his family can be comfortably housed at moderate cost, and in the lighter work of the factory, in tending small machines, and especially in the packing room, there is work for his daughters. With the great improvement in the mechanical part of manufacturing the work of packing becomes relatively more important. Besides everything must be neatly and attractively put up for sale nowadays, so that in some of the big, modern factories, equipped with the latest labor-saving devices, from fifteen to twenty per cent. of the number of hands are employed in the packing room. In this there is a large and congenial field for women workers, though, except on the clerical and office force, women have a smaller opening in Hardware than in almost any other trade.

The Hardware trade is one of the world's great industries and takes prominent rank in the United States. Rich and poor alike require its products, so no town lacks its general Hardware store. In the making and handling of its goods it is a means of livelihood for thousands of American bread-winners. Its factories, with their large number of operatives, support half the population of some New England towns. Its drummers are to be found on every train, and there are Hardware merchants who do an annual business of over ten millions of dollars and conduct great establishments unequalled for size and completeness. The foundations of some of the big fortunes of the country were laid in Hardware; fortunes made great, however, by land and railroad investments. The extent of the Hardware trade in this country is shown not alone by the value of its output, which approaches the fifty million mark, or the number of people it engages, but manifests itself in the number of journals and associations which bear its name. There is more than one exclusively Hardware publication, and what is probably the ablest and best of all trade journals is devoted to the interest of the Hardware trade in the United States.

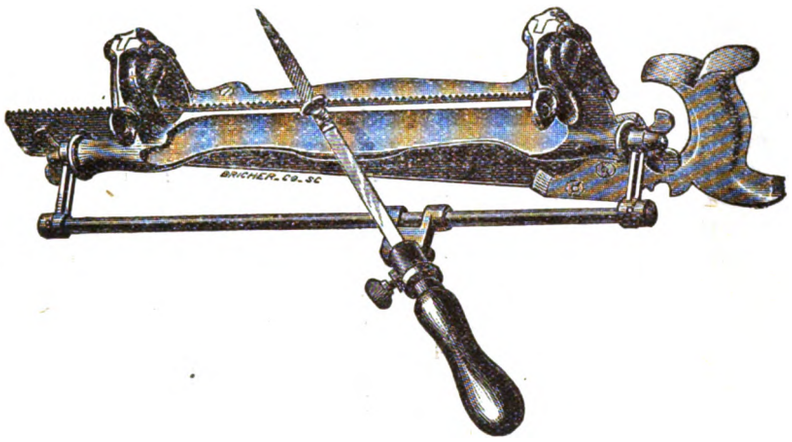
In addition to many local clubs, the Hardware trade has a national association, comprised of Hardwaremen from nearly every State, at whose annual dinner there is always a hearty toast to American Hardware.

WILLIAM G. SMYTHE.

New Cutlery Company.

The Valley Forge Cutlery Co. was incorporated at Trenton, N. J., on the 10th inst. with a capital stock of $50,000. The incorporators are Carl F. Boker, Hans R. Boker, Chas. H. Hawkins, Geo. C. Weaver, Frank C. Wheeler, Edward Grafmueller, Chas. W. Weaver, James Tyler and Wm. E. MacKenna. The company are now building an extensive factory at Newark, and will equip the same with the latest and most improved machinery, and will commence the manufacture of pocket knives at a very early date. Hermann Boker & Co. will handle the entire product of the factory. The officers and directors are:

President: Carl F. Boker.
Vice-President: Geo. C. Weaver.
Secretary and Treasurer: Chas. H. Hawkins.
Directors: Frank C. Wheeler, Edward Grafmueller.



The money in circulation in the United States has more than doubled in the last twenty years, it has increased fifty per cent. since 1886, and more than twenty-five per cent. since July 1, 1896.

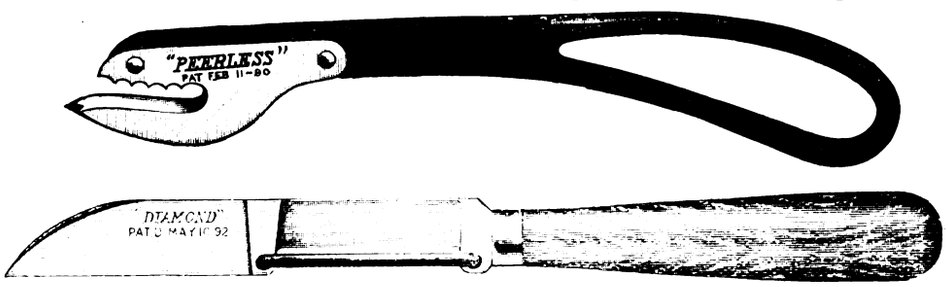
NEW GOODS AND SPECIALTIES.

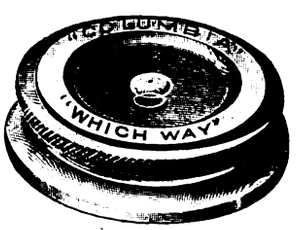


A New Device for Filing Saws.

The Elkins Saw Filer and Clamp, now being placed on the market by A. J. Wilkinson & Co., Boston, Mass., has apparently reduced the work of filing saws to mechanical accuracy. It will be seen from the accompanying illustration to consist of a vise to which is fixed a file handle which moves through guides. The handle is instantly adjustable to any pitch or bevel and when so adjusted moves freely through the guides, assuring the fact that each tooth will be filed the same. In the hands of an experienced filer this appliance will naturally save time and trouble; and it is further claimed to save the files. But the fact that it can be used by the inexperienced with equally accurate effect, makes it additionally valuable as a seller. As it is now being sold at a popular price there should be a good demand for it. Full information as to prices, etc., will be cheerfully furnished on application to the agents.

Schofield Mfg. Co.'s Hardware Specialties.

The Schofield Mfg. Co., John H. Graham & Co., No. 113 Chambers Street, New York, sole selling agents, are placing upon the market an important line of Hardware specialties, including the "Delmonico," "Boston" and "Peerless" Can Openers; "Double Action" Mincing Knives, Diamond Parer and Kitchen Knives, New York Tack Pullers and Alaska Ice Breakers. These goods are all excellent sellers and worthy of a wide distribution. We present herewith an illustration of the "Peerless Can Opener," the sale of which has more than doubled during the past month, and also the "Diamond Parer and Kitchen Knife," which has won its way in the market wherever introduced. Catalogues for these specialties may be had for the asking, and they will be found desirable additions to any stock embracing similar goods.



X-Ray Lemon Squeeze.

The X-Ray Lemon Squeeze is a new article that is being placed upon the market by the Freeport Novelty Co., Freeport, Ill. The form of the same, and the method of its use are so apparent from the accompanying illustration, that no extended description is necessary. It is described by the makers as penetrating, substantial, and cheap. The plunger is of solid aluminum and the auxiliary handle assists materially in the operation. There are screw holes in the base, to fasten it to the table or counter if so desired. Of its operation, the company say: "The weight of the body can be used for power. The plunger is spiral and worms its way into the lemon, allowing the juice to follow the thread to the decline, thus making the drainage perfect. The acid flows from the strainer free from seeds or pulp; little or much can be gotten without pouring. Notice the shifting fulcrum; when the handle is up to receive the lemon the pivots are forward; they are drawn back as the pressure is applied permitting the lemon to adjust itself to the plunger, thus getting all the juice with one squeeze. The weight is two and one half pounds. Will lift out to rinse. Sent to any part of the United States on receipt of price, $1. Liberal discount to the trade."

"Which Way" Pocket Levels.

E. G. Smith, Columbia, Pa., is placing upon the market a number of specialties which possess meritorious features, and prove good sellers. Prominent among these is the "Which Way" pocket level, which has become very popular, an illustration of which we present herewith. It is provided with an accurately ground lens, and is nicely nickel plated and polished. Being about the size of a silver dollar, it can be carried conveniently in the pocket. It is considered much more sensitive than any ordinary level, as it tells in an instant the direction in which the work is out, while with other levels it is necessary to make several attempts before you are certain. Further information will

Digitized by Google

be furnished by request, together with trade prices, by application to the manufacturer.

Ball-Bearing Lawn Mower.

The illustrations shown herewith, show the new Ball-Bearing for use on a lawn mower, for which a patent has been recently granted to that industrious inventor, Thomas

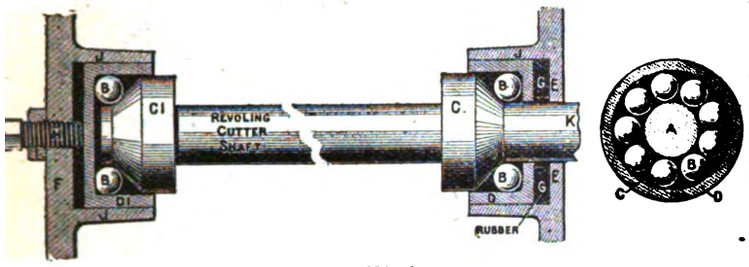


FIG. 1.

Coldwell, president of the Coldwell Lawn Mower Co., Newburgh, N. Y. The ball-bearing is shown in Fig. 1, and its application to the mower in Fig. 2. It is very simple and effective, and its principal feature lies in the fact that it is self-adjusting. It is so built that one set screw adjusts both bearings, and when properly adjusted, is kept so by a simple spring device which automatically takes up all the lost motion in both bearings occasioned by wear. There is, therefore, practically no lost motion in the bearings. When the bearings need adjusting it can be done quickly; that the adjustment is automatic, which when once properly set needs no attention from the operator for a long time; that the bearing compensates for wear

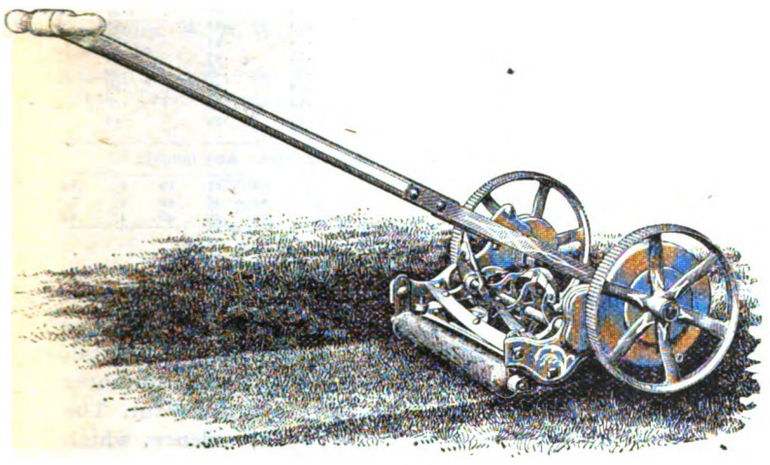

FIG. 2.

and secures a journal that is always free from lost motion, and prevents the revolving knives dropping down upon the lower knife; it does not require an expert to adjust the machine.

William D. Southard, senior member of the firm of Southard, Robertson & Co., stove manufacturers, died at his home, Peekskill, N. Y., of Bright's disease, in his fifty-ninth year. The firm was established in 1835, and Mr. Southard became a member of it at the death of his father in 1861. He was married when he was 21 years old to Emilie Robertson, a sister of Col. George W. Robertson, his partner. Mr. Southard had been a trustee of the village of Peekskill and also president of the village, and was connected with a number of local associations. He was adjutant of the old Eighteenth Regiment of the National Guard.

The popularity of the Walda Sectional Sash Weight, manufactured by the Barney & Reed Mfg. Co., Boston, Mass., is evidenced by the growth of their export trade. Keen competition has taken place in the attempt to secure exclusive rights for foreign markets, and many flattering offers have been received in this respect. The company announce large shipments of their goods abroad; Canada and South Africa each being liberal buyers.

The Texas Jobbers.

The recent meeting of the Texas Hardware Jobbers' Association, is regarded by the members as the most successful ever held by that live organization. It gave evidence that good work was being done in the present, with promise for even better results in the future. Among the visitors present was James J. Mandlebaum, Little Rock, Ark., president of the Southern Hardware Jobbers' Association. The meetings were held in the parlors of the Merchants & Planters' bank, in Sherman, and the citizens o that hospitable place regaled the delegates with a drive about the city, followed by a sumptuous banquet. A number of felicitous speeches were made by W. L. Sanford, of the Roberts, Sanford & Taylor Co., Sherman. J. J. Mandlebaum, Little Rock; Jas. Moroney, of the Moroney Hardware Co., Dallas; and President F. A. Heitmann of F. W. Heitmann & Co., Houston. The delegation were also entertained by Mrs. Kidd-Key, president of the North Texas Female College, by a concert and reception. This feature was, perhaps, the most enjoyable of all.

The following officers were elected:

President, F. A. Heitmann, F. W. Heitmann & Co., Houston.

First Vice President, J. C. Bering, Bering-Cortes Hardware Co., Houston.

Second Vice-President, Walter Tips, Austin.

Secretary-Treasurer, Robert Eikel, Eikel-Breustedt Co., Waco.

Executive Committee: Jas. Moroney, Moroney Hardware Co., Dallas; R. F. Bell, the R. E. Bell Hardware Co., Weatherford; A. P. Duncan, McLendon, Duncan & Co., Waco; W. L. Sanford, the Roberts, Sanford & Taylor Co., Sherman.

The president has appointed the following standing committees:

Transportation: Geo. A. Trumbull, Huey & Philp Hardware Co., Dallas; E. A. Peden, Peden & Co., Houston; W. L. Sanford, the Roberts, Sanford & Taylor Co., Sherman.

Manufacturers: A. C. Goeth, Walter Tips, Austin; Jos. F. Meyer, Jos. F. Meyer & Co., Houston; Jos. Eikel, Eikel-Breustedt Co., Waco.

Grievance: H. Elmendorf, Elmendorf & Co., San Antonio; C. E. Nash, Nash Hardware Co., Fort Worth; H. S. Bettes, H. S. Bettes Hardware Co., Paris.

A Departure in Draw Knives.

Attention is called to the advertisement in another column of A. J. Wilkinson & Co., Boston, Mass., who are placing on the market something unique in draw knives. The improvement consists in the fact that the handles are adjustable to any desired position, and when set are perfectly rigid. The ordinary draw knife is, perhaps, one of the handiest tools to be found in a wood-workers' chest, but frequently its usefulness is stultified by the difficulty with which it adapts itself to corners and other awkward places. This is almost entirely overcome with the knife under consideration, which by a change in the position of the handles can be used in almost any place. Another benefit is that when not in use the cutting edge is completely protected, thus guarding the blade against accident, and the fingers of the user against cutting. When folded it can be carried in the pocket or packed in a very small space. The manufacturers will be pleased to furnish prices and discounts to the trade upon application.

Ye preachers who for cyclers fear,
Because from church they stray
To ride through grove and glen, should hear
What Wadsworth has to say:
"One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the sages can."—*L. A. W. Bulletin.*

New Price Lists in Screws.

Under date of May 10th, the American Screw Co., Providence, R. I., issue a list which cancels and withdraws all previous quotations at variance with the same. They call attention to the new price lists and changes in discounts for rivets, adopted May 10th, and to the changes in discounts on tire, sleigh-shoe, stove and sink bolts and stove rods, adopted March 24th.

The Rogers Screw Company.

The Rogers Screw Co., Providence, R. I., the formation of which has already been mentioned in our columns, has been fully organized with the full subscription of capital. The officers elected so far are Olney Arnold II, treasurer and secretary, and Henry R. Rogers, superintendent. The plant of the Diamond Machine Co., of Providence, which is said to be up to date both in construction and equipment, has been chosen as the scene of the new operations, which will in a few months, we are informed, actively begin. The officers of this company promise that their goods will be fully equal to the best that are made. Mr. Arnold will sail on June 7th on the steamship *Britannica* of the White Star Line for Europe, where he expects to spend a few weeks on the continent.

Neal & Brinker, No. 168 Church Street, New York, have accepted the agency for the Holland Mfg. Co., Baltimore, Md., manufacturers of wire nails and tacks of every description, glaziers' points and double pointed tacks, roll paper holders, etc. It is the intention of this progressive firm to carry a well assorted stock of the goods of the above company; and inquiries regarding the same will meet with a prompt response. As the Holland Mfg. Co. are "outside of the combination," their New York agents hope to enjoy the benefit of this new connection.

Edwin Woodward, Wilna, Ohio: I inclose $1 in payment of my subscription to *Hardware*. I think I have taken it since about the first volume. I note some very nice letters about your Anniversary Number, and I think the issue is entitled to the praise. Indeed, in appearance it is equal to the illustrated magazine in many particulars, and superior in some. I am glad to give you a deserving word of commendation.

Southern Jobbers' Association.

The indications are that when the members of the Southern Hardware Jobbers' Association meet at the Hotel Islesworth, Atlantic City, N. J., on June 14th, they will meet a fair contingent of guests from the North. They have certainly come half way, by selecting a point in New Jersey for their gathering; and the result will surely be an increased attendance of visitors from this section of the country.

The invitation has certainly been generous. The manufacturers and jobbers of the North have already been invited, and now comes an additional card which includes two large and influential classes—the salesmen and the ladies. President James J. Mandlebaum says: "In our behalf, kindly extend to your salesmen, both in the house and on the road, an invitation to our annual meeting. They will find a hearty welcome and we believe the attendance at the convention will prove beneficial to them. We would also add that many of our members and guests will be accompanied by ladies, and we would recommend all those who contemplate going to Atlantic City to our meeting, to bring the ladies with them. Atlantic city is a very inviting spot and they would very much enjoy the trip."

The following is the full official programme prepared for the forthcoming Meeting.

Wednesday, June 14th.

Meeting called to order by the president. Calling of roll. Address of welcome by the president.

Address of welcome to the manufacturers. Chas. H. Ireland, Greensboro, N. C.; Odell Hardware Co.

Response: W. R. Walkley, New York City; Peck, Stow & Wilcox Co.

Annual address of the president. Report of Reception Committee. Informal reception manufacturers, guests and jobbers.

AFTERNOON SESSION.—Executive.

Wednesday, June 14th.

Reading of minutes of 1898 Convention.
Report of secretary-treasurer.
Report of transportation committee.
Report of grievance committee.
Report of manufacturers' committee.
Report of membership committee.
Report of executive committee.
Appointment of special committees.
Communications.
Miscellaneous business.
Opening of question box.
General discussion.

MORNING SESSION.—Thursday, June 15th.

Joint session of jobbers, manufacturers and their representatives.

Addresses by manufacturers: "Our Export Trade." W. H. Matthai, Baltimore, Md.; National Stamping & Enameling Co.

Addresses by jobbers: "Hardware Expansion." Cliff E. Speer, Fort Smith, Ark.; Speer Hardware Co.

"Associations and their effects." T. W. Gathright, Birmingham, Ala.; May & Thomas Hardware Co.

Addresses by manufacturers' representatives: "The Medium." V. C. Moore, Atlanta, Ga.; V. C. Moore & Co.

Address by representative of National Hardware Association.

Impromptu addresses by representatives of other Hardware jobbing associations, guests and members.

AFTERNOON SESSION.—Thursday, June 15th.

Executive.

"How shall we meet foreign competition and secure the trade of our legitimate territory?" W. L. Sanford, Sherman, Texas; Roberts, Sanford & Taylor Co.

Retrospection.
Prospection.
Opening of Question Box.
General Discussion.

MORNING SESSION.—Friday, June 16th.

Joint session of jobbers, manufacturers and their representatives.

Addresses by manufacturers:

"A General Talk." Geo. H. Barbour, Detroit, Mich.; Michigan Stove Co.

Addresses by jobbers:

"Equity as it Should Exist Between the Manufacturer and Jobber." R. C. Carson, Charlotte, N. C.; Charlotte Hardware Co.

"Are Trusts Necessary Under Existing Circumstances, and are They Detrimental to the Jobbers' Interests?" John Donnan, Richmond, Va.; W. S. Donnan & Co.

Addresses by manufacturers' representatives:

"Our Prosperous Country." C.T. Boynton. Chicago, Ill.; American Steel & Wire Co.

Introduction and addresses by representatives of the press:

"My Friend the Business Man." Jas. H. Kennedy; editor *Hardware*, New York.

"XXth Century Progress." Daniel Stern, president *American Artisan Press*, Chicago.

"The Development of the Southern Hardware Trade." W. H. Wilson; manager Tradesman Publishing Co., Chattanooga,

"The Trade Journal as a Developer of Closer Commercial relations between the Jobbers and Retailers.' W. S. Hemby; editor *Iron and Steel*, Chicago.

"The General Progress of the South." R. H. Edmonds, editor *Manufacturers' Record*, Baltimore.

"The Beneficial Results from Associations:" R. R. Williams, Hardware editor *Iron Age*, New York.

AFTERNOON SESSION.—Friday June 16th.

Joint session of the jobbers, manufacturers and their representatives.

Open discussion on the following questions suggested by the executive Committee:

1st. "How can the buyer do justice to himself and please all the traveling salesmen who come to sell him?"

2nd. "Can a manufacturer sell a jobber and retail merchant in the same territory and conserve both interests?"

3rd. "The difficulties in the way of maintaining uniform prices for the year 1899 and best methods to obviate them."

4th. "Should manufacturers of standard brands of goods sell their products to catalogue houses and department stores?"

5th. "If a traveling man cannot place his line in a city, has he the privilege to go to the consumer to sell his goods?"

EXECUTIVE SESSION.

Miscellaneous business.
Reports of special committees.
Election of officers.
Selection of place for next annual convention.
Adjournment.

C. E. Jennings Co's. New Location.

The C. E. Jennings' Co., by their removal to No. 101 Reade Street, New York, are able to fit up complete sample rooms showing to the fullest extent the important lines with which they have so long been identified; being on the level of the street will be found a great convenience to their many customers in this city and surrounding points of trade activity, for the furtherance of whose interests their house has always been made a headquarters. Fine and artistically displayed sample boards under glass, will be one of their principal attractions, and a good pick up stock will be carried for convenience of nearby customers; but all stock orders, or special requisitions, will be forwarded to factory and shipped promptly and complete. Private offices are provided for the members of the company, and signs of increasing prosperity and greater utility are visible on every hand. A new catalogue is in course of compilation by the company which they hope to publish very soon.

New York State Jobbers.

The regular meeting of the New York State Association of Hardware Jobbers was held in Utica, N. Y., on May 18th. There was a good representation of members. It was decided that the next meeting should be held in Buffalo on September 21st. At the close of the business meeting, the members and guests were entertained at dinner at the Fort Schuyler Club, their hosts consisting of Wright, Dana & Co., and Charles Millar & Son. Henry W. Millar acted as toastmaster, and speeches were made by President Charles H. Turner, George E. Dunham, of Utica; Howard Davis, of the American Tin Plate Co.; Hobart Weed, of Buffalo; J. W. Black, of Syracuse, and others.

"We persuaded our married daughter to move back from the country."

"Didn't she like it out there?"

"Yes; but she was always coming into town just when we wanted to go out to visit her."—*Exchange.*

REVIEW OF THE MARKETS.

Hardware: The same reports as to trade conditions come in from all parts of the country. Sales are better than in May last, says Davenport. Business is good, says Minneapolis. Trade continues good, says Portland. There is no lull in trade, adds Cleveland. Orders are coming in as fast as we can take care of them, is the report from Chicago. We are too busy to write, says the man at Columbus. Trade is good, is the verdict of Pittsburg. The volume of trade holds up, says the man from Kansas City. And so it goes all over the country. While all these leading jobbers report themselves busy, there comes also the gratifying announcement that there is little cutting of rates, and that the dealers seem inclined to get what they can out of the advances, and not pass it along to another. Here in the East, at least, they are working in closer harmony than ever before, and in New York City the newly-formed local association must certainly have a good effect in this direction.

The rush toward combination is not quite so violent as it was, but the full rush of the tide has not yet been reached. The promotors are very busy, endeavoring to bring various interests together, but the public at large does not seem quite so enthusiastic as of old.

Advances in prices still go on, and the prices of raw material go up. The increase of our export trade, and other indications, show that these prosperous days are something more than a mere boom. The careful man endeavors to take advantage of all his opportunities, but does not feel inclined to go insane, and rush in with his eyes shut. There are plenty of legitimate chances, without tying up to balloons.

Wire Nails: No change in these goods has been made since our last report, so that present quotations are as follows: f. o. b., Pittsburgh; to jobbers in carload lots, $2.10; to jobbers in less than carload lots, $2.12½; to retailers in carload lots, $2.20; to retailers in less than carload lots, $2.30. New York quotations are as follows: To retailers, carload lots on dock, $2.35; to retailers, less than carloads on dock, $2.50; small lots from store, $2.60.

Cut Nails: The Cut Nail market shows a little change; business continues in a very satisfactory manner and the prices referred to in our recent issue as agreed upon are fully sustained. New York prices may be quoted as follows: Carload lots on dock, $2.05; smaller lots from store, $2.20.

Smooth Wire: The prices on this product are as follows:

To jobbers in carload lots	$1 95
To jobbers in less than carload lots	1.97½
To retailers in carload lots	2 05
To retailers in less than carload lots	2.15

Binder Twine: The market for binder twine remains substantially the same as last reported, and we quote as representing current quotations the following:

White Sisal, 500 feet to pound	9½ cents
Standard, 500 feet to pound	9½ "
Manila, 600 feet to pound	10¼ "
Pure Manila, 650 feet to pound	11 "

Prices are for carload lots, f. o. b. Eastern factories. An advance of ¼ cent per pound is charged in less than carload lots.

Cordage: The market on Manila and Sisal Rope is without active interest, the business being nominal and prices the same as previously given. We quote as follows:

Manila, 7-16 inch and larger	per pound,	9¾	cents
" ⅜ inch	"	10¼	"
" ¼ and 5-16 inch	"	10¾	"
Sisal, 7-16 inch and larger	"	8½	"
" ⅜ inch	"	9¼	"
" ¼ and 5-16 inch	"	9¾	"
" Lath Yarn	"	8¼	"

Prices are for carload lots, f. o. b. Eastern factories. For ess than carload lots the customary advance of ¼ cent is charged.

Hinges and Butts: The Stanley Works, New Britain, Conn., and New York, announce under date of May 22, an advance in prices which on hinges is fifteen per cent., and ten per cent. on such butts as are changed at all. These figures are as follows: Hinges. Light strap, 70 & 10. Heavy strap, 75 & 5. Corrugated heavy strap, 75 & 5. Light T, 65. Heavy T, 70. Extra heavy T, 70 & 10. Corrugated extra heavy T, 70 & 10. Hinge Hasps, 55. Long Chest, 55. Butts, Nos. 800, 802, 804, 806, 808, 810, 814, 816, 818, 820, 854, 66⅔. Butts: 828, 829, 830, 832, 834, 836, 838, 840, 842, 844, 70. These are subject to an extra of 10 to 15 per cent.

The McKinney Mfg. Co., Allegheny, Pa., have issued a statement under date of May 20, as follows:

"We give you below our discounts on Bright Steel Butts and Strap and T Hinges. We carry a large stock, filling orders on sight. and shall be pleased to serve you."

BUTTS.
Discounts apply to List of April 1, 1895.

Class No.	Discount.
700	66⅔%
703	66⅔%
704	66⅔%
705	66⅔%
707	66⅔%
709	66⅔%
711	66⅔%
713	70, 10 & 10%
714	70, 10 & 10%
715	70%
717	70%
719	70%
721	70%
723	70%
724	70%
725	70%

HINGES.
Discounts apply to List of March 15, 1898.

Light Strap	70 & 10%
Heavy Strap	75 & 5%
Light T	65%
Heavy T	70%
Extra Heavy T	70 & 10%
Long Chest	55%
Hinge Hasps	55%
Crate Hinges	70 & 10%
Crate Hasps	55%

Screws: On a page elsewhere in this issue will be found the revised discount sheet issued by the American Screw Co., Providence, R. I. This covers the changes in discounts for rivets, adopted May 10th, and the changes on Tire, Sleigh Shoe, Stove and Sink Bolts and Stove Rods, adopted March 24th.

Staples: Still another advance has been made by the associated manufacturers of staples, poultry netting, blind clinch, electricians', &c. The prices on these goods are now as follows:

	Discount. Per cent.
Poultry Netting	85 and 5
Blind	80 and 10
Spring	80 and 10
Clinch	80 and 10
Hook	80 and 10 and 10
Electricians'	80
Wire Cloth, in bulk	80
" " in papers	90 and 5

Hollow Ware: Yet another advance in stove hollow ware has been announced. The present prices are as follows: Terms sixty days, or 2 per cent. discount for cash in ten days; ground, 65 per cent. discount; unground, 70 per cent.

Double-Pointed Tacks: The manufacturers of double-pointed tacks have made an advance on these goods, which are now quoted in small lots at a discount of 90&5 per cent. and in bulk at a discount of 80&10 per cent. It is surmised that quite an abundance of these goods is still in the hands of the jobbers.

Carriage Bolts, Machine Bolts, etc.: There is difficulty in obtaining goods in these lines, and the market is therefore held very firm, the recent advances made in these lines being maintained.

Enterprise Sad Irons: The Enterprise Mfg. Co. of Pa., Philadelphia, announce under date of May 22d, that their discounts are 20, 5 & 5, instead of 30 & 5, as heretofore quoted.

Potts' Irons: W. H. Jacobus, No. 90 Chambers Street, New York, announce the following changes in prices of "Potts'" Irons, either japanned or tinned tops. Nos. 50, 55, 60, 65, per set, 77, 72, 81, 76 cents. Orders for 120 sets are subject to a rebate of five cents per set, and freight allowance. Small orders are shipped f.o.b. factory.

Linseed Oil: Dean Linseed Oil Co., under date of May 19: In lots less than 5 barrels, 44 cents per gallon; in lots of 5 barrels or more, 43 cents per gallon. The five-barrel price only applies to deliveries of that quantity at one time.

Digitized by Google

Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 58 cents per gallon.

THE PORTLAND TRADE.

Trade in Northern New England continues good, although collections are very slow. The retailers have evidently made up their minds that the present conditions are sure to exist for a long time to come, and that prices are as low as they will be, at least in 1899.

When the advances in raw material are considered, we think most of the manufacturers are very conservative in the amount of advance they are asking on their goods.

We think it is the part of wisdom for both jobbers and retailers to put their usual legitimate profits on the costs of the goods they are selling, based on to-day's market; otherwise if they give away the advantage they now have, they may be caught and lose the legitimate returns that should come to them. If the jobber has to stand the declining market and base his prices on costs that have depreciated, he certainly should take advantage of every advancing market, to keep even.

Prices in New England are well maintained, and we do not hear of any serious cutting.

EMERY-WATERHOUSE CO.

THE MINNEAPOLIS TRADE.

There is nothing particularly new; business is good as a whole; advantage is being taken of the advances, although nails are suffering somewhat through one party here making prices that are not justified by present costs. It is rather a difficult proposition. We don't feel like meeting his price openly, and if we meet it only when we have to, the shopper gets the advantage as compared with regular customers who expect to pay market prices.

The season is backward; we have had a week or ten days of rather cold weather for this time of the year; have recently had some rain that was needed; in some parts of the Red River Valley, they have had too much rain, which has prevented seeding, but do not think it is so to any great extent.

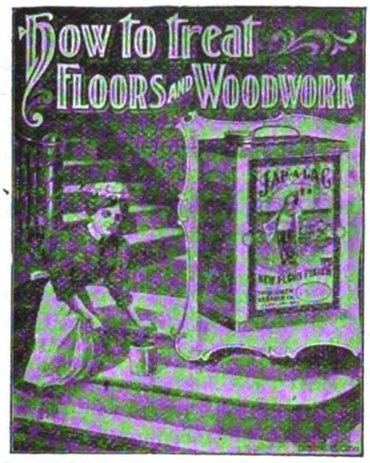
There is considerable building going on and quite a scarcity of men,—carpenters in particular. We expect excellent business from now on. W. K. MORISON & CO.

THE DAVENPORT TRADE.

Zinc mining in Missouri is attracting much local interest, and a number of Davenport companies have been formed for the purpose of developing and operating zinc mines and so far these investments have proven exceedingly lucrative. There seems to be more profit in mining and manufacturing than in jobbing zinc at the present.

An effort is being made to utilize the natural water power furnished by the Mississippi River rapids at this point. The idea is generally believed to be practicable.

The plant of the Sylvan Steel Co. has been acquired by the Republic Iron & Steel Co. The indications are that it will continue to be operated. We sincerely hope and trust it will.



Sales for the first half of May were larger than last year, and collections were better.

SICKELS, PRESTON & NUTTING CO.

THE CLEVELAND TRADE.

There is no lull in trade. Everything is running on high pressure. Pessimism is being strangled in its attempt to find reasons for existing. Emerson says: "The fiend that man harries is love of the best," so that the disposition to find fault comes from discontent, making peace without perfection impossible. This may make crank grumblers benefactors. The great changes so rapidly taking place require alertness to keep in the swim, and not be left at the station with the train gone.

Everything is scarce but money. The last presidential campaign was run by one party to make more money: the opposition succeeded, and it resulted in accomplishing this

on the very opposite basis. Politicians are now in great perplexity to find the platform that they dare promulgate. Over capitalization will compel municipalities to assume control of quasi-corporations, and if the States will levy taxes based on the capital stock, it will prove the David's sling with which to slay the giants.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CHICAGO TRADE.

Our greatest difficulty the past two weeks has been to procure seasonable goods in the way of lawn mowers, galvanized netting, screen doors and wire cloth.

This week, however, we have been fortunate enough to secure seven car-loads of doors, netting and wire cloth, and of painted cloth we now have an assortment of all the leading widths, so that we have been able to accommodate several of our competitors with moderate quantities and still preserve a fairly good supply for our retail trade, and if the call is not too much greater than former years, we expect to fill the requirements of our customers for both wire cloth and netting throughout the season.

We have been served to-day with a notice of an advance of $1.20 per dozen on Mrs. Potts' nickel sad irons, and since writing you last time have been forced to advance edged tools, all kinds of hollow ware, ground, unground and enameled, all tinware with copper bottoms, sheet zinc, oilers, washboards, brass faucets, sheet steel, hoop iron, wrought steel brackets and many of the smaller articles in shelf Hardware.

Collections have been quite good the past thirty days, and orders for goods are coming to us about as fast as we can take care of them and give satisfaction by making prompt shipments.

Prospects for a good trade through the early summer are quite flattering. WELLS & NELLEGAR CO.

THE KANSAS CITY TRADE.

The volume of trade holds up very well indeed. We are busier than we anticipated. Collections are fair. Very cool weather has greatly helped us in wire cloth and screen door stringency.

We are now in fairly good shape along these lines, and with the possible exception of one direct carload shipment of doors, we will fare better really than last year.

Our customers have learned that few of our competitors have been better fixed than we were for wire cloth, etc., and as a consequence largely quit their howling. How strange it is that the average customer who wants a thing very badly, when it is scarce, long before he needs it, can tell you that so and so have had their goods six weeks, etc., when you personally know better in some cases, and doubt it seriously in others. Thus it is that the average customer "swipes" the wholesaler, and threatens to buy on the "open market" and "charge you back the difference,"

Digitized by Google

etc., even without the semblance of equity, legality or good sense in his bluster.

The winter wheat crop is lighter this year than for two years past in Kansas, but this will be more than compensated in the largest apple crop ever grown.

And Kansas, by the way, furnishes the apples for H.R.H. Victoria, Empress of India.

Later on Kansas apples and Missouri malt will occupy vacant places in the ex-royal paunches of the "nobles" in the Philippine Islands.

Emperor "Bill" may shut out our hogs, but he can never stop these Western fruits. They have a flavor all their own that royalty must recognize.

The merchant in the Hardware business has a field all his own nowadays. One good feature, in a bad sense, about the "trust price" is that the merchant can add more than his increased cost if he wants it, and simply lay it to the "trust." And then the other fellow he will "lay" for the trust, and later on you may look for something to be hatched out.

We have had a very cool spring and possibly a cool summer is ahead of us, but politically speaking we believe in an "allfired" hot hereafter.

In a general way we may mention that prices are very steady. Not every one has advanced to the high top notch prices we find, because large unfilled contracts will have their influence and the less fortunate jobber must suffer some from these things. And our opinion is that in a general way jobbers must be governed by such conditions. To undertake to ignore them is folly, no matter how much disposed one would be to avail themselves of the better prices one would like to obtain.

With this issue this correspondent severs his connection as the writer of these letters.

He expects very shortly to return to the "road," much to his real pleasure, and certainly to his gain in ease of work and gain in health.

Some other may take his place as correspondent whose "effusions" will be more nearly the style of the "trade letter" which is best appreciated.

Wishing each and all of the handsome, bright and cheery gentlemen represented in the annual a very happy and contented future, permit the writer to bid you farewell.

GILLE HARDWARE & IRON CO.

THE COLUMBUS TRADE.

We are too busy to write Hardware letters. We are busy filling orders with goods that we can get, and spend considerable time writing our customers explaining why we cannot ship certain goods, but they keep after us just the same, insisting that we ship goods that we haven't got and cannot get. We like plenty of orders, but when we haven't the goods it is enough to drive a man to drink (water). Manufacturers make promises only to be broken and claim they cannot get material. It looks as though orders were booked by manufacturers for goods now in season, and the ore to make the iron from is still in the everlasting hills. We are in no worse shape than our competitors, and on some goods not as badly off as some jobbers. Only a few days ago a dealer said he had an order out for wire cloth that was given November last, and he had not received a single roll yet. It was a cold day, but he was plenty warm enough without a fire; and the jobber who had the order was simply roasted alive. It is certainly a very unfortunate condition in which the trade finds itself on certain goods, but there seems to be no remedy. Lawns used to be mowed with scythes, and can be mowed that way again, if necessary, or they might borrow a cow and turn her in and let her mow the lawn and trim up the "posies." They would be sure of "two-lips" as long as the cow was there at any rate. There are strong indications of goods advancing where they are not already advanced. Business is good and collections improved.

SMITH BROS. HARDWARE CO.

THE PITTSBURG TRADE.

Trade is good in Pittsburg. Jobbers are pushed to the limit and working nights to keep up. This is not unusual during the Spring months, but fifty per cent. increase on last year's business indicates the moving of a good many goods, despite the advanced prices. There are a few complainers at the new prices, but in general we find it easier to get orders now than at the extreme low figures of last year.

Many jobbers as well as retailers find themselves short of serviceable goods, the factories not being able to get material to work on. Those who supplied themselves with their full season stock early are fortunate.

All our manufacturing interests are pushed to their utmost. Voluntary advances have been made in many workers' wages and no man who wants work need be idle. This makes business for the retail stores, as the purchasing capacity of their customers is increased.

The reorganization of the Carnegie Co. is the matter of most interest at present. Millions seem to be as easily handled as thousands a few years since, and there may be a chance for the public to take shares in the "greatest steel plant on earth."

It is rumored that the entire coal mining industry of this section is to be consolidated.

LOGAN GREGG HARDWARE CO.

THE ALBANY TRADE.

The saying "No news is good news" holds good at the present time. Contentment appears to light up the countenance of the jobber who bought early and has a good stock to draw from. Good times appear to have materialized at last, though it may have come slowly in this section, it arrived and we trust will remain for a long time. Those

who remained in at the finish, instead of dropping out of business during the depression are sorry "I don't think."

Orders are coming in freely and hurried out as speedily as possible with "back orders as brief as can be expected."

The scarcity of some goods among manufacturers turns business to the jobbers whose warehouses are groaning with the heavy stock they are loaded with.

Revised prices are well maintained, some exceptions, of course, being noticed. And is it wise to "cut" in view of future propsects? Conservative people look for a firm market for a long time to come and the consolidations that are still going on are omnious and confirm these views.

Collections have improved and there is less complaint in this department. ALBANY HARDWARE & IRON CO.

THE BALTIMORE TRADE.

There is perceptibly no change in the class or volume of goods moving since our previous letter, and collections remain about the same. A number of items have recently made further advances, such as carriage, machine and other bolts, steel butts, strap and T hinges, etc., which have been compulsory on the part of the part of the manufacturers owing to the rapidly increasing value of the raw material.

All welded trace chain interests are about to be consolidated and in a few weeks the steel and iron sheet mills will likely display a very strong affinity for each other or perhaps a sisterly affection for the rod mills.

From present indications the day to first witness the complete absorbtion or control of all the iron and steel industries of this country will soon dawn and the most useful of all metals can proudly feel that it controls more capital than any other, and has the largest stock company on earth engaged in transforming it into all manner of things for the defense, necessities and delight of mankind.

We would suggest to our friends handling stove pipe and elbows, that it might be well for them to anticipate their wants in this line, and should certain weather predictions come true the demand for the coming season will be large.

With a market like we've had since the first of the year, it could hardly be expected that uniform prices would be maintained, but through the influence of the National Hardware Association and the untiring efforts of its very popular secretary-treasurer, Mr. T. J. Fernley, we believe all the Hardware jobbers will gladly co-operate by adhering firmly to the selling prices that have or will be established by the manufacturers and approved by said association for the retail trade. H. W. WEBB & SONS.

THE GRAPHITE INDUSTRY.

Our general manager remarked one morning this week, "We have two months ahead for a certain line of goods, and it's hard to tell how we are going to catch up."

Of course we will and do catch up—but it takes everlasting hustling.

Then he criticised the purchasing department for telegraphing for supplies, or rather for allowing supplies to run so low as to necessitate such haste. It was explained that written orders were not quick enough, and supplies went into stock faster than certain raw material could be fur-

nished—and so it goes—nip and tuck between supply and demand.

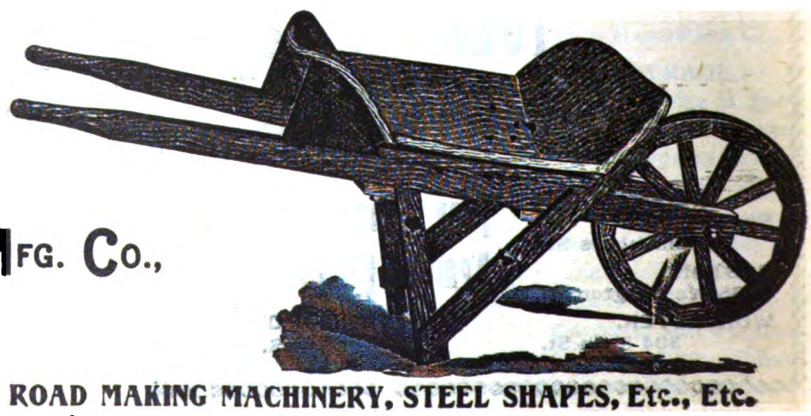
We are too busy now-a-days to sing, whistle or slap each other in a congratulatory way on the back. We just let the work go on, and hope it will never let up—so long as it does not curtail individual summer vacations.

Vice President John A. Walker, sailed for Europe on the 23d, for a six weeks' rest and recreation—but he will probably do a pile of work before he returns, as the Dixon is popular abroad, and representatives are waiting to do him honor, and at the same time convince him of the possibilities for the future.

By the way, if your readers run into the Electrical Show at Madison Square Garden, don't fail to visit the Dixon Exhibit, with its big sign that flashes like a lighthouse, and John H. Baird, who is in charge, will make it extremely pleasant for them. The souvenirs he gives away are interesting, and Mr. Baird has a very taking way, and is such an all round good fellow that they will remember the Dixon while they may forget a great many other things.

JOSEPH DIXON CRUCIBLE CO.

Merchant & Co., Inc., Philadelphia, New York and Chicago, report in their smelting department an active demand for their Iridium Anti-Friction Metal. This is described as "a peculiar alloy of the Babbitt Metal class, which is very much like the famous Parsons English mixture which has been used in heavy machinery and steamship work for a great number of years. The above firm, after extensive experiments and tests, put this mixture on the market a number of years ago, and time has only given full proof of its merits. It is coarse grained, very white, light and extremely tough material which is equal to brasses in its endurance and anti-frictional qualities, but which can be much more easily used as it can be melted in the ladle and poured into the boxes, instead of being cast and filed to fit as is necessary with brasses." This company sells every grade of Babbitt Metal, but gives the advantage of their long and extensive experience in this line to their customers in supplying them with the grade and character of Babbitt Metal that their wants require.



A combination chart in colors is the latest production of the J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill. It is several feet in length by one in width, and is artistic in the highest degree. Under the heading, "The Hardware Merchant's Dream Realized," are shown both in black and colors, samples of Warren's patent glass front drawer sectional Hardware shelving. In the colored portions, the natural woods are shown, with its backgrounds of cabinets displayed in red. These are accompanied by descriptions, sizes, prices, etc. Any Hardwareman who contemplates the fitting up of a new store, or the renovating of an old one, should send for this chart before taking a step further.

We learn from the Nicholson File Co. that the "File Filosophy," notice of which was made in these columns upon its publication two months ago, has proved so popular that a second and much increased edition is rendered necessary. The little book has been sent to thousands of machinists and file users throughout this country and abroad. Treating as it does of files and how to use them, it proves invaluable to anyone interested in that class of tools. All those who have not secured a copy would do well to get one. They may be had free upon application to the company's head office in Providence, R. I.

An easy way to clean a chimney of soot has been discovered by a Maine man. Instead of going to the top of the chimney and probing with rods, he begins at the bottom. There an opening is made, and he fires upward a revolver, charged with a blank cartridge. The concussion, it is said, will clean out the soot. He also claims that the burning of a piece of zinc in a stove will clear the stove and its funnel of soot.—*The Tradesman.*

"Condit Pattern" Refrigerator Door Fastener.

M. H. Hickey & Son, No. 375 Market Street, Newark, N. J., have for fifteen years been the manufacturers of the well-known Condit refrigerator door fasteners which have previously been marketed under the name of the original patentee, he having retired from business. Messrs. Hickey & Son, as will be noticed by their advertisement on page 37, intend continuing the manufacturing of the same at the old address. Possessing every facility for making prompt shipment of all orders, they solicit the confidence of the trade hitherto given to their predecessors. The "Condit" pattern fastener has been a most salable article of its kind, as it is estimated upwards of a million have already been distributed through the trade.

There is a momentary halt in the proposed peanut trust, and also in the coffin combination. Everything else is going through swimmingly, and before long the manufacturing establishment that still preserves its identity, will be eligible for exhibition in a dime museum.

As we journey forward the happiness of existence is enhanced by our expectations; hope is sunlight; despair is darkness.—*Exchange.*

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Charleston, S. C.—Strohecker & McDermid, No. 287 King Street.

Eureka, Mich.—Will Wright has entered into partnership with Walter Burk in the Hardware business.

Huntsville, O.—C. P. Bigley.

Niagara Falls, N. Y.—The Walker & Patterson Co. has been incorporated to carry on a general Hardware and plumbing business; capital, $25,000. Directors—Raymond M. Walker, Thomas H. Patterson, and William P. Baker, Niagara Falls.

Norfolk, Va.—The Henry Walke Co., general Hardware and supply business. Capital, $100,000. Incorporators: Richard Walke, Robert D. Parrott, Jr., Henry W. Seabury, W. F. Walke, L. W. Tazewell, C. W. Grandy, W. W. Hunter, all Norfolk; Thos. Pinckney, Morristown, N. J.

Rippey, Iowa.—Redfield & Dickinson.

St. Marys, W. Va.—E. T. Martin.

Changes and Improvements.

Brooklyn, Iowa.—C. W. Leonard, Hardware, succeeded by Leonard & Drake.

Canton, Pa.—Lindley, Ronan & Co., Hardware merchants, have moved into their new store in the Lewis Block. The store is 113 feet deep and has a frontage of 20 feet, and contains a commodious department in the rear for stoves, ranges, glass, paints and oils. There is a large display window in the front, and the store is well lighted throughout with incandescent lights. The interior woodwork is of Southern pine, natural finish, with plain bronze trimmings. Trolley ladders extend along both sides of the store, making the upper shelves easily accessible. An elevator affords communication with the basement, which is large and well arranged for the storage of surplus stock. On the west side of the store there are large glass display cases, fitted with nickeled utensils, and on shelves are displayed the tinware and the numerous articles for household use. Opposite are more display cases containing mechanics' tools, and then come shelves and drawers well filled with light Hardware.

Central Lake, Mich.—Fisk Bros., Hardware, succeeded by Carl Stroebel.

Clarksville, Tenn.—The large wholesale and retail Hardware establishment of Elder Bros. is to be merged into a corporation and made exclusively a wholesale business. The names of the incorporators are M. W. Elder, James L. Glenn, Sr., James Hanratty, James L. Glenn, Jr., John M. McDonnell, John J. Conroy and Charles A. Welch.

Columbus, O.—The Kilbourne & Jones Hardware Co. are having built a new wholesale warehouse at the corner of Park and Chestnut Streets, and expect to occupy it with a full line of wholesale Hardware about the first of June.

Dover, N. J.—The shipping room and Hardware store of the George Richards Co., on Sussex Street, is to be torn down and a three story brick structure erected in its place. The new building will be erected around the frame structure and when the brick walls are completed the ones now standing will come down.

East Greenwich, R. I.—W. J. Starr, Hardware, etc., succeeded by W. G. Browning's Sons.

Elizabethton, Tenn.—The Elizabethton Hardware Co., sold out.

Fairport, N. Y.—Charles Stenner will remove his stock of Hardware into the Eldridge block.

Fargo, N. D.—P. L. Pritchard succeeds Adams Bros. in the Hardware business on the east side of Broadway, where he has a full line of Hardware, shelf goods, stoves and tinware.

Fitzgerald, Ga.—The Paulk Hardware Co. have broken ground for a handsome three-story brick business house and plans are drawn for two more buildings to be erected at once.

Flycreek, N. Y.—H. E. Jones is having an addition extended on the rear end of his Hardware store. He will also enlarge his stock of goods this spring.

Freeport, Ill.—Hackett & Lichtenberger, Hardware, succeeded by the Hackett Hardware Co.

Galesburg, Ill.—M. L. Gebhardt & Co., Hardware, succeeded by the Willis Hardware Co.

Grand Forks, N. D.—Barnes & Nuss are remodeling their Hardware store on Third Street and are adding new stock of the very latest in the Hardware line.

Grand Rapids, Mich.—Wm. Vandermade, Hardware, succeeded by Frank L. Bean.

Great Bend, Kans.—G. N. & E. R. Moses, Hardware, succeeded by E. R. Moses.

Harvey, Ill.—Ranger & Hilbish, Hardware, reported to have dissolved partnership.

Irwin, Pa.—Poellot & Robinson having decided to locate in Freedom, have commenced moving their Hardware stock. A building is being erected for the firm and they will occupy it in about six weeks.

Kinston, N. C.—B. W. Canady, Hardware, succeeded by B. W. Canady & Co.

La Fayette, Ind.—John Lannert, Hardware, succeeded by Lannert & Smith.

Leaf River, Ill.—P. T. Sprecher, Hardware and harness, succeeded by Chas. T. Schelling.

Marion, Ind.—Swanger & McClain, the Hardware dealers and plumbers, have purchased ninety-four feet of the Burr Sweetser property, fronting on South Washington Street. It is their intention to erect a business block at once to be occupied by themselves.

Warsaw, N. Y.—The Hardware firm of Higgins & Webster has been dissolved, Mrs. Higgins withdrawing. William E. Case has become associated with William E. Webster and the business will be conducted by them under the firm name of Webster & Case.

Wayland, N. Y.—Snyder & Co., a new firm from Livonia, have purchased the Hardware business of George E. Whiteman & Co.

West Acton, Mass.—The co-partnership heretofore existing between Wallace L. Maynard and Richard H. Nichols under the firm name and style of Maynard & Nichols, has been dissolved by mutual consent. The business is to be continued by Richard H. Nichols.

Wheeling, W. Va.—George Walthers, the Hardware dealer, is having a new front put in at his store on Belmont Street.

Wichita, Kan.—Mr. Rowlee is enlarging his Hardware store on North Main Street by extending fifty feet in the rear. The tin shop will occupy the rear part of the building and the partition of the storeroom will be moved back.

Wilkesbarre, Pa.—Morgan's Hardware store will remove from West Market Street to No. 32 South Main Street, the store now occupied by S. E. Cohen, on Broadway. The U. S. Racket Co. will occupy No. 68 South Main Street, on the opposite side of the street.

Willow Lake, S. D.—W. W. Haight and Henry L. Hart have purchased the Hardware store of M. C. Theisen.

Business Embarrassments.

Anderson, Ind.—The store of the Barnes Hardware Co has been closed by the sheriff.

Auburn, Ind.—John L. Davis, Hardware merchant, has made an assignment. Liabilities, $19,000; assets, $160.

Springfield, O.—Donnelly & Wood, Hardware dealers, have assigned. Assets, $6,000; liabilities not given.

Burglaries in Hardware Stores.

Boonville, Kans.—H. L. Hudson & Co., $400.

Huron, Kans.—James Little, $150.

Independence, Mo.—Hill & Martin, cutlery.

Kindred, N. D.—C. J. Meyer, cutlery.

Lorain, Ohio.—W. C. Atten, $100.

Painted Post, N. Y.—Orr & Smith, $200.

Waterford, Pa.—R. B. Smith, $50.

West Superior, Wis.—Wm. C. DeLong, razors.

Fires in Hardware Stores.

Corfu, N. Y.—Palmer & Wagner's Hardware store has been destroyed by fire. Loss, $6,000; fully insured.

Leonard, Tex.—The Hardware stock of Braly & Simmons has been destroyed by fire.

Middlesex, N. Y.—The Hardware store of Brandow & Son has been destroyed by fire. Loss, $5,000; insurance, $2000.

Newton, Ind.—The stock of Kipp & Mellott, Hardware and implements, has been destroyed by fire. Loss, $4000.

Prescott, Ark.—The stock of the Prescott Hardware Co. has been destroyed by fire. Loss, $11,000; insurance, $5500.

Sandy Hill, N. Y.—Nicholson's Hardware store has been destroyed by fire.

Winston, N. C.—The Winston Hardware store has been damaged by fire.

New York, N. Y.—The E. Lothar Schmitz Co. has been incorporated to manufacture Hardware. Capital stock, $10.000. Directors: E. Lothar Schmitz and H. G. Ramsperger, New York City; Henry Roethel, Greenpoint.

Portland, Me.—The American Heating & Lighting Co.; to use, manufacture, cleanse, buy, sell, and deal, in all kinds of machinery heating and illuminating apparatus, gasoline, oils, implements, mantels, shades, builders' and manufacturers' Hardware; laundry implements, and to do a general forging, annealing, soldering, machinists, manufacturing, foundry, laundry and tinsmith business; to manufacture under patent rights all kinds of machinery and other implements. Capital stock, $500,000; paid in $100. The officers are: president, Frank M. Davis, of Cambridge, Mass.; treasurer, Chas. F. Pinkham, of Boston.

Changes and Improvements.

Chicago, Ill.—The Garden City Wire & Spring Co., and the Bancroft Charnley Steel Co. have been consolidated under the name of the Garden City Wire & Spring Co., and certified to an increase of capital stock from $5000 to $200,000.

Cincinnati, O.—The Rahn & Meyer Machine Tool Co., now located at No. 216 Pearl Street, are erecting a two-story brick building on Spring Grove Avenue and Beard Street. The building extends on Spring Grove Avenue fifty and on Beard Street one hundred and fifty feet. The firm will manufacture fine machine tools and will employ about one hundred men at the start. They will be doing business by July first.

Des Moines, Ia. — Arrangements have been practically completed for the removal to this city from Bussey, Iowa, of the Acme Mfg. Co. It is expected that the change will be made during the summer season and that the company will be established in its new quarters by fall. The Acme Co. are engaged in the manufacture of wheelbarrows, rakes, snow shovels and woodenware articles. They have been located at Bussey for some years and have a well established business. At present the company have a paid up capital of $10,000, but this is to be increased to $20,000 upon the removal to this city, and Des Moines parties have subscribed for a considerable portion of this new capital.

Lebanon, Pa.—The National Bolt, Nut & Rivet Works, of Reading, and the Lebanon Iron works, have consolidated, and will be operated under the charter of the Lebanon Iron Co. They have a capital stock of $700,000. Additions will be made to both plants, the local works being enlarged for the manufacture of the heavier lines of bolts, nuts and forgings, and the Reading plant for the manufacture of certain lines.

Lynchburg, Va.—The Lynchburg Hardware Mfg. Co., have purchased the Dean foundry property, and will remove the plants recently acquired to this point.

Lynchburg, Va.—The Lynchburg Plow Works have been sold to a New York syndicate. The present capital is $40.000, and it is the intention of the purchasers to double the capacity as soon as practicable.

Monessen, Pa.—The Paige Woven Wire Fence Co., of Adrian, Mich., are moving their wire fence factory to this place. The firm employ six hundred men, and expect to double their force when they move into their new quarters.

Port Jervis, N. Y.—Jennings & Griffin of the saw factory, are arranging to begin the manufacture of saw handles. This department of their factory will be equipped with up-to-date machinery, and is expected to employ twelve or fifteen hands.

Recent Fires.

Boston, Mass.—The New England Screw Co., damaged by fire.

Montreal, Can.—Fire broke out in the shops of H. R. Ives & Co., Hardware manufacturers, Queen Street, a few days since. About fifteen hundred dollars' worth of damage was done in the half hour or so the outbreak lasted. The fire started in the japanning shop. Mr. Ives states that business will not be interfered with by the fire, and the burned part of the building will be restored at once.

Miscellaneous.

Chicago, Ill.—The organization of the American Steel Hasp Co. has been perfected by the election of the following officers and directors: President, C. S. Guthrie; first vice-president, C. A. Painter; treasurer, F. S. Wheeler; secretary, F. L. Clark. Directors: C. S. Guthrie, C. A. Painter, George E. Painter, Veryl Preston, W. E. Taylor, R. M. Gilbert, W. T. Graham, F. S. Wheeler, D. G. Reed, W. E. Reese, Henry Wick, J. H. Moore, W. H. Moore, W. B. Leeds and J. J. Tracy.

Ilion, N. Y.—The Remington works have just received an order for 32,000 rifles for the Mexican Government.

Lebanon, Pa.—The management of the Pennsylvania Bolt & Nut Works have made the following promotions and changes in their general office: Assistant secretary, J. Wheeler Lord; general sales agent, Harry A. Wagner; chief bookkeeper, George B. M. Deer; purchasing agent, George S. Bowman; chief order clerk, Daniel G. Scott; pay clerk, Benjamin Ruth.

Syracuse, N. Y.—The Syracuse Chilled Plow Co. have received their first order for plows to be sent to Cuba. The order called for forty plows and the shipment will be made in a few days. The regulation plow will be sent.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Allegan, Mich.—Temporary organization of the Allegan Cycle Co. has been made and the following officers have been elected: President, Chas. L. Barrett; secretary, Lewis Thompson; treasurer, Fred. I. Chichester. There are twenty stockholders at present. The wheel to be manufactured will be called the "Whirlwind."

Baltimore, Md. — The Baltimore Ball Bearing Co. has been incorporated by John W. Woodland, James Woodall, Ralph S. Jackson and William D. Allen, for the manufacture of patented novelties. Capital stock $150,000.

Calais, Me.—MacCready Bros. have opened a bicycle store.

Chicago, Ill.—C. White has opened a bicycle store at No. 9359 Cottage Grove Avenue.

Chicago, Ill.—The Simpson Cycle Spring Co. has been incorporated by Fred L. Boruff, C. B. Coffien. Capital stock, $25,000.

Cleveland, Ohio.—The Weaver & Carpenter Mfg. Co. has been incorporated by Harrp F. Weaver, Aloin M. Carpenter, O. L. Neff, R. R. Kaufman, F. H. Weaver, all of Cleveland. The concern is capitalized at $25,000, and will manufacture bicycles.

Denver, Col.—The Kneible Cycle Co. has been incorporated with a capital stock of $2000.

Dexter, Me.—F. W. Parsons, Hardware, sporting goods, etc., has opened store.

Elizabeth, N. J.—Henry C. Squires & Son has been incorporated by Henry C. Squires, G. Harry Squires and Frederick C. Marsh, manufacturers of sportsmen's supplies. Capital stock, $100,000.

Keyser, W. Va.—T. H. Davis has opened a bicycle store.

Little Falls, N. Y.—The H. P. Snyder Mfg. Co. has been incorporated by Titus Sheard, Homer P. Snyder, Frank Senior and Jessie F. Snyder to manufacture bicycles, etc. Capital stock, $30,000.

Memphis, Mich.—B. Barton has opened a bicycle store.

Montevideo, Minn.—L. Eldrid has opened a bicycle store.

Newark, N. J.—The International Vehicle & Mfg. Co., principal office, No. 788 Broad Street, to manufacture bicycles, etc. Capital $2000. Incorporators: R. L. Coleman, Fred J. Stimson and Theodore F. Merseles.

Newark, N. J.—The E. W. De Bow Co. has been incorporated by Edward W. De Bow, Alonzo B. Frasee and George W. Houghland, to manufacture pneumatic tires, etc. Capital stock, $50,000.

Newport, R. I.—Henry L. De Blois, Hardware, sporting goods, etc., has opened new store.

New York, N. Y.—The Union Steel & Chain Co. has been incorporated under the laws of Delaware by W. F. Caney, E. L. Harper and Maurice S. Doran. Capital stock, $60,000,000; half common and half preferred.

Peshtigo, Wis.—O. Nelson will open a bicycle repair shop.

Portland, Me.—The Concord Rubber Co. has been incorporated by John G. Robinson, Louis H. Schroeder and Dana B. Paul. Capital stock, $50,000.

Rutherford, N. J.—Tallman & Son have opened the store formerly occupied by Lew Chapman, as a bicycle store. With them will be associated Elwood Waller, and under his personal direction all repairing will be done.

St. Johnsville, N. Y.—E. Fox is building a bicycle repair shop on Washington Street.

Vancouver, Wash.—Crawford, Marshall & Co. have opened a bicycle store.

Winsted, Conn.—The Universal Mfg. Co., organized under the statutes of Maine, and manufacturers of chainless bicycles and mechanical devices, will settle in this town and a large factory will soon be built, capable of employing several hundred hands. The company is capitalized at $150,000.

Changes and Improvements.

Asbury Park, N. J.—Mark Guy & Co., bicycles, reported to have dissolved partnership; Mark Guy continues.

Chicago, Ill.—The Griffin Wheel Co. has increased capital stock from $1,500,000 to $3,000,000.

Dividing Creek, N. J.—Major Ingersoll has had his bicycle shop removed and put up near the school house.

Flushing, N. Y.—Mr. Lopath, of the firm of Leek & Lopath, bicycle dealers at Washington and Union Streets, has withdrawn from the concern. In future the business will be conducted by George Leek.

Greenwich, Conn.—Charles J. Ferris, bicycle dealer, has been succeeded by Ferris & Lally.

Indianapolis, Ind.—A. N. Anderson's cycle store has removed to No. 612 First Avenue S.

Jackson, Mich.—H. A. Christy & Co., manufacturers of bicycle saddles, one of the allied interests of the Spalding Mfg. Co., have begun the removal of their extensive plant to Harvey, Ill.

Lancaster, N. H.—W. L. Rowell, Jr., bicycle repairer, has sold out to F. Stebbins.

Lansing, Mich.—The Capitol Electric Co. will be reorganized with additional capital for the purpose of manufacturing a bicycle vise patented by Paul Theodore, of the Michigan Agricultural College.

Oswego, N. Y.—Smith, Van Horne & Co., Hardware, sporting goods. etc., will retire from business at this place.

Peekskill, N. Y.—Philip Vought, sporting goods, reported to have gone out of business.

Philadelphia, Pa.—Magee & Young, bicycle dealers, succeeded by William Young.

Washington, D. C.—Jones & Fellows, bicycle dealers, have dissolved partnership, Harry A. Fellows retiring. The new firm will do business under the name of R. C. Jones & Co., and will collect all outstanding obligations and assume all liabilities of the late firm.

Williams, Iowa.—Edward Ripley has sold his bicycle business to A. W. Ross.

Winnebago City, Minn.—A Milne & Co., Hardware, sporting goods, etc.; stock purchased by H. N. Welch & Co. The store will be thoroughly refitted and enlarged.

Recent Embarrassments.

Buffalo, N. Y.—Edward J. Rose, proprietor of the sporting goods establishment of E. J. and G. M. Rose, at No. 512 Main Street, has filed a voluntary petition in bankruptcy.

Chicago, Ill.—John Featherstone's Sons, bicycle manufacturers, have made an assignment. No schedule filed.

Chicago, Ill.—B. Harris & Co., dealers in bicycles and bicycle sundries, have filed an assignment for the benefit of their creditors, naming Hugo W. Wightman as assignee. The assets are estimated at $25,000, and the liabilities at $15,000.

Recent Fires.

Buffalo, N. Y.—Fire broke out in the plant of the Speedwell Bicycle Mfg. Co. some days since, and before it was extinguished the building had been damaged to the extent of $3000, and the stock as much more. The building is situated at No. 1286 West Avenue. The stock was insured for $5000.

Chicago, Ill.—The sporting goods stock of Thomas H. Doane, No. 233 Monroe Street, has been damaged by fire to the extent of $1500.

Millville, N. J.—Thomas & Miller, bicycle factory, slightly damaged by fire.

Milwaukee, Wis.—G. Schmidt's bicycle works, at No. 795 Twelfth Street, have been damaged by fire.

Milwaukee, Wis.—Fire in the factories of the C. J. Smith & Sons Co. resulted in a loss of from $18,000 to $25,000; the brazing and annealing shops being destroyed, together with a large quantity of stock. The company manufacture almost exclusively bicycle parts.

Niles, Mich.—The building occupied by the Michigan Bicycle Cement Co. has been destroyed by fire. The loss is estimated at $3000.

Ottawa, Ont.—Joe Mutchmore, bicycles, at Hull, destroyed by fire.

Penn Yan, N. Y.—Ward Ellis, bicycle repair shop, destroyed by fire.

Miscellaneous.

Rochester, N. Y.—The officers chosen by the stockholders of the Bicycle Supply Co., which was recently incorporated, are: President, George C. Whipple; vice-president, William Hawley; secretary, Thomas Leahy; treasurer, George W. Aldridge. The company is to manufacture the "Never Creep" bicycle tire, which promises to be a boon to bicyclists. It is the intention to erect a plant in this city to manufacture the tire.

Store To Let.

CORNER STORE in new building in the upper part of Bayonne, N. J. This is a good stand for a crockery and household furnishings store. Moderate rent. For particulars inquire P. O. BOX 195, Hoboken, N. J.

Hardware Business For Sale.

HARDWARE business for sale, thirty-five miles from New York City. Chance for an energetic man. Price low. Satisfactory reasons for disposing of same. Address H. O. G., P. O. Box 2383, New York City.

COMPLETE up-to-date Hardware stock and fixtures, inventorying $4500, in a thriving town of 3000 inhabitants. Best location. Tinning business in connection, and fine opening for a plumber. Good chance for an active man. For sale cheap. For particulars apply to R. W. WHINFIELD, Burlington, Wis.

A COMPLETE stock of Hardware, saddlery, stoves and tinware. Business well established in a live town and prosperous country. Address A. B. C., care HARDWARE, No. 143 Chambers Street, New York.

Agency Wanted.

MANUFACTURERS' AGENT, with well located store in machinery district in New York, would like to hear from manufacturers wanting a reliable representative; have an established trade and years of experience. Address GEO. W. CHURCH, No. 183 Greenwich Street, New York.

Foreign Agency Wanted.

A GENTLEMAN with large experience and with good connection in all the principal towns in Newfoundland, is prepared to undertake additional agency in Hardware trade; good testimonials and references from firms represented. Address GEO. B. PARSONS, P. O. Box 331, St. Johns, Newfoundland.

Agency Offered.

AGENTS wanted to handle Burr's Cushion Stroke Adjuster, greatest wind-mill attachment ever invented. Quick seller, and liberal commission. BURR-FESLER CO., Batavia, Ill.

WE would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, No. 143 Chambers Street, New York.

WANTED agents to handle a patented, labor saving device of universal sale; investigation solicited by men who desire quick returns from a legitimate, profitable business. Address (C) BURR MFG. CO Cleveland, O., 823 Society for Savings.

PROPER Clothes Line Reel; simple, strong and durable; needed at every home. A money maker for agents. BURR-FESLER CO., Batavia, Ill.

Attention, Salesmen!

SALESMEN on uncovered ground can add hose, tires and full rubber line. Free samples. Cash commissions. Protected ground. One salesman earned $3900 in 1898. MINERALIZED RUBBER CO., New York.

Attention, Manufacturers!

FIRMS contemplating going into the enamelling business or wishing a new formula to enable them to add to their present lines in one or two coated ware, are invited to correspond. Highest references. "EXPERIENCED ENAMELLER," care HARDWARE, No. 143 Chambers Street, New York.

"IN YOUR COLUMNS FROM THE FIRST."

Van Wagoner & Williams Hardware Co., New York and Cleveland. [*Hinges, Anvils, etc.*]: Having been represented in your columns almost from the first issue, we have a feeling of pride and pleasure in your achievements.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

"WE HAVE FOUND 'HARDWARE' OF USE."

Putnam Nail Co., Neponset, Boston, Mass. [*Horse Nails*]: We have found HARDWARE of use in disseminating truths in regard to the Putnam hot forged and hammer pointed nail.

"HAS OUR ESTEEMED FAVOR."

Edward Darby & Sons, Philadelphia, Pa. [*Wire Goods*]: For the past few years we have been in HARDWARE, and we beg to remind you that it has our esteemed favor, and will recommend the same to anyone desirous of a good, useful, common-sense trade journal such as HARDWARE is.

"HAVE FOUND YOU VERY USEFUL."

Alfred Field & Co., New York. [*Cutlery, Guns, etc.*]: We can say in all sincerity that we have found you very useful, and we can most cheerfully recommend you to our friends in the trade.

"RESULTS ARE SO SATISFACTORY."

Capewell Horse Nail Co., Hartord, Conn. [*Horse Nails*]: We have been liberal advertisers in your journal for years, and the results are so satisfactory that we expect to be much more liberal for many years to come.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

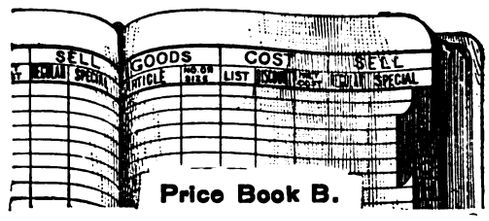
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



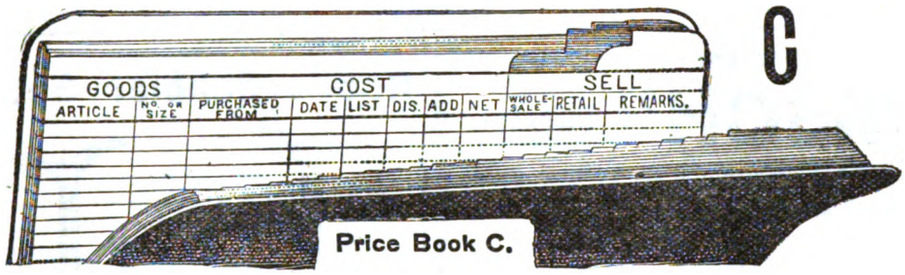
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

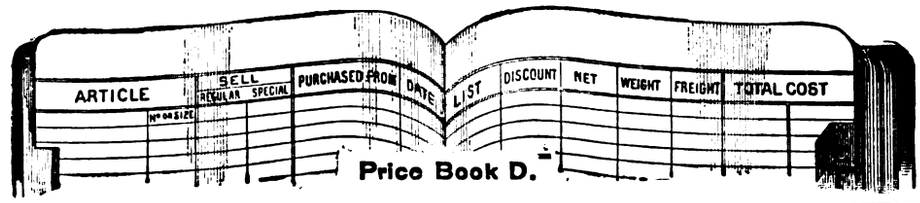
B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 400 pages with flap, 1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***

FOUR EDITIONS:



C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

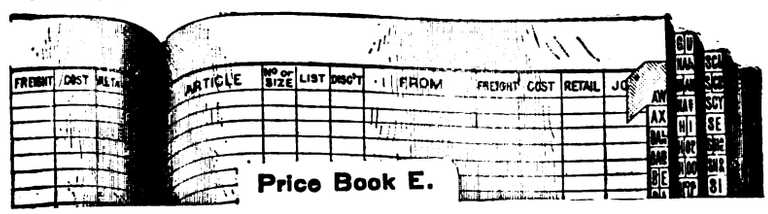
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2 50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU
" Parers, Apple " PAR
For Chisels, turn to CHI
" Cutlery, " CUT
For Iron, turn to IRO
" Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.
